2-in-1 Chrome Piston Rings were installed.

Solid chrome plating on the oil and top compression rings eliminates tedious breakin periods—assures double life for cylinders, pistons and rings. Also, 2-in-1 is the only piston ring set containing NORMAL and Hipressure springs to meet every condition of cylinder wear.

For positive oil control and sustained power for thousands of extra miles, insist on Perfect Circle's 2-in-1 Chrome Piston Rings in your engine.

PERMATEX FORM-A-GASKET. SEALS About Everything!

Used by auto manufacturers and mechanics everywhere!

Now take that cooling system for instance. Anti-freeze costs real dough...so why let it drip away through leaky hose connections and drain plugs. Seal them with Form-A-Gasket. It's sure because it resists all types of anti-freeze solutions as well as gas, oil, hot and cold water. Keep Form-A-Gasket handy in your workshop as an all-purpose gasket and pipe-fitting compound.

3 TYPES for your convenience

No. 1 sets quickly, dries hard. No. 2 sets slowly, is non-hardening. Aviation No. 3 is a brushable liquid that sets to a paste. All three make leakproof, pressuretight seals in threaded, hose and flange connections.

THE POWER THAT CAN GET YOU ANYTHING IN LIFE YOU WANT!

Whatever you want in 1953 — a new home, a happier marriage, a healthy state of mind and body, a better job, more money — here is a remarkable method for turning your desires into REALITIES:

THE MAGIC OF BELIEVING

(The Science of Setting Your Goal - and then Reaching It)

by Claude M. Bristol, writer, lawyer, lecturer

This unusual book shows you how to put your inner mind to work—how to utilize the power of your subconscious mind to help you overcome obstacles and succeed in whatever you want to accomplish.

Here in the secret of what women call intuition—religious leaders call revelation—gamblers call hunch—top executives call personal magnetism. "The Magic of Believing" shows you:

- How you can win success by working loss hard than you do now.
- · New belief makes things happen.
- How to get what you want easily through a process of making mental pictures.
- How to use "the low of suggestion" to step up your offectiveness in everything you do.
- How to let your imagination find the ways and means of pushing obstacles aside for you.
- · How to use proven techniques that focus your efforts and insure success.
- * How to project your thoughts and turn them into achievements.

Hard work alone will not bring success. Mr. Bristol shrawdly amphasises. He shows you how you can harness

Here is Proof That "The Magic of Believing" Brings Practical Results!

"I got a job I have been wanting and trying to get over a year." -D. M. Eade, Englewood, Calif.

"Inspired my wife and self to enter local skill contest and win first prize of \$1,500 mink cape—out of 21,000 contestants!"

-K. C. Stavener, Gardena, Calif.

"An exceedingly practical analysis of the technique of mental power . . . a guidebook to success."—Mrs. R. Bondarant, Portland, Ore.

"It's a grand book . . . and promises to do an unlimited amount of good for all who read it." - Ted Malone, noted radio artist.

"This book is magic! Startling and instantaneous results seem to follow every chapter. Truly one of the best investments I have ever made."—Mrs. J. F. Olsen, Duloth, Minn.

Send coupon to get your free examination copy!

the unlimited energies of your subconscious mind, and make use of it in practical ways to obtain the things you want and to become what you would like to be. Here are some of the common-sense pointers this book offers for getting the things you want:

- 1. Den't reach for the moon. If you're coming \$7,500 new and want more, begin by sheeting for \$10,000 or \$15,000.
- Sustained concentration is difficult, so use the 3 mechanical devices the book recommends to keep your subconscious constantly reminded of your goal.
- 3. Dan't put off decisions. Make them for hotter or werse, and act on them.
- 4. Forget the post, Leave your subconscious free to deal with today's problems,
- 5. Steer clear of negative thinkers. Their pessimism will seep through to you in the same way your confidence communicates itself to others.

You can put this powerful force to work for you at once. In just 10 days you will begin to see how this semarkable method can change your entire life! This is the "extra brain" that worked for Edison when he conceived the electric light while he slept; that plots the novels of famous novelists, like Louis Bromfield; that solves the problems of America's top executives. As it works for them, it can work for you! It will reveal to you what steps to take; what decisions to make; who to see; what to say; when and how, "The Magic of Believing" can enable YOU to turn ideas into riches; dreams into reality; failure into success.

Read this remarkable book 10 days free.

CRACK DOWN ON MONEY

You can have more money for things you need—
a better job—bigger responsibility—congratulations and praise by letting I.C.S. train you to succeed instead of standing still

Do you find it tougher every month to come out even on your budget? Bills piling up? Never enough cash to go around? Everything going up but your income?

The way to get rid of those worries for good is to make more money. And you can do it!

Look around you. The men who are getting ahead are trained men. They've learned special skills that bring them higher pay. It's the men without training who are standing still.

What are you going to do about it? Just wait and hope for something better to come along? If you really want to make good, you can get the necessary training by learning at home in your spare time.

What I. C. S. Con Do for You-Help you qualify quicker for a better job, bigger pay. Give you new self-confidence. Save you time and expense. Help you master the essentials with no out-of-date or unnecessary material to study. Keep your employer informed of your progress (if you wish).

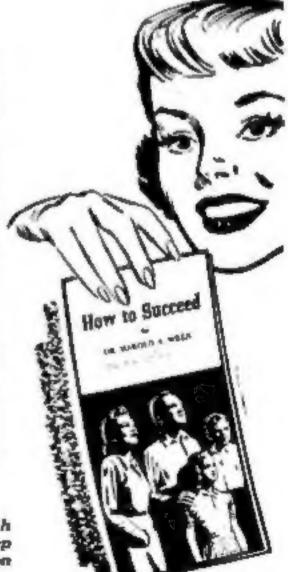

Why I.C.S. is Best for Yes-I.C.S. offers 391 success-tested courses, 1559 different texts. I.C.S. texts are used by the U.S. Armed Forces Institute, Marine Corps Institute, Coast Guard Institute, as well as by colleges and universities. I.C.S. courses are used by 3327 businesses and industries to train employees. I.C.S. has spent six million dollars keeping texts up to date.

Advantages of i.C.\$, Method-You earn while you learn-no time lost "going to school." , You study in your spare time at work, at home or in between. You set your own pace-never hurried or held back by others. You study

when convenient — no missed classes due to illness, business or social engagements. You get individual, personalized instruction, corresponding directly with your instructor.

Big I. C. S. Difference—I. C. S. gives you the bedrock facts and theory, plus practical application. You learn the why and the wherefore. No skimping. Instead of just becoming good, you become expert with an expert's knowledge of the fundamentals. This is the big difference between I. C. S. and other teaching methods.

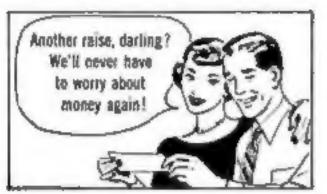

Five Reasers for Mailing Cospon—(1) It brings you two free books by return mail. (2) It puts you in touch with the world's largest training school. (3) It proves to everyone (including yourself) that you are determined to make good. (4) It starts the pattern that has led thousands to richer, fuller lives. (5) It costs you absolutely nothing—nor are you obligated in any way.

FREE BOOKS)

"How to Succeed." 36 pages packed with worth-while success tips. Step-by-step plan of action. Also training handbook on subject you check in coupon.

WORRIES!

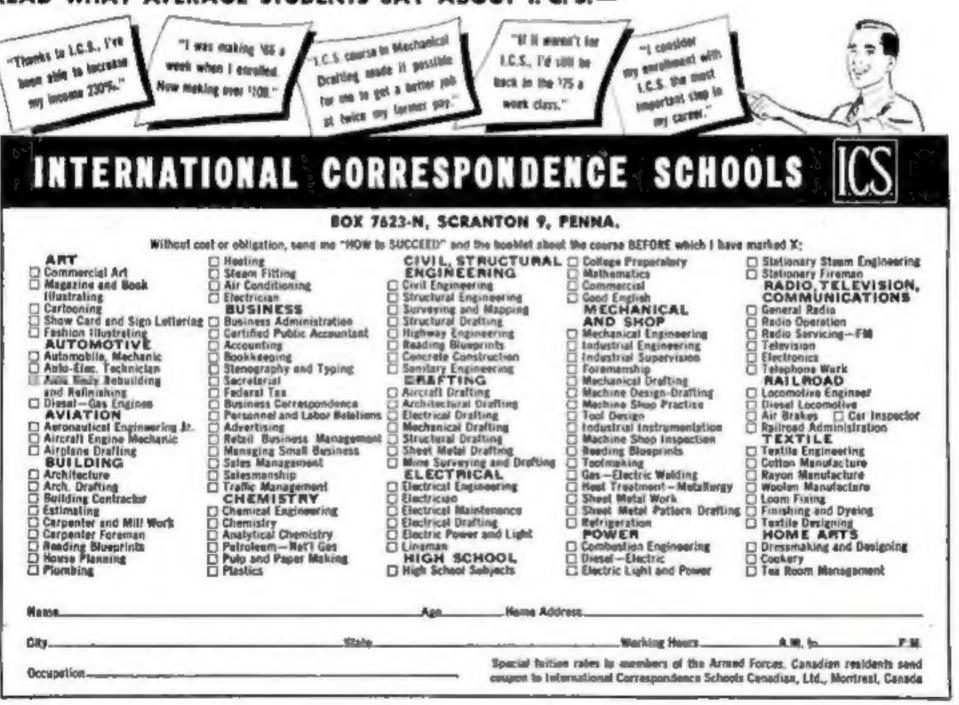

International Correspondence Schools offer you a course in practically any field you choose, giving you the practical plus the bedrock facts and theory. You earn while you learn. Students report better jobs and more pay within a few months.

Look over the famous coupon below. Pick out the career that interests you—one that can lead you to an interesting, rewarding future. Then mark the coupon and mail it. I. C. S. will send you two free books—a training handbook complete with information about the field you check (outlook, qualifications, how to enter, etc.)—also the 36-page guide to rapid advancement, "How to Succeed." Find out what I. C. S. can do for you!

Man or woman—young or old—whether you make \$20,000 or \$2000 a year—I. C. S. can help you! Start the new year right. Mail the coupon today.

INVENTORS

Learn how to protect your invention. The U. S. Patent Laws provide that any new and useful art, machine, article of manufacture, or composition of matter, or any new and useful improvement thereof, may be patented if the act of invention is involved. Therefore, every inventor with a valuable invention should take advantage of the Patent Laws and proceed for patent protection in order to safeguard his rights.

A patent gives the inventor the exclusive right to prevent others from making, using, or selling the invention claimed in the patent for a period of seventeen years.

The Patent Laws were enacted for the benefit of the inventor to give him protection for the features of his invention which are patentable. These features must be properly and concisely set forth and claimed in a formal application for patent, in order to comply with the requirements of the Patent Laws. For that reason, unless the inventor is familiar with patent matters, he should engage a competent registered patent attorney or agent to represent him. We are registered to practice before the U. S. Patent Office and are prepared to serve you in the handling of your patent matters.

A specially prepared booklet entitled "Patent Guide for the Inventor", containing detailed information with respect to patent protection and procedure, together with a "Record of Invention" form will be promptly forwarded to you without obligation upon request.

CLARENCE A. O'BRIEN & HARVEY JACOBSON

32-A DISTRICT NATIONAL BUILDING WASHINGTON 5, D. C.

Nonstop Driver Reports

I was extremely pleased by your careful report on our coast-to-coast nonstop run [PS, Nov. '52, p. 174]. Our only troubles were a burned-out coil and condenses and defective fuel pumps. We simply switched to the emergency units and kept rolling.

Police escorts usually wanted to take us through their towns at 60 m.p.h., but we flagged them down, explaining we were on an endurance run, not a speed test. We cooked some food in the car, and ordered the rest by radiophone from restaurants ahead. It was delivered by obliging police cars.

People turned out to watch us everywhere, and many cars followed us from one town to another. Next year I plan a 14,000mile nonstop trip from Mexico City to Alaska.

LOUIS MATTAR, San Diego.

\$13,000 Ferrari Is Too Cheap

As Western representative for Ferrari, I was embarrassed by an erroneous price of \$13,000 quoted for the Le Mans Ferrari in your August issue [p. 74]. As soon as the

article appeared, I received a call from a potential customer in San Francisco who said my price of \$15,500 f.o.b. New York was far in excess of the advertised price . . . George Joseph Jr., Denver, Colo.

Our apologies to Mr. Joseph. The PSM reporter (himself the proud owner of a '49

Plymouth) was so awestruck by what he understood to be the correct price of \$13,000 that it never occurred to him he could have got it too low.

Incidentally, in the same issue we ran a story about the Rolls-Royce Silver Dawn explaining why it cost \$10,000. This presents an interesting comparison: the \$15,500 Fertari develops 250 horsepower and tips the scale at 1,847 pounds; the \$10,000 Rolls puts out about 125 horsepower and weighs in at 4,200. Thus the Italian speedster costs \$8.39 per pound vs. the Rolls' \$2.38. However, if it's horses you're after, the Rolls sets you back \$80 per horsepower, the Ferrari only \$62... Just can't make up our mind which automobile is the thriftier buy

He Can Weld, Too

How about some more articles like "How I Learned Arc Welding" [Sept., p. 202] by Harry Walton. He sure can write.

R. Nunez, Havana, Cuba.

For another article by Harry Walton, senior editor of PSM's Mechanics & Handi-craft section, see page 190.

Build a Better Trap

We sincerely appreciate the mention in P.S. News and Notes [Sept. '52, p. 162] about the reward we are offering for a "humane" small-animal trap. We have received several inquiries as a result.

LESTER A. GILES Jr.
The American Humane Association
Albany, N. Y.

Is Everest Still Climbing?

How did the author of "Will They Ever Chmb Mt. Everest?" [Oct. '52, p. 118] arrive at the figure of 29,002 feet for the mountain's height? I have heard this figure ridiculed.

WILLARD ALLPHIN, Danvers, Mass.

You are perfectly right that the figure of 29,002 feet has been questioned. It was the first estimate of the mountain's height. A

INVENTORS

If you believe that you have an invention, you should find out how to protect it. The first step is to have a search made of the prior pertinent U. S. patents. If a report on this search indicates that the invention appears patentable you can apply for a patent, and the specifications and claims should be prepared.

The firm of McMorrow, Berman & Davidson, with offices in Washington, D. C., is qualified to take the necessary steps for you. We can make a preliminary search on your invention, advise you whether we think it can be patented, and prepare your application for patent.

Unless you are fully familiar with the U. S. Patent Laws, we recommend that you engage the services of a Registered Patent Attorney to protect your interests. The patent laws are your laws. A patent gives you the right to prevent others from making, using or selling the invention claimed in your patent for a period of 17 years.

Use these patent laws for your protection. Investigate whether your invention can be patented. If you have what you believe to be an invention, we suggest that you have this firm make a search for you.

Send for a copy of our Patent Booklet entitled "How To Protect Your Invention," containing information about patent protection and patent procedure. Along with this we will also send you an "Invention Record" form, for your use in writing down and sketching details of your invention. We will mail them promptly. No obligation. They are yours for the asking.

later trigonometric computation placed the height at 29,141 feet. However, the figure 29,002 is the official estimate of the Survey of India and is generally accepted by most writers.

Some geographers say the Himalayas, a young mountain range, are constantly pushing upward and both figures conceivably were correct at different times.

Paper Money in Different Sizes

A letter in your August issue [p. 12] suggested that different-colored money be used to avoid mistakes in handing out different bills. I think this is a good idea, but if bills

were made in different sizes, it would be impossible for even a blind man to give out the wrong one.

PFC. WILLIAM R. MAURATH, U.S. Army, Tokyo.

Friction Does It

Referring to your answer to Jim McNabb's note about automatic-transmission cars being barred from Mt. Washington [Sept. '52, p 12], you state that "some—makes unspecified—do not have enough compression drag for the descent." I believe it is a mistake to call it "compression drag" for it is vacuum that holds the engine and car in going downhill.

ROBERT T. JONES, Arlington, Ariz.

Theoretically, you may be slightly correct. But actually, according to a GM engineer to whom we put the question, it is neither compression drag nor vacuum that contributes most of the retarding effect that can be obtained from an engine. Engine friction tests conducted by GM show that approximately 95 percent of the retarding effect is created by engine friction. So engine friction drag seems to be the best designation. The engineer notes that you have a point in that the high vacuum created when the throttle is closed may have a slightly greater retarding effect on the pistons than the air that is compressed.

The Dark Continents of Your Mind

DO YOU struggle for balance? Are you forever trying to maintain energy, enthusiasm, and the will to do? Do your personality and power of accomplishment ebb and flow - like a stream controlled by some unseen valve? Deep within you are minute organisms. From their function spring your emotions. They govern your creative ideas and moods - yes, even your enjoyment of life. Once they were thought to be the mysterious seat of the soul -and to be left unexplored. Now cast aside superstition and learn to direct intelligently these powers of self.

Accept this Free Book

Let the Rosscrucians, an age-old fraternity of thinking men and women (not a religion), point out how you may fashion life as you want it - by making the fullest use of these little-understood natural facultus which you possess. This is a challenge to make the most of your heritage as a human. Write for the Free Book, "The Mastery of Life." Address: Scribe O. J. J.

More Local Plants Needed to Make Cement Drain Tile

Hundreds of local plants are selling millions of dollars' worth of coment drain tile every year. But demand in getting bigger, and opportunities are open for hun-

Form drainage, reclamation projects, highway construction—these and other sources are creating a large market. It can be most economically supplied by compact, local plants.

Outstanding Manufacturing Opportunity

Champion drain tile machine is deliberately designed to supply compact, low-investment, tilemaking equipment. Makes finest tile possible - dense, truly

round, and shale proof. Better than clay tile, yet can sell for less because local production seves freight and distribution cost. But project possibilities are high. Business requires no praviour experience — so skilled labor — so special building. Equipment available on

easy terms. Full information on the coment tile business and equipment are given in the Drain Tile Book - free on request.

Training Men for Greater Incomes and Security in Radio-Television

TRAIN BETTER-TRAIN EASTER MONTHS-OR LESS-FOR TELLEVISION

NEW! NO OBLIGATION PLAN

You Have No Monthly Payment Contract to Sign

—Pay For Your Training as You Earn and Learn

You can get into Radio-Television, today's fastest growing big money opportunity field, in months instead of years! My completely new "package unit" training plan prepares you in as little as 10 months or even less! No monthly payment contract to sign—thus NO RISK to you! This is America's finest, most complete, practical training—gets you ready to handle any practical job

Valuable Equipment Included With Training

The new Sprayberry "package" plan includes many big kits of genuine, professional Radio-Television equipment. You perform over 300 demonstrations, experiments and construction projects. You build a powerful 6-tube 2-band radio set, multi-range test meter, signal generator, signal tracer, many other projects. I also include many useful books and service manuals. All equipment and lessons are yours to keep . . . you have practically everything to set up your own profitable Radio-Television service shop.

in the booming Radio-Television industry, where trained service technicians are needed—urgently! Start your own profitable Radio-Television shop... or accept a good paying job. I have trained hundreds of successful Radio-Television technicians during the past 21 years—and stand ready to train you, even if you have no previous experience! Mail coupon and get all the facts—FREE.

Earn Extra Money While You Learn!

Train IN YOUR HOME in spare hours. Keep on with your present job and income while learning. With each training "package" unit, you receive extra plans and "Business Busider" ideas for spare time Radio-Television jobs. New television stations everywhere open vast new opportunities for trained men—and those in training. If you expect to be in the armed forces later, there is no better preparation than practical Byrayberry Radio-Television Training.

SPRAYBERRY ACADEMY OF RADIO 111 NORTH CANAL ST., Dept. 55-5, Chicage 4, III.

I invite you to get all the facts-

I want you to have ALL the facts about my new 10-MONTH Radio-Television Training without cost! Rush coupon for my three big Hadio-Television hooks. 'How to Make Money in Radio-Television' PLUS my new Elustrated Television Bulletin PLUS an actual cample Sprayberry Leason—ALL PREE. No obligation and no selection will call. Mail coupon NOW!

-yours with these Wizards with Wood

Making something that needs finishing? Mending something that needs gluing? If it's made of wood ask for Firzite, Satinlac and Weldwood Glue. At hardware, paint and lumber dealers—or mail coupon for leaflets.

The Wood Gine you can rely ou!

To make things or fix things, use Weldwood Glue for all wood-to-wood bonds. Makes joints stronger than the wood itself. Mixes easily with water, Stainfree, rot-proof ... highly water-resistant!

PLAYING MELNIS BILLIE

Gets that blond or pickled effect-

///ppopy/

Produce those magical "woodsy" effects - on hard wood or soft, plywood or solid lumber with White Firzite, For light pastel tones, tint with Colors-in-Oil. (On fir plywood stain jobs, tame that wild grain with Clear Firmte.)

Gets that Natural-Wood Finish

- without shellac or parnish. On furniture, panelling or woodwork, there's nothing like Satinlac. Brings out natural grain and color beauty of any plywood or solid wood. Avoids that "built-up look; will not turn yellow or darken with age, "Water-clear," easy to brush or apray, dries ready for next coat in 2 or 3 hours.

Pints, Quarts. Gallons

COMMERCIAL TRADES INSTITUTE 1400 Greenlant Avenue . Chicogo 26, III. . Dept. U(-)

Are You a PRISONER in Your Present Job?

Are you tired of your present job-bored with your work. dissatisfied with your pay and your progress?

Here's what H. A. Howell, J. R. Todd, O. O. Broun. John R. Musick, and thousands of others have done:

IF you feel "caged in" by your present job what can you do about it?

Well, first, let's see what you probably can't do. You can't just quitstart all over in some other work. Your responsibilities won't permit it. Besides, have you the training needed to set a good job in another field?

Or, suppose you stay in your present line. Frankly, have you really got the additional "know-bow" needed to move sheed faster in it? And how can you get this training-without quitting your job?

6 Million People Turned to I.C.S.

Pacing such problems, six million people have turned to I.C.S. And year after year I.C.S. "comes through" for those who turn to it for help. For example, a recent flurvey showed that, in one single 120-day period, 1973 I.C.S. students were promoted to better jobel

Here are just a few of thousands of instances. J. R. Todd, of Texas, says, "Already I'm netting \$120 a month profit on my investment-with more to come." John R. Musick, of West Va.,

jumped from \$150 to \$350 a month. O. O. Braun, another Texas-from \$120 to \$600 a month, H. A. Howell says. "I'm \$100 a month richer as result of my I.C.S. training."

Exciting Opportunities Open

In industry after industry there is a crying need for trained men and women. Electronics field, producing 20 times as much as 12 years ago. Chemical industry, growing 10% & year, Electricity generation, due to expand 40% in next 3 years, 2000 new TV stations authorized. Air-conditioner field: a 500% rise in fact 4 years.

You don't have to quit your job to get the training which today's opporonly a lew cents a day and a fraction of home spare-time which may now be getting you nowhere! Your choice of

391 courses; and you get the personal help of one or more of 203 instructors.

Let us send you NOW, free end without obligetion, two books telling bow YOU can get ahead faster, the famous I.C.S. way.

INTERESTING BOOKS

Just mail coupon below for Free Book about the subject you're interested in. You'll also receive, free, our

book on "How to Succeed"a 36-page goldmine of valuable advice telling Why People Fall, How to Pick Your Goal, How to Develop Your Hidden Talents, etc. To take full advantage of today's wonderful new job opportunities, mail coupon NOW.

INVENTORS

Your first step—if you consider your invention to be something of importance—is to have a search made of pertinent, prior U. S. patents. If our search report indicates probable patentability of your invention, you may apply for a patent which gives you the right to exclude others from making, using or selling your invention as claimed for a term of 17 years.

This firm is registered to practice before the U. S. Putent Office and is available to assist in the proparation of the necessary drawings, specification and claims.

Ask for a copy of our instructive backlet "Putent Protection for inventors" and our convenient "Evidence of Invention" form. No obligation.

JORGENSON. Consisted me about a specialty product On my mileto he ran one and to "too!" He spiciosphility. They aid brought seles of \$20,000 in his first year he did a business of nearly a half million dollers. His priginal investment was few Hon a thousand.

Those things I have seen. These people I have beloed to the realisatum of their decame—these and hundreds of others. My nen for-tune was made in Mail Order And new my secrets can be yours.

Have you ever thought of running a profitable little aideline right from your home? Has it occurred to you that you are just as capable as anyone else of making money on a product or service that can be sold by mail? Have you ever looked into the Mail Order husiness as it's run (on tiny investments) by innumerable small operators?

Forget about Seam and Ward's! Read about the "little fellows" . . . clerks, teachers, vets, mechanics, salesmen and others . . who are packing Mail Order Items in bedrooms, spare rooms, attics, garages, cellars ... dumping them in the Post Office ... and quietly banking the fistful of Money Or-dens, cash and checks delivered to them daily by the mailman.

An annual business of almost a billion dollars is done by "httle fellows" who advertime and sell just one item! The Department of Commerce of the United States says, "A number of the most successful obtain incomes as high as \$40,000 to \$50,000.00,"

It's an incredible story . . . a story of a business that's wide-open for newcomers . . with opportunities for income far-and-away greater than you can ordinarily hope to attain by holding down a job. And in Mail Order you can stay as small as you with run your deal as a \$50 or \$75 weekly sideting -or consider jacking it up into really big figures as a full time operation.

Glance at the examples at left. These true stories are far from unusual. Multiply them by the hundreds and you begin to get an idea of what can be done . . . what is being done...in the phenomenal Mail Order field.

Yet, if you were to jump blindly into Mail Order your chances would be alm, A peculear brand of "know-how" is vital in this little - known, little - understood business. This is fortunate for you. If any Tom, Dick, or Harry would "chek" in Mail Order, the field would have been overloaded years ago.

But now you have the apportunity to learn the authentic secrets of successful Mail Order operation. They are revealed for the first time, step by step, in an extraordinary new Survey . . . the L.W. Confidential Mail Order Letters.

This Survey is not a course—not a book - not a group of lessons. It is a simple guide that anyone can follow. It shows you how to pick the right product for Mail Order. It shows you exactly how to start a profitable business /ast, with cash or Money Orders in the envelopes you receive. It shows how to buy your product out of the very money you get in the mail, so you don't have to tie up cash in large supplies of your product. It gives you actual examples of ada and letters, analyzed to show how and why they make money. It demonstrates the months to start, the time to expand, the best way to get prospects names It reveals from A to Z the confidential facts that have made fortunes for Mail Order operators who use them.

Mail the coupon today, or simply send your name and address on a postcard. No salesman will call. We will mail, postage prepaid, a Free copy of "How to Become a Mail Order Millionaire" and along with it will give you complete facts about the L.W. Mail Order Survey. Read the facts, Then decide whether you would like to spend spare time of full time in a profitable, fuscinating Mail Order enterprise. If you think you would like to follow the footsteps of hundreds of others who are now making good money in this way, you can get your L.W Survey and begin at once.

Please don't decide to write us "a little later." Send your name now, before you forget. This one little act mucht be the first step to a future of independence and wealth.

FOR ALL TRUSS WEARER

Mere's wonderful news for all truss wearers. In order to introduce the new Active Man Truss Ped Reser-we will send every truss wearer who answers this advertisement a sample pad easer absolutely free. There are no strings to this offer, no obligation on your part—not a single penny to pay either now or later, These remarkable new pad tasers provide a soft buoyant air cushion that fits under any truss padgives you increased comfort, reduces irritation and greatly improves the holding power and safety of your truss. Prove this to yourself-by writing today for your FREE Active Man Trues Ped Reser. Only one to a person.

Active Man Truss Company Post. PS-1

W. Zundolph St., Chicago, III.

New! Super Resistant Finish "ARMOR-PLATES" Any Wooden Surface

New Liquid Forms Hard Plastic Surface . . . Goes On Like Paint . . . Hardens Like Indestructible Glass

START with any bare wooden (or composition) surface—apply this FENOLIC 101, just like paint with a brush or spray gun - and in several hours you have a hard, plastic surface PRACTICALLY INDESTRUCTIBLE! It can be a clear transparent surface, or in a choice of colors.

RESISTS ALCOHOL, ACIDS, STAINS, CUTS AND SCRATCHES, EXTREME HEAT AND FIRE, POUNDING AND SHOCKS, WEAR AND TEAR, EXTREME WEATHER, RAIN OR SNOW, -Almost Anything!

Will take the most grueling punishment and pounding without any effect. Will last for years and years under the most difficult conditions of use and abuse. After all this, will look as new as when put on.

The secret is a combination of "thermosetting resins" hardened by a special chemical which gets the same result as the heat and pressure usually required to form a plastic. The

result is a plastic-tough film with amazing resistant qualities to heat, chemicals, abrasion and Weather.

Easy To Apply—Brushes or Sprays on Like Paint!

FENOLIC 101 goes on with brush or spray as easily as ordinary paint. It comes in two containers . . . one, of the thermosetting plastic . . . the other a small bottle of chemical catalyst. It can be used on bare board or composition board.

Dries Fast! Hardens Fast!

FENOLIC 101 dries fast! It is dust free in from 1-20 minutes . . . Set to touch in haif hour . . . Dry to handle in an hour. It can actually take light sanding in a few hours, hard sanding in a day. In comparison, remember that high grade varnish films do not dry all the way for many days and require weeks to reach maximum hardness. FENO-LIC 101 becomes 3/5 as bard as plate glass in from 7 to 10 days!

DEALERS! Write for Information about prices and territories? Bodford Co., Dapt, F. 60 E. 11th St., New York 3, N. Y.

What The Experts Say!

Carpen & Lundin well known New York orchiteria, say (of clear Fencise (01): "The surface of the onk stace transacts in the Burnaair offices are becoming figher with age and there is no apparent change in the finish. In view of very netwo traffic on the sinir-uny, no believe the majorial has outstand-ing qualities where heavy gange provails."

Mr. L. S. Dindgett Editor on Marius Enalmosting and Shipping Review writes about a sen that he and his sen built. " It is evident that this is a completely permanurt firsh, highly resident to wore and abrasiso. The extremely hard smooth finish on the bottom shows no sign of corvlee after long bard use."

A B Schrockinger & Sons, Refrigorator Manufacturers say Almost a year ago we sut Fencist 10) Clear Finish on refrigerators installed at Murine Barracks. Many Yard Brooklyn It has revisited moisture. law temperature, fats, blood, etc. with no apparent injury.

STARTLING FIRE TEST

The surface of the left was coaled with a high grade vamish . . . the surface at the right, with fenalic 101. Then, for demonstration, flaming acatons burned for half a minute. in the varnished surface at the left you see warping, seftening, blistering. In the Fenolic 101 surface at the right, na damaga whaleocrar!

TESTED IN WEATHER . . . AND IN WATER!

Mahogany panels coated with Fenolic 101 were exposed in Florida for one year with no loss of gloss. And again at this water in Newark N J bay . . And on an industria, tool in Houston Texas Same results! No tone of gloss.

Here's How You Can Use It

There is query to the acceptable craft and better uses of this would reproduct to a 1. The new request highly to testing for the world of a good before a set or extract that has to with a and entered particle of a good or we as Tay it as an risk if not satisfied by the first for the satisfied be such for the return. PRINCE ALBERT

America's largest-selling smoking tobacco!

Motorized mounts and scientific crime detection haven't robbed the Royal Canadian Mounted Police of adventure.

By Richard L. Neuberger

AT THE remote end of a British Columbia ford the body of a salmon fish erman of the Tshimshean Indian tribe has been found a bullet hole between has eves. The dead man's gill nets slosh beside him in the cold green tide.

From Port Alberto on wooded Vancemiver Island, a sleek 80-foot motor launch puts out through the heaving waters of the North Pacific. The throb-bing of its Diesels carons back from the steep shoreline. Aboard are three young men in greasy coveralls. They travel by darkness and by light to reach the scene of the murder.

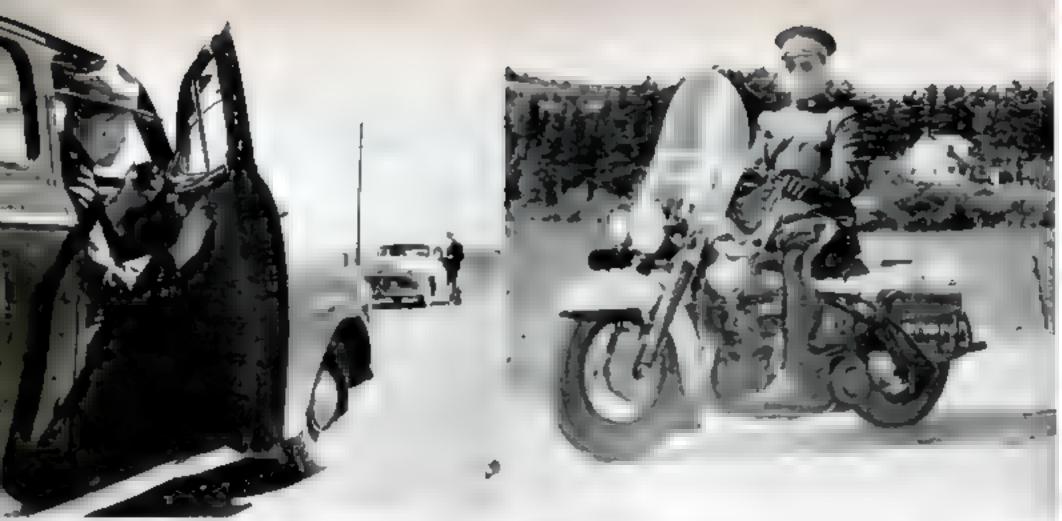

luto a distinctive footprint they pour plaster to get a mold of the mark left behind by a possible suspect. One of them takes photographs of the Indian's body with a new Speed Graphic. He exammes a hair in the cuff of the mackt haw worn by the immdered man and preserves it between glass slides.

From a splantered log on the beach another of the launch's crew pines a dented bullet and peers at it through a lens. He scribbles in a notebook that the bullet probably is of 303 calibration be packs the missile in cotton.

Mounties be Streamlined None

These vonthand in vigators who ride trim launches and send their evolution to crime-detection laboratories are ment bets of a law enforcement organization that is associated in the public nimel with sled dogs, prancing stallions and risticlog cabins. They are incrobers of the legendary Royal Canadian Mounted Police

The Mounties of 1953 are streamlined

MOTORIZED STEEDS are now the mounts of the Mounties. Here a constable radiophones has headquarters at Swift Current. Sask., while his companion checks a driver's license.

MOUNTIES use almost every means of transportation—including 50 motorcycles. These are seen mostly in Nova Scotia and Ontario. Trooper above patrols roads near Toronto.

mechanized, motorized and fitted with wings, radar and spectrographs. They now have fewer horses—exactly 143 a few weeks ago—than the New York City police department.

The Mountie of old had to know how to break a snarling malemute to the harness, how to bed down 14 evil-tempered dogs on an arctic plain with the aurora borealis crackling overhead. If he traveled the prairie, he had to know how to curry his borse and keep it off glare ice where a fall would mean a broken leg. Now, the first thing an RCMP recruit must learn to do is drive a car.

"Once we needed stablemen, dogmushers, vetermarians and cowboys," Inspector Edward H. Stevenson, six-foot four-inch police officer in charge of training for the force in British Columbia, told me recently. "Today our requirements run more to mechanics, radio operators, airplane pilots."

On the Alaska Highway the careless motorist may be halted by a warning siren. Behind him is a black-and-white patrol car. Blanker lights surmount the roof. A radiotelephone is on the dashboard. A tall constable strolls over and asks in even tones, "May I see your driver's heense, please?"

He wears a tunic of chocolate brown, not the vivid scarlet which is reserved for ceremonial occasions or tourist meccas. From each of the shiny brass buttons fastening the constable's jacket stares a buffalo head wreathed with the motto of the force. This is not, as the movies would have it. "Don't come back until you get your man," but the more dignified and impressive French, Maintiens le droit—"Uphold the right."

Upholding the Right

This is exactly what 4.341 Mounties try to do among 14,200,000 people scattered over a greater land area than the United States. The Aviation Section of the force, staffed principally by ex-Royal Canadian Air Force combat fiters, uses a dozen planes to soar into the remote bush, and the Marine Division is a small navy in itself. It has 86 craft and 212 men. Some of the boats are mere outboard skiffs, but others are 112-foot cutters and 162-foot converted minesweepers.

The Mounties also work unobtrusively, John Leopold, born in Bohemia, enlisted with visions of glamorous northern patrols. But as he had a European accent, he was sent instead to join the Commu-

PROUD MEMBER of the Mountie "navy" is the 80-ton, Diesel-powered St. Roch. It is said to

he the only vessel ever to have sailed both ways through the famous Northwest Possage.

nist party in Canada as an itmerant house painter. He worked his way into the high command of the party and helped to break up a Soviet spy ring in Ottawa

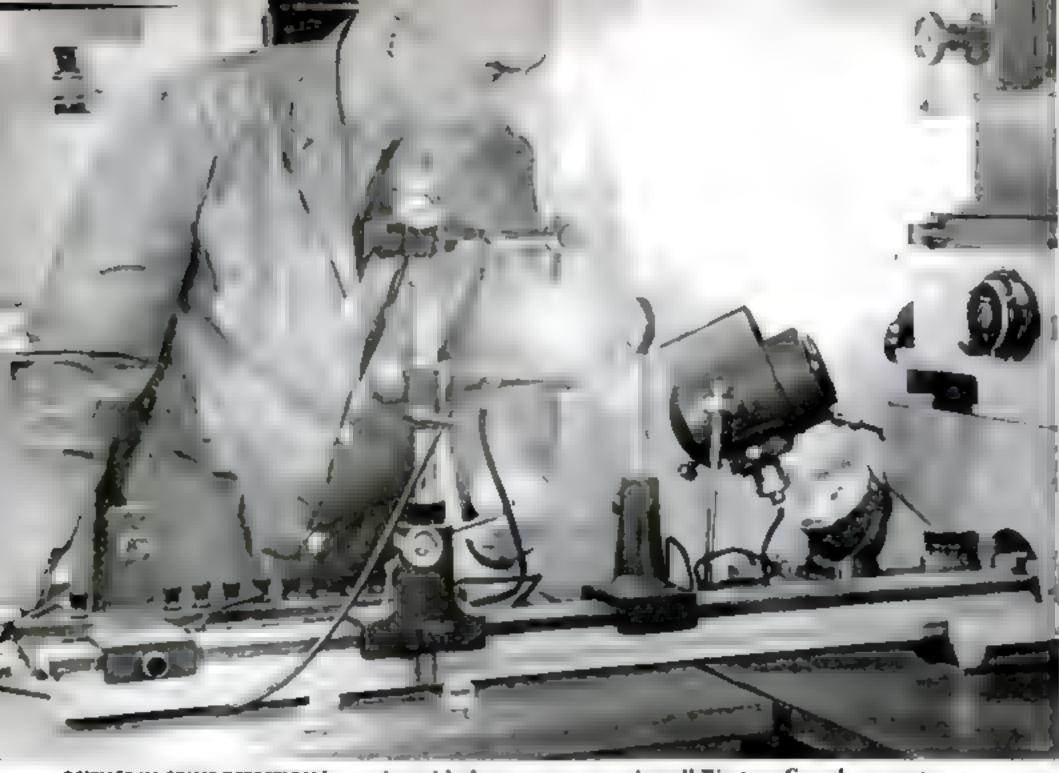

A Mountie need not have been born under the Union Jack but he must be a British or Canadian subject. When he enlists he should be between 18 and 50 years of age, at least five feet eight mehes tall, weigh between 165 and 210 pounds, and have gone through the eighth grade in school

Six months of training is required to produce a Mountie. Only three out of every 28 applicants are finally sworn in as constables, the lowest rank in the force, Boxing, wrestling, juntsu—these are some of the physical routines. But the recruit also must learn to punch a type writer at the rate of 30 words a minute or better. "We want no chicken-track

THE MOUNTED POLICE are sky-riders, too. The Aviation Section, staffed mostly by former combat fiters, keeps an eagle eye on the vast northern wilderness of lakes, frozen wastes.

JANUARY 1953 99

SCIENCE IN CRIME DETECTION is contine with the Mounties. Above, a constable at Regina labo-

ratory, serving all Western Canada, uses spectrograph to study a piece of evidence.

reports on important cases coming out of the North," says Inspector Stevenson.

As a matter of discipline and morale, a Mountie learns to handle a horse expertly. As a matter of necessity, he is taught how to repair, maintain and operate a car, because the force uses 1,219 motor vehicles.

Mountie Must Learn Many Skills

The Mountie of 1953 must be familiar with physics and chemistry, and these scientific realities he encounters in the crime laboratories at Regina and Rock-cliffe, which rival the labs of the FBI, Scotland Yard and the Sureté.

He learns how to record fingerprints and how to read them. He is taught how to operate a camera. He masters ballistics and he finds out about toxicology.

Why this rigorous schooling? I once asked the question of Stuart Taylor Wood, who retired not long ago as the

top-ranking Mountie of them all, holding the title of Commissioner.

"Being a member of the RCMP is more than being an ordinary policeman," replied Commissioner Wood, "The Mounted Police have many detachments where only one man is stationed. He may be hundreds of miles from another post. He must have innumerable skills. He may have to be doctor and nurse one moment, a cook the next and magistrate still later. And he must have a sense of tradition and history. That is why he never wears a red tunic until graduation day. He may not wear it very often again, but it has for him rich significance."

Wood's successor as boss Mountie is 48-year-old Leonard N. Nicholson, a compact, graying man and a crack rifle shot. Commissioner Nicholson's annual salary is \$15,000. An inspector gets \$6,000 a year, a staff sergeant \$3,900, a sergeant \$3,600, a corporal \$3,300 and a

RECRUITS learn to become typewriter Jockeys at Fairmont Barracks, Vancouver. The ability to make clear reports in the field is an important part of every Mountie's job.

FINGERPRINTS taken at the scene of a crime in the distant wilderness and later identified in a Mountie crime lab have brought more than one lawbreaker to the end of his trail.

beginning constable \$2.520. Living allowances also are provided and a member of the force may retire with a pension at the end of 20 years of service.

They Often Work Alone

Aptitude tests are given to all who enlist in the Mounted. Since this famous force rarely sends two troopers to do one trooper's job, Mounties frequently are on their own. This calls for quick thinking if the right is to be upheld.

In the western ranges a trapper was murdered. His furs were gone. The trapper had cured his skins in a certain fashion. Sooner or later those skins had to show up somewhere. A Mountie pinpointed the most obscure trading post in the area. The trapper's murderer, he felt, would be more likely to trek there than to a more conspicuous post.

Trap for a Murderer

When at last the pelts of the slain man were turned in, the factor flashed a warning glance to the logger in corduroys who whittled by the stove. Soon the slayer heard the ominous words of the criminal code: "I arrest you in the name of the King and warn you that anything you say may be taken down in writing and used against you in court."

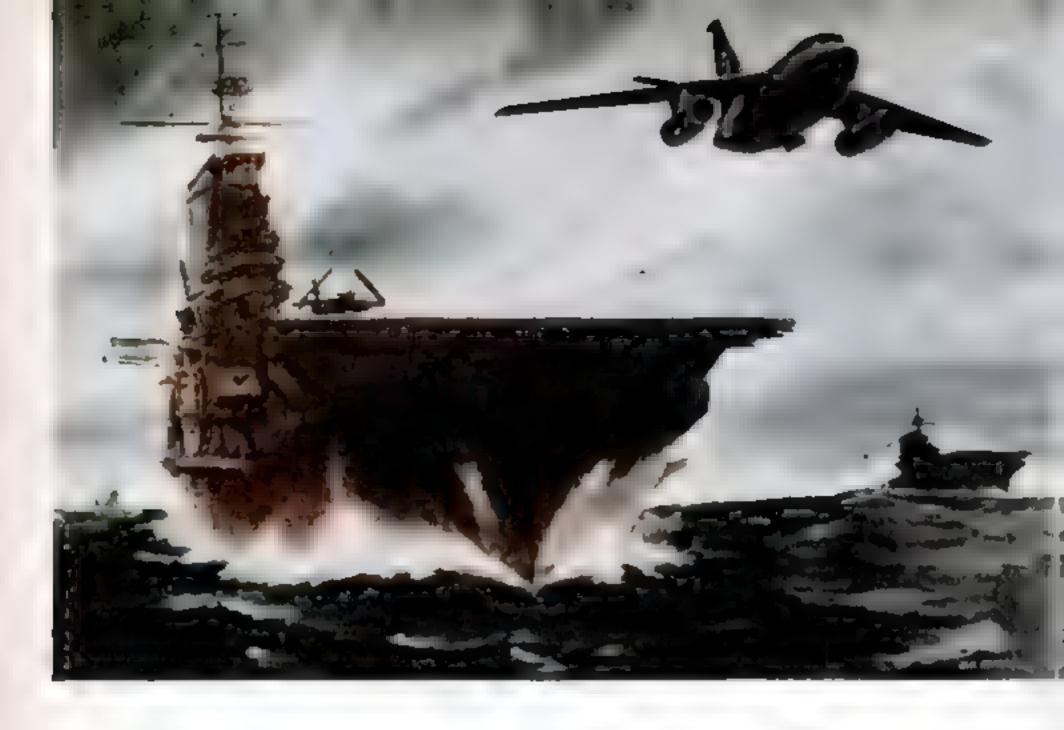

A prospective Mountie must be single when he enlists and he cannot marry for at least five years afterward. Even then, he may not take a bride without the permission of his commanding officer. I asked Assistant Commissioner C. E. Rivett-Carnac, who commands the 777 Mounties on duty in British Columbia, the justification for this rule.

Single Man Can Go Anywhere

"Our force has to have real mobility," he replied. "This is particularly important in the North. A young man who is single can go anywhere. He can live in a tent, a shanty, an igloo or a Quonset hut. Furthermore, a young man who is single often can be free of the responsibilities which might restrain a married man from undertaking a long and perilous mission."

But once a Mountie has served his five-year hitch and gets married, his wife may go with him, no matter how remote the outpost. Many of the most isolated detachments consist of a house divided equally between hving quarters and a police office. When the Mountie is away on patrol, the wife may operate the radio which maintains contact with a distant headquarters. In the Alberta bush north of Edmonton I met a statuesque

Balloon-Launched Rockets Measure

ALTHOUGH cosmic ravs can penetrate 18 inches of solid lead, you can't always check theories about them inside a cozylaboratory. Scientists went to the opposite extreme recently—wind-swept, iceberg-strewn Baffin Bay in the Far North.

From the rolling deck of the Coast Guard icebreaker *Eastwind*, they launched their measuring instruments in rockets that bitch-hiked part of their rides on gigantic plastic balloons. Fired at the peak of the balloon travel, the rockets reached altitudes of 40 miles. There was no need to recover the instruments, since all data was radioed from the rockets back to the *Eastwind*, where it was recorded and analyzed

The frigid location of the expedition was chosen because it is near the earth's geomagnetic pole, where cosmic rays are least affected by earth magnetism. Measurements made at high altitudes there most closely indicate the condition of the strange cosmic rays as they exist in outer space. The expedition was part of a program of cosmic-radiation investigations being carried out noutly by the Office of Naval Research and the Atomic Energy Commission.

New Navy Jet Has Top Striking Power

THE hottest carrier plane ever built is the Navy's new Douglas A3D pictured in the painting at left, just recently flight-tested for the first time. Designed to fly faster and farther than any previous type, the swept-wing, twin jet attack bomber will carry the largest carrier-launched bombs and torpedoes—and that presumably means the A-bomb—to strike at far-flung enemy installations.

Although it is the Navy's largest bomber, the jet is small and light in relation to its striking power. As a combat plane, it is in the 600- to 700-m.p.h. class, with a ceiling above 40,000 feet. It will also be used as a mine layer and for photo reconnaissance. A pilot, pilot-bombardier, and gunner-navigator make up its crew. Both wing and tail fold for storage aboard earriers.

Tired Enough for an Accident?

How much work can you do before fatigue lines you up for an accident? In its safety campaign, du Pont built this station ary bicycle to find out. An electrically loaded wheel supplies the work, while wires carry indications of blood pressure and pulse to technicians in another room.

Cosmic Rays 40 Miles Over Arctic

Broadcasting's greatest stride since frequency modulation puts musicians to left and right of you, in true perspective.

By Henry B. Comstock

A NEW type of radio broadcast, so realistic that you will know just which end of the sofa to dive under when Poncho lets blaze with his Colt .45, is ready for you, It will be on the air whenever you and a hundred million other dialityisters ask for it.

Fifty-six years ago, gramophone-cylinder cartons carried the slogan: "Absolutely faithful to the original." So you may be pardoned if you now dismiss such boasts as meaningless surface noise.

But great strides have been made in reproducing sound—with super-sensitive microphones, frequency modulation, and speaker units which can talk in the 30cycle-per-second fundamentals of the pipe organ, or in the 15,000-cycle harmonics of the piccolo or violin.

Yet all of today's commercial broad-

casting still shares a basic defect of Edison's first talking machine. It lacks the three-dimensional quality of live sound, or what the engineers call audio perspective.

"Never heard of it," says the average listener, "so how do I know what I'm missing?"

Try this experiment. Close your eyes and press a hand tightly over one ear. Then locate, if you can, the source of some sound in your living room, or out on the street. Let's assume that this sound conveys a sensation of movement. An increase or decrease in volume tells you that. But can you say, with certainty, that it is moving from left to right, or vice versa?

The chances are that you cannot. This proves, according to the experts, that you were given two ears, not to double your hearing, but to serve as a highly

sensitive sound hookup. Your two-source or binaural, hearing helps you to duck taxicabs behind you. And it is also essential to your full enjoyment of sound Without it, you would never thrill to the directional richness of a circus band as it swings out of Dugan's Alley onto Main Street

Yet the most perfectly designed radio sets, and all of the costly equipment used to channel programs into them, fail to bring you this enjoyment. Sound engineers spot their mechanical ears through-

YOU NEED two radios—one AM and one FM to bring present stereophonic broadcasts into your bonic. Each reproduces the pickup from a separate interophone.

out the studio as carefully as a conductor arranges his musicians. Then they blend the output of these mikes into a tasty stew which is generally dished out to you in a single bowl—the cone of your loudspeaker.

Now suppose that instead of pouring the output of a number of number of number into one speaker, the engineers were to set up two mikes, one at either side of a live orchestra, and funnel the separate outputs one to each of your ears through a headset. That would give you a startling effect of sound perspective. The string section would be properly separated from the brass, soloists would stand out from an instrumental background. There is only one catch. Few listeners want to go back to carphones.

How about substituting two loudspeakers? Fine, sayltheated or engineers
That is, provided voit pluce them at least
Often apart, and at equal distances from
the listener. Naturally the acoustics of the
room will destroy part of the effect of
realism which earphones give you, but

TWELVE-INCH binaural record has two sound tracks, is played with a dual tone arm. Recorder, earphones, speakers and disks are sold by New York's Harvey Radio Co.

not enough to dampen your enthusiasm for a brand-new broadcasting thrill."

In 1933, early champions of stereophonic sound tried out this experiment at the Chicago World's Fair. Using two widely-spaced microphones, they sent out broadcasts of each pickup over separate AM station bands. That broadcast came too soon. In those days few listeners could afford two home radios.

Today, the whole situation has changed. Quite apart from huge radio and television sales, manufacturers of phonographs produced more than 825,000 record players in 1952. That gives you some idea of the market for a sound "extra" which promises good listening.

Revived at Audio Fair

With this in mind, New York City radio station WQXR-WQXRFM recently revived stereophonic broadcast experiments as a special feature of the 1952 Audio Fair. The technique was different this time, Equipped, as its call letters indicate, for both AM and FM broadcasting, the station channeled the output of one microphone into its AM band and the other into FM.

Listener reaction was tremendous. There was only one complaint. Many histeners reported that superior FM reception tended to shade the AM pickup. This raises an interesting possibility for stations broadcasting both FM radio and television, since TV sound is also FM.

By adding two balanced FM sound channels to a TV picture, they could bring a whole new world of realism into your parlor.

What about canned broadcasts? Transcriptions have become a dominant factor in the industry. Can they be made stereophonic? The answer is that they can and have been. Stereophonic records were made as long ago as the early Thirties, using a combination of lateral wave and "hill and dale" (vertical) cutting, to produce two separate sound tracks in a single groove.

The system now in commercial use is less complicated. Two grooves are cut in one side of a 12-inch record, one spiraling inward from its outside circumference, and the other from a point midway across the playing surface. In the playback, two heads on a single tone arm pick up the individual recordings and send them to two speakers. The chief selling point of the stereophonic disk is the ease with which any number of duplicates can be pressed.

Available on Tape

Stereophonic tape is also available. While it does not lend itself to mass-production recording, it provides a simpler system of synchronization. A standard quarter-inch tape, passed over two reproducing heads, receives two parallel recordings, and the playbacks are carried to separate speakers, or into the individual earpieces of a headset. Two manufacturers are now offering such equipment, and both describe it as binaural. If you are a stickler for accuracy, you may object to that definition when it is applied to loudspeaker reception. Technically, stereophonic sound is binaural only when you hear it through a headset.

But whether you call it binaural, stereophonic, three-dimensional or audio perspective, this new medium of sound reproduction is now yours for the asking. Whether or not it will become a part of your daily radio diet depends upon how long you are satisfied to hear studio broadcasts through a keyhole which only lets you use one ear.

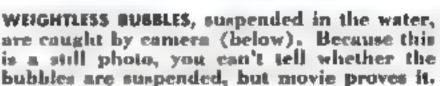

They Use Bubbles to Prepare for Flight into Space

PHYSICISTS will tell you that any freely falling object has no weight. But they do not recommend jumping off a building to prove it. A safer demonstration has been figured out by Dr. Fritz Huber, space-flight expert at the Air Force School of Aviation Medicine, Randolph Field, Tex. He does it with movies.

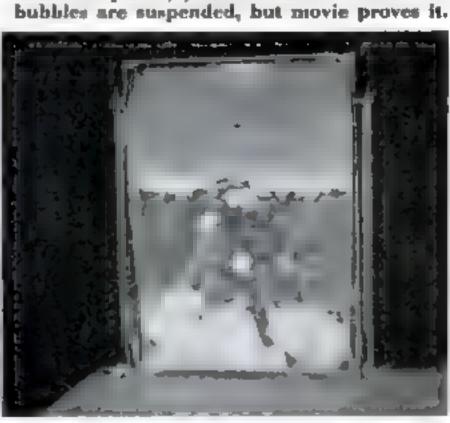

The photos on this page show how. His main prop was a bottle of plain water containing dry ice in the bottom to make bubbles. This was fastened to one end of a board with a movie camera attached at the other end. The whole thing, with the camera running, was then dropped from a platform near the roof of a building (photo at right). During the second or so while the bottle was in the air, the bubbles, instead of rising, were suspended in the water. That proves they had no weight, and neither did the water or the bottle.

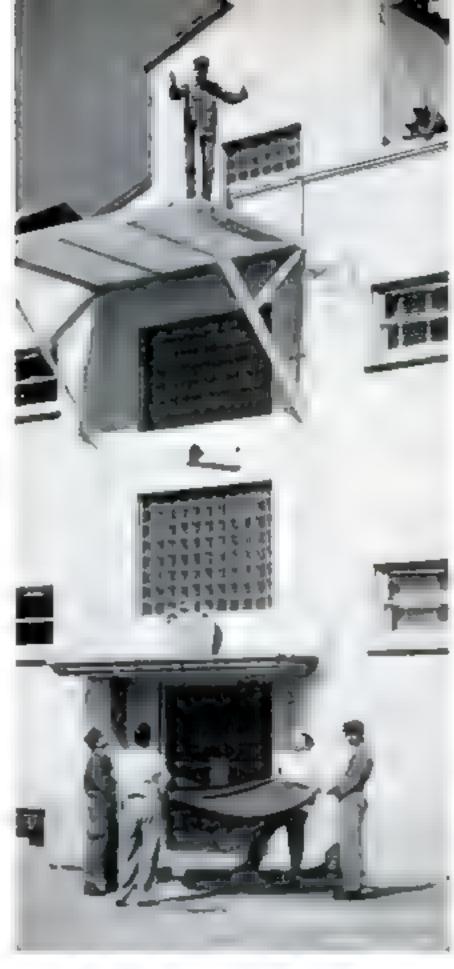

Reason for the studies is that similar weightlessness is experienced momentarily by pilots of high-speed jet planes under certain conditions. And future space travelers will have to go through long periods without weight (PSM, Dec. '52, p. 88).

BUBBLE-BOTTLE and movie-camera gadget to show weightlessness of falling objects was rigged up by Lt. Arthur P. Thiesen, photo officer at the School of Aviation Medicine.

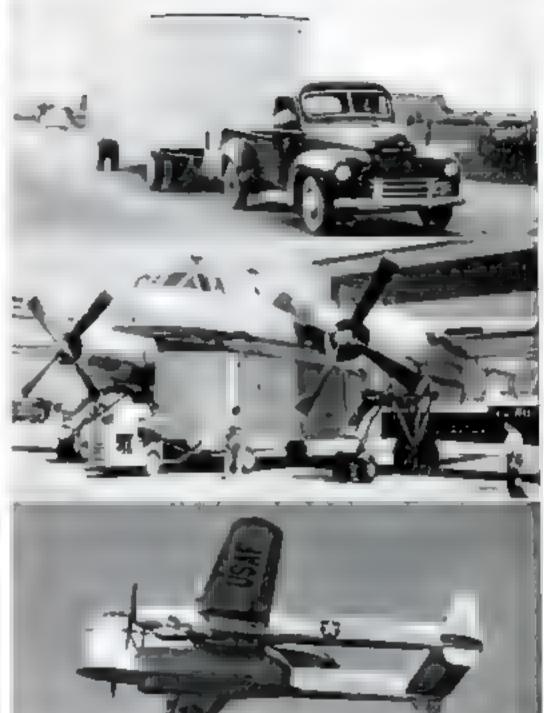

More Muscles for New Tractor

This new '53 Ford tractor works harder as the going gets tougher. Extra power from its four-cylinder engine is automatically supplied as needed by a hydraulic transmission to either the driving wheels or an implement attached to the tractor.

Control Cuts Record Scratch

Hooked to a phonograph, this control lets you hear an early Caruso recording without listening to a lot of surface noise. It compensates for scratched and worn surfaces on old or modern disks. The unit connects between the pickup cartridge and the phonograph preamplifier. It has a control to vary the amount of compensation and will work on all records. GE makes it for use with its pickup cartridge.

Hitches Plane Ride

THE long-haul trailer at top above can hitch a ride and go by air. It nestles into an XC-120 Pack Plane as shown in the bottom photo. On the road, front and rear doors are folded flat; for flight, the doors are opened and locked in a modified V shape to cut air resistance. After the cargo pod is attached, its wheels and tow bar can be removed and stowed inside the trailer. Both cargo pod and plane were designed by Fairchild.

They Say Now.....

"It is not unreasonable to imagine that our life span may be doubled or tripled."—JEAN ROSTAND, FRENCH BIOLOGIST.

"The curve of discovery has been rising for centuries and there is no

sign of any flattening out or decline."—MAX COSYNS, PHYSICIST, FREE UNIVERSITY OF BRUSSELS.

"I sincerely believe that we are still near the dawn of our technical development."—L. B. Bellamy, president, American Society of Tool Engineers.

THE first plastic-body automobile to be produced in any quantity—a two-seater Henry J sports car styled by Howard Darrin of Hollywood—will make its appearance this year. Kaiser-Frazer plans to make 1,000. Price? Guesses range from \$2,500 up.

The use of plastic, reinforced by Fiberglas, reduces the body weight 300 pounds under that of a metal car. There are two luggage compartments, one under the hood. Both hood and trunk are opened by knobs on the dash. The convertible top-also pushbutton controlled-folds neatly into the rear luggage compartment.

Kaiser Plans Plastic-Body Henry J

RECOGNIZE THIS CAR as a Henry J? New plastic body with glass-fiber reinforcement stands

only 34 inches high to top of windshield. Bottom of door is lower than curb height.

SLIDING DOORS are car's outstanding feature. Touch a button and an electric motor pulls door forward inside front fender panel. Motor does double duty—it raises, lowers windows.

SEAT IS TRIMMED to match or contrast with paint job to suit customer. Curved two-piece windshield extends back to door line. A six-cylinder, 65-hp. engine powers the car.

Lincoln Forges Ahead in Horsepower Race

Its whopping-big 205 horsepower, squeezed out of the same basic engine, now make this the hottest mass-produced car in the world.

I'VE just driven the world's most powerful high-production automobile. It has 205 horsepower, a take-off that will scare the pants off you, and a reserve of sass even at 75 miles an hour that will overtake anything else on the road.

It has averaged almost 115 miles an hour for 100 miles of steady running. It will accelerate from a standing start to 60 in 12 seconds. It will top 80 in 22 seconds. That's the 1953 Lincoln.

It's no wonder Lincolns were first, second, third and fourth in the stock-car division of the Mexican Road Race—a tremendous tribute to their power and handleability.

And there's a lot more. It has all the new doodads being put on the luxury cars—including power steering and power brakes. It has an optional trick seat that goes up and down and back and forth by motors. It has, naturally, an automatic transmission. Basically, the new Lincoln is only a refined version of last year's car. Even the engine is essentially the same. They've just coaxed more power out of it. How they did it is a story with double interest because one change reflects a squabble among Detroit car manufacturers.

How did they boost horsepower from 160 in 1952 to 205 in 1953—the biggest gain without an increase in displacement in the history of the industry? Well, that takes some explaining. I

THE ACCELERATION of the new Lincoln compared with that of the '52 was evident a second after the starter dropped the flag in this demonstration. The '53 car is in background.

paid a visit to Ford's test track at Dearborn, drove the car, and talked to some of the engineers who wrought the changes. Those changes are subtle, but they add up to performance

To dramatize that, I got behind the wheel of a new Lincoln idling on a straightaway in the infield, Five feet to my left was a 1952 Lincoln, exactly abreast. A starter dropped a flag. The driver of the other car and I lit our accelerators at the same instant. The accompanying pictures tell the story, If he'd been anchored, I couldn't have left him much faster

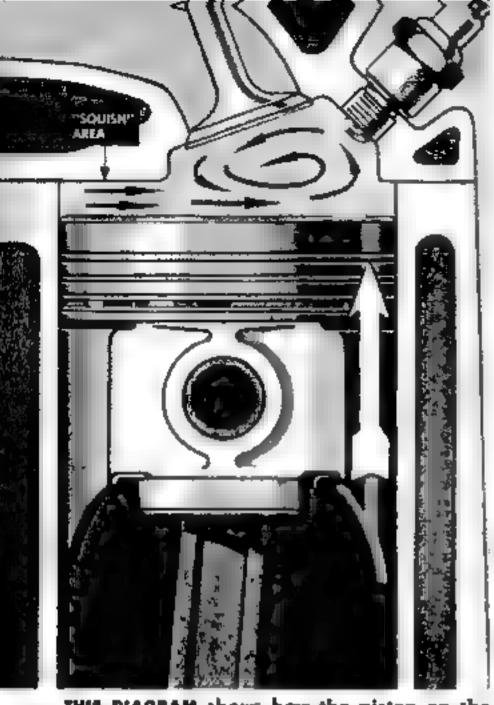

You can sum up the reason for this spectacular performance by saying that

THE OLD LINCOLN had gone exactly 500 feet or 1½ city blocks—when the new one had pulled 135 feet ahead. Compression ratio has been upped from 7.5 to 8 to 1.

POWER CONTROLS for front scale were inevitable—women go for such things. Two little electric motors in '53 Lincoln move scat 4¹4 inches fore and aft, 1¹2 inches vertically.

THIS DIAGRAM shows how the piston on the compression stroke causes turbulence in the gas-air charge by "squishing" it at jet velocities out of a low-roofed portion of chamber.

Lincoln improved the breathing of its engine. A gasoline engine is a "hot-air engine." It pumps air, like the human lungs, And, like the lungs, it doesn't do so well when its breathing is restricted.

You don't do so well when you've got a cold, do you? The first thing they did to the new Lincoln was enlarge the intake valve. (It's a lot harder to get a gas-air charge into the cylinders than it is to get the burned gas out.) Last year the valve had a diameter of about 1% inches. Now its diameter is almost two inches. Then they increased the distance that the valve is lifted off its seat by the camshaft by about 3/128 inch. That doesn't sound like much, but it's part of the difference between that cold in your head and free breathing.

Engine Winds Up Faster

They replaced their old two-barrel carburetor with one having four barrels—that lets more air get into the intake manifold and the cylinders. They put a linkage on the distributor to advance the spark mechanically as you step on the accelerator from a dead stop.

They changed the rear-axle ratio to let the engine wind up faster—and that makes the engine operate at a more efficient part of its power curve. They engineered in a higher compression ratio—highest in the industry—for additional power and better combustion.

Finally, they changed the shape of the combustion chamber. And right there is where the squabble among the manufacturers occurs.

Engineers are always working to encourage progressive burning of the fuel-

FACTS ON '53 LINCOLN

Model: Lincoln Cosmopolitan Custom 4door sedan.

Engine: V-8 overhead valve, 205 hp. at 4,000 r.p.m.; compression ratio, 8:1; piston displacement, 317.5 cu. in.; piston travel (in feet per car mile at 20 m.p.h.), 1,379; bore and stroke, 3.8" by 3.5"; crankshaft bearing surface, 43.49 sq. in.; torque, 305 lb.-ft. at 2,000 r.p.m.

Weight: 4,262 lb., per hp., 20.79 lb.

Transmission: Hydra-Matic; rear-axle ratio, 3.31.1.

Steering ratio: 26.1.1; radius of turning circle, 22.7 ft.

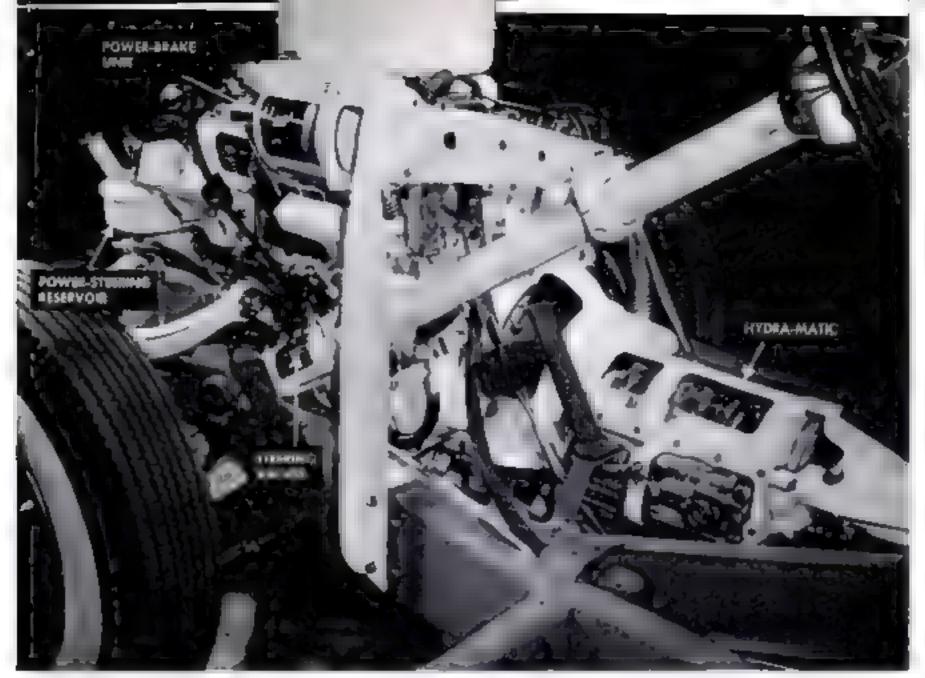

Effective brake-lining area: 202.3 sq. in.

Springe: front, ball-joint individual coil, rear, semi-elliptic.

Outside dimensions: height, 62.7", overall length, with bumpers and guards, 214.1"; width, 77.5"; wheelbase, 123"; overhang, front 38.3", rear 52.8", tread, front 58.5", rear 58.5",

Inside dimensions: seat-cushion width, front 62.3", rear 62.1"; leg room, front 44.3", rear 42.8"; headroom, front 35.5", rear 34.7"; seat height, front 13.3", rear 12.5"; vertical distance, steering wheel to seat cushion, with seat in rear-position, 4.9"; front-seat adjustment, horizontal 4%", vertical 1%".

Tire eise: 8.00 by 15 super balloon.

HERE'S THE NEW CHASSIS. The power steering reduces the steering-wheel pull in parking

from 42 to seven pounds. Power braking requires about a third less pedal pressure.

air charge in automobile cylinders. You can't get the power out of your gasoline unless the charge burns progressively or gradually, like a piece of wood in a fire-place. The only difference between a charge in a cylinder and the firewood is the time it takes for combustion.

Auto Makers Disagree

If the gas-air charge doesn't burn as it should, you get detonation or "ping." That means the charge ignites in more than one place. The spark plug starts it burning, and then perhaps compression or radiant heat resulting from the initial combustion, or the combination of both, causes the rest of the charge to ignite prematurely. That sets up pressure patterns fighting each other in the cylinder head.

Result: ping. Result: loss of power.

You'll remember that when Chrysler brought out its hemispherical combustion chamber (PSM, Mar. '51, p. 134)—now in the DeSoto and Dodge, too—the reason given was to improve the combustion.

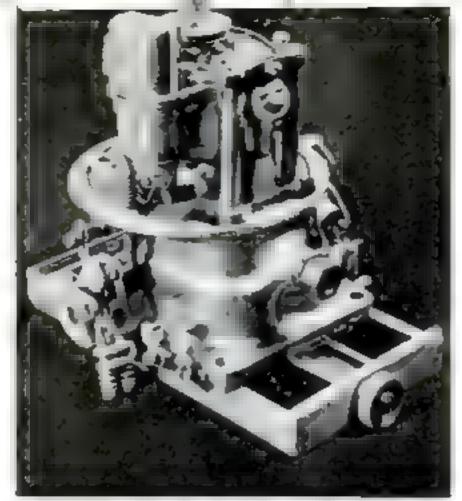

Chrysler put its spark plug at the apex of the hemisphere so that the flame would spread from it like a wave when a pebble is dropped into a pool of water.

The Ford Motor Co. and General Motors, among others, don't agree with this attack on the ping problem. They contend that for best combustion at both high and low speeds, the shape of the combustion chamber is important mostly to create a tornado. The shape sets up a whirling movement in the gas-air charge just before ignition.

Ges and Air Must Thoroughly Mix

They argue that a smooth, hemispherical head "stratifies" the charge at low speeds—that the vaporized gas and air, not mixed properly in the carburetor and manifold, tend to lie in layers in the top of the cylinder. That, they say, results in incomplete combustion or, if not that, creates the need for a richer mixture to get good combustion.

So they shape the head to cause high turbulence and mix the gas and air thoroughly. That, say the Ford and GM

FOUR-BARREL CARBURETOR, unlike any other in the industry, has a float bowl that sits on top on stilts. This is to insulate it from engine heat and prevent "vapor-lock stall."

engineers, insures progressive burning at all engine speeds, and that's what the Lincoln people have done.

More Power on Less Fuel

They must have done pretty well the new engine uses less fuel for each horsepower produced than the old one. Only a pittance of the fresh performance is attributed to the increase in compression.

They've done other things. By opening up obstructions in the exhaust system, they have reduced back pressures in the

engine. It "exhales" more easily. They incorporated an adjustable fast idle when this powerful engine is on automatic choke to accommodate winter temperatures in either Florida or Minnesota.

The new Lincoln astonished me. But I've begun to look on these ever higher and higher horsepowers with mixed feelings. Detroit now has a race on, Cadillac started it. Chrysler caught up and passed Cadillac, Lincoln has forged ahead of both, Cars in the lower price ranges are following.

Faster Cars Need Better Drivers

It wouldn't surprise me if Cadillac, still at 190 horsepower as this is written, tops even Lincoln's 205 for '53.

The only real reason for higher horsepowers is performance in the higher speed ranges. The actual horsepower required to propel a 4,000-pound car at 30 miles an hour is ridiculously little—about seven horsepower. Any additional power developed by the engine at that speed is consumed by its own friction.

I like horsepower. I like performance. I like speed in moderation. But I also like safe highways. I suspect that presently Detroit will have to put a limit on these climbing horsepowers.

The only alternative to that is teaching motorists that under their accelerator pedals is something with a dual personality—servant and monster. END

Lincoln's styling is not much changed from last year-but, boy, when you step on the gas!

Most obvious change in '53 Ford is new grille. Other body lines are about same as last year.

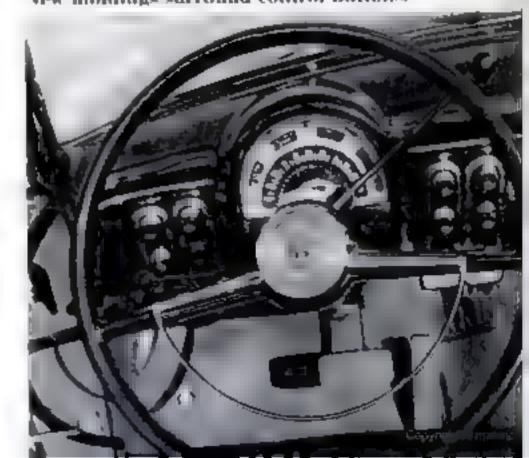

Ford Takes Thump Out of Bumps

In the 1953 models the brunt of the joits is taken by the springs and shock absorbers instead of by the body of the car and you.

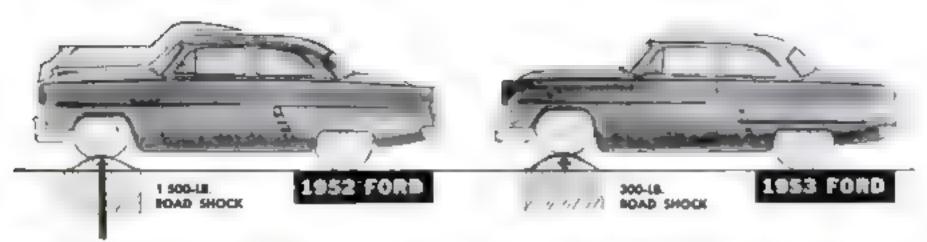

IF SOMEBODY blindfolded you and took you for a ride in a 1953 Ford over a rough road, you would never recognize the car.

The thump and bump when the wheels hit chuck holes are gone. The ride is "flatter," as the engineers say. The springs and shock absorbers take the jolts without transmitting them to the body of the car and the passengers.

Most of the jars that put your teeth on edge in motoring come from "strike through" or "bottoming." For a second, it's just as though you had no springs at all. The road shocks hit the body like CHANGES IN INSTRUMENT PANEL include envierto-read needles on speedometer, animeter, and gas, oil-temperature and pressure gauges, New moldings surround control buttons.

JANUARY 1953 [15

ROAD SHOCK IS REDUCED 80 percent, Ford claims, by changes in springs, shock absorbers and wheel travel. Drawings show how

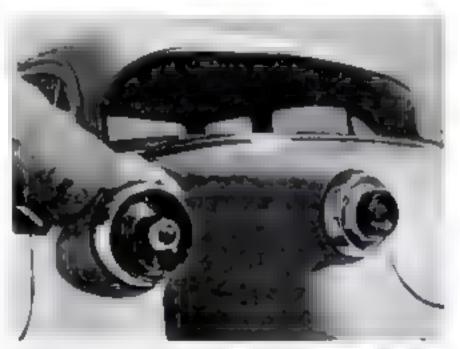

1,500 pounds of shock transmitted by a bump to frame and body of 1952 car is reduced to only 300 pounds in 1953 models.

sledge hammers. The car hits a bad bump, the springs flex and the rubber strike pads on the suspension bang against the frame.

A number of little alterations make the difference in the new Ford's ride. The

MODERNISTIC REAR FENDER is speared by a chrome strip across wheel cutout. Up front, added wheel travel necessitated addition of skid plate to protect engine oil pan.

JET-TYPE TAIL LIGHTS for '53 have projecting centerpiece outlined in chrome (left). The tail light for last year's model is shown on the car at right.

amount of up-and-down travel allowed the front wheels before the strike pads but the frame is doubled. The travel distance for the front and rear wheels is now about the same. More flexible pads absorb more jounce. A different gauge of spring leaf is used on the semi-elliptics in the rear for softness.

To take care of the added spring softness, the shock absorbers were redesigned. When the springs flex, the shock absorbers snub the movement faster.

In celebration of Ford's half-century of manufacture, the top of the steering column carries a medallion inside a new half-circle horn ring with the words: "50th Anniversary—1903-1953."

"Hooters" Are Eliminated

They have done something else to the new Ford. Last year a car came off the assembly line now and then with an ailment diagnosed technically as resonance. It "hooted." Vibrations started somewhere near the front of the car, created noises and grew in volume as sympathetic vibrations were set up somewhere about midway between the front and rear wheels. The engineering department got a king-size headache looking for the trouble.

One day a research man became aware that when he turned a hard corner in a "hooter" the noise stopped. Hah! He smelled a rat. He filled his oil pan to the brim. That did it. The resonance had been originating in the pan and spreading to the exhaust piping. For '53 there will be no more hooters. The oil pan has been stiffened.—Devon Francis.

New Mercury Looks Longer Performs Better

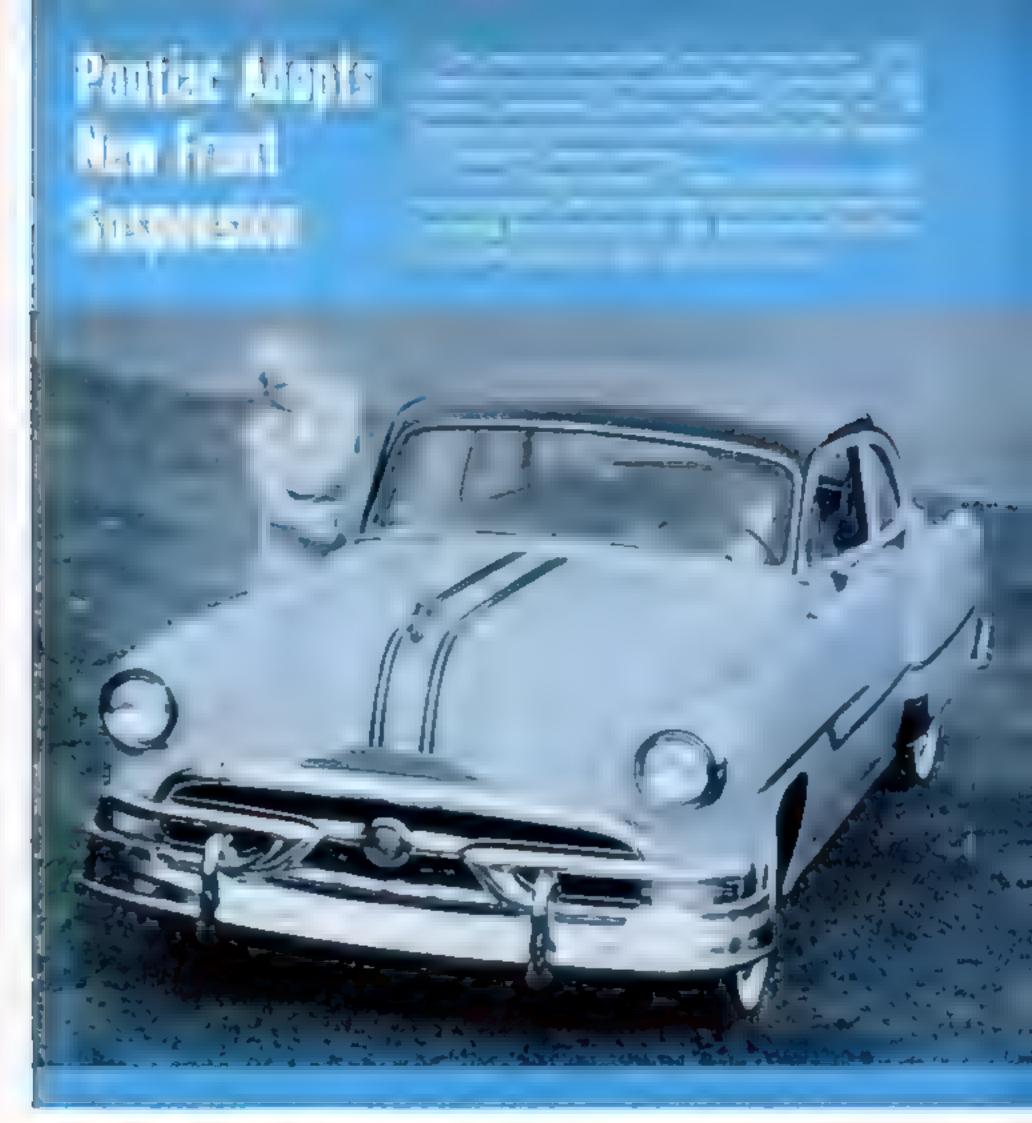

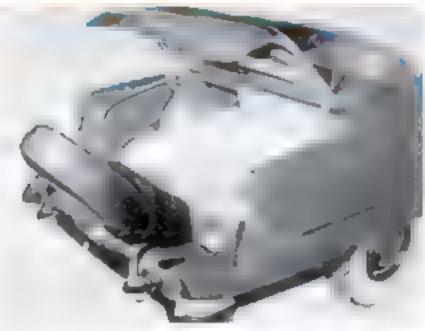

Willys Introduces Hard-Top Convertible for 1953

A HARD-TOP "convertible" was added last month to the line of Willys six-cylinder cars for 1953. Called the Aero Eagle, it is powered by the same 90-horsepower F-head engine used in the first Willys sedans produced since the end of the war (PSM, Jan. '52, p. 116).

All Willys models feature more rear-seat legroom. A four-door sedan, the Aero Lark, also will be produced.

Dodge Borrows from Past to Get Sports-Car Look

Appen to the 1953 his of Dodge cars (PSM, Nov. '52, p. 123) is the newly an nounced Diplomit. This model, like others originated by Detroit manufacturers in the last two years, was designed for a sports car look. The outside spare wheel contributes to the impression. Mounted on a trick locking hinge, it can be tilted back to get at the trunk interior without removal. Wire wheels also are available optionally.

We're spending only one-fortieth of a cent per cold to find a way out of our misery—and few scientists are helping us find it.

Isn't widespread misery enough of a goad to spur medical researchers on to finding a cure? Evidently not.

Colds keep 250,000 workers at home every day of the year, and put thousands more in a class with the walking dead, yet practically nothing is being done

In England You Can Have a Free Vacation If You'll Catch a Cold

OFF TO A BAD START, two British volunteers begin a "holiday" paid for hy a research clinic. The nose drops contain a cold virus.

2 WAITING FOR SNIFFLES, the girls play chess.

Medical staff is masked so as not to get or
give colds, which would confuse the tests.

\$400,000,000 a year to treat, yet we are spending only one-fortieth of a cent per cold to discover the cause and stop this huge, unnecessary expenditure.

Colds cost their victims a billion dollars a year in wages and rob us all of four billion dollars' worth of goods and services we might have had if the cold sufferers had been able to keep working.

Doesn't science know anything about what causes colds? Quite a little.

Virus at Work

As long ago as 1914, at least one clue to the mystery was found. That year a German physician, W. H. Kruse, discovered that a filterable virus was at work in a cold victim. He washed out the patient's nose, filtered all identifiable bacteria, and then inserted drops of it in the noses of healthy volunteers. The human guinea pigs came down with colds.

This was evidence that a cold virus existed. If it could be identified and grown in a laboratory, science might learn how to protect people.

Since then, the few scientists interested enough to investigate have found the same thing. They haven't yet been able to identify the virus—or, perhaps,

viruses. They don't even agree that the virus is entirely responsible for the cold.

Lack of money doesn't block research on the cause of colds. Dr. Victor H. Haas, of the U. S. Public Health Service, says he doesn't know of a single worthwhile request for research funds that is not being met. Another distinguished doctor declares that "those who wish to do so can always obtain financial grants-in-aid if they are qualified."

It's mostly lack of interest among competent medical sleuths that prevents us from getting rid of colds forever. Colds are drab and unexciting except to people who happen to have them.

Admittedly, though, there are problems involved in cold research. One of the biggest is that the common cold is well, common. It's easy to trace an outbreak of typhoid fever or smallpox to its source. Trying to track down the origin of a cold is like trying to identify the exact tree from which each fallen leaf on a wind-littered lawn came

Moreover, what seems to be a cold may be actually a mild attack of influenza, allergic rhimitis, an early stage of measles, chicken pox or polio, the result of inhaling certain fumes or dust, or even a by-product of emotional stress. Many a person catches a "cold" just be-

3 sour's on, but it must be left outside the girls' door. They have to be completely isolated from outside sources of infection.

fore he tackles a new job, takes an exam, hits the boss for a raise or has the highfulutin Joneses in for dinner.

The shifty character of the cold is one of the reasons why "cold cures" seem to work. The cures are often taken for conditions that only look like colds. For example, if you have allergic rhinitis, an antihistamine—most ballyhooed "cold cure" in history—probably will do you some good. If you really have a cold, it probably won't.

Man Is the Guinea Pig

A major roadblock is that there isn't any laboratory animal to help scientists in their experiments. You just can't give a cold to a dog, cat, rat, mouse, guinea pig, hamster, rabbit, squirrel, ferret, pig, hedgehog or monkey. You can give a cold to a chimpanzee. Dr. A. R. Dochez, of Columbia University's College of Physicians and Surgeons, proved that in the 1930s. But chimpanzees are expensive, strong, and opposed to being experimented on.

That leaves only man, who is a rather poor lab animal. However, the British have tried using him.

Since 1947, healthy English men and women between the ages of 18 and 50 have been offered a 10-day, expense-free

4 THE PAYOFF was anticipated, but it's no fun. Now researchers at least know where the cold came from, can study symptoms.

vacation in the cathedral town of Salisbury if they would let medical researchers there try to give them a cold. But very few people think a 10-day vacation at somebody else's expense makes up for catching a cold.

However, one of the British researchers, Dr. C. H. Andrewes, has discovered a useful fact. At least one cold virus is so tiny that it will pass through a filter having pores with a diameter of only 57 millionths of a millimeter. This makes it one of the smallest viruses known.

What's more, this little devil, in nasal fluid from some of Doctor Andrewes' cold sufferers, remains potent after being packed in dry ice for months. But when Doctor Andrewes tried to breed the tiny virus, as Doctor Dochez and his fellow researchers had earlier proved could be done in fertile chicken eggs, he ended up with something that would no longer cause colds. Why? Was it a different kind of virus?

U. S. Public Health Service investigat-

BREEDING COLD VIRUSES in a U.S. laboratory begins with inoculating fertile eggs with a

solution containing a virus. Often—though, mysteriously, not always—they multiply there.

ors five years ago confirmed the Dochez evidence that at least one cold virus can be cultivated. They even made the exciting discovery that they could tell by a chemical test whether or not the virus was present in a fluid. Then, like Doctor Andrewes, they ran into bafflement. After about a year and a half of breeding this particular virus, the strain apparently ran out. At least it would no longer produce colds. To make matters worse, when other scientists tried to use the chemical test on other strains of the cold virus, the test wouldn't work.

Test Shows Promise

A different test, being tried by Dr. Thomas G. Ward at the Johns Hopkins School of Hygiene and Public Health, shows promise. Using radioactive phosphorus, Doctor Ward has found that chick embryos infected with a cold virus seem to take up more of the tagged stuff than embryos with no virus.

Until there is a foolproof test for a cold virus, lab workers are fumbling in the dark. They can't be sure that they have what they want until they drop it into noses and the people come down with colds. Even then, they must be certain that those colds were caused by nose drops and not just colds that the

people would have contracted anyway.

Investigators have uncovered interesting facts about colds, which may or may not be related. At least they provide leads. Here are some of them:

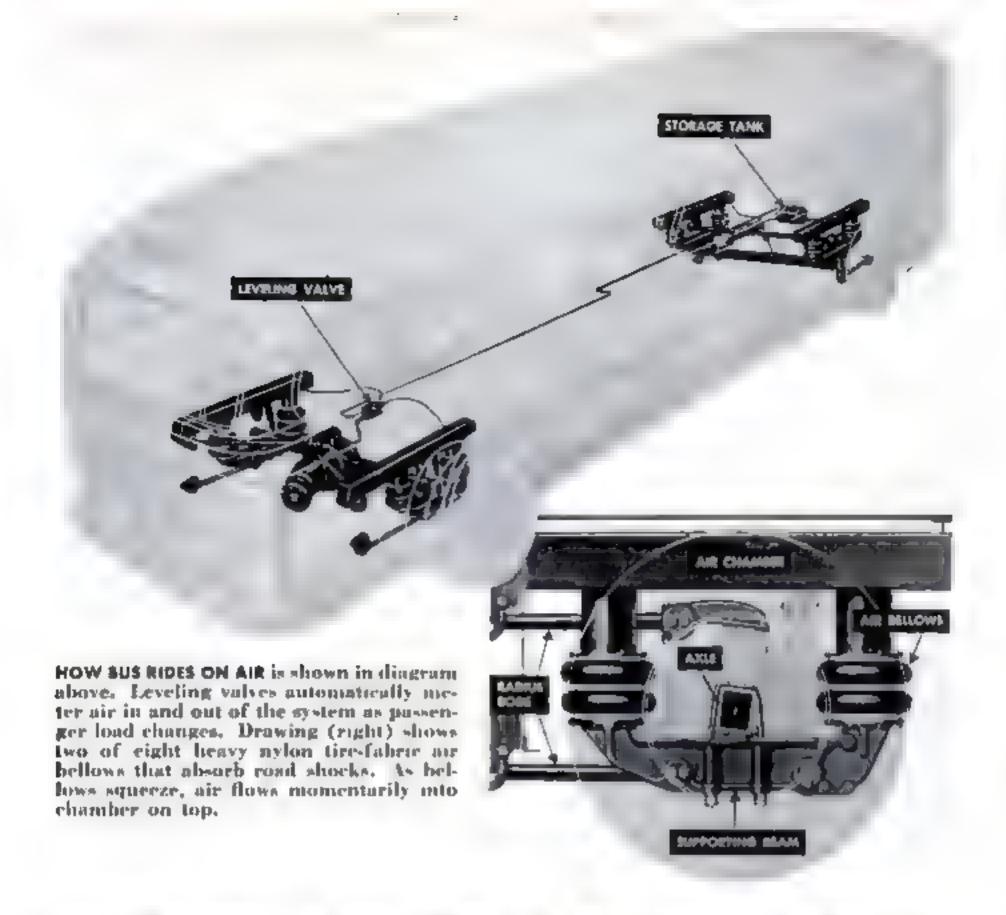

- You can't eatch cold by standing in a chilling draft, even when you are wearing a wet bathing suit.
- People who live on the arctic island of Spitsbergen have no colds between the departure of the last ship in the fall and the arrival of the first ship in the spring. Then the island is swept by colds.

Children Are Cold Targets

- Small children catch colds more readily from other small children than they do from adults.
- The closer and longer the contact you have with a person who has a cold, the more likely you are to catch it.
- The older you get, the fewer colds you have.
- Families with school children have three times as many colds as families with no school children.

Maybe if all the medical researchers were to come down with bad colds simultaneously, they would suddenly get mad enough to focus their skilled attention on the common cold and lick it.

Meanwhile, we sniffle and snarl. END

Air Springs Give Bus a Bumpless Ride

You board a new type of intercity bus just announced. It has no leaf springs at all. In their place are bellows containing nothing but air.

The air absorbs road bumps so perfectly

that passengers can read their magazines without a jiggle. Designed and built by the GM Truck & Coach Division, the new suspension system absorbs all types of road shock, from chuck holes to ordinary tiretread vibrations.

Bus seats 41 passengers behind 72-inch-wide "picture" windows, has over-all length of 35 ft.

JANUARY 1953 173

and coller that are blown up. Clear-plastic dome has wide openings for

breathing.

When the public takes to a bright idea it sends millions of dollars through the mails to these smart businessmen.

By Andrew R. Boone

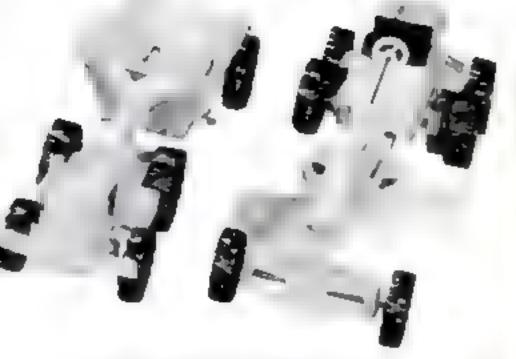

LITTLE did Arthur Godfrey dream, when he began strumming a ukulele on his TV-radio program in New York, that he would give a shot in the arm to an amazing industry 3.000 miles away.

Across the country in Pasadena, Calif., Charles W. Worley heard the Hawaiian strains. Next morning he huddled with his staff. A few weeks later he cradied in his arms a brown-and-cream ukulele all made of plastic.

Worley, like scores of other clever producers of toys, home wares and just plain gimmicks, then boarded the bandwagon to big sales throughout the nation. He operates one of 102 fast-growing companies in the Los Angeles area that cater to the whims and tastes of folks willing to entrust a dime or several dollars to the U. S. mail, The gimmick industry blossomed shortly after the war. Now it's in full flower, making fortunes for enterprising inventors and owners,

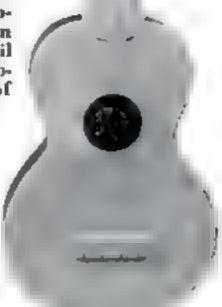

Worley started his BW Photo Utilities company to manufacture darkroom and photographic items. He found the market limited. Then he added low-cost novelties that could be sold by mail. Today he's turning out 80 individual offerings, from plastic iced-tea spoons for a nickel to ukes at \$3 a copy. Nearly 75,000 units are made in his plant every day.

The men who devise and sell these gadgets and gimmicks necessarily keep their eyes open for a hot idea. A small

EARTH MOVER AND SCRAPER are made of a tough molding plastic, copy real Caterpillar equipment. A million of them were sold by muil order in eight months.

MAUNA LOA UKULELE was rushed to production after Arthur Godfrey publicized uke on TV. It can be sold cheaply by mail because it is mass-produced plastic instead of traditional wood.

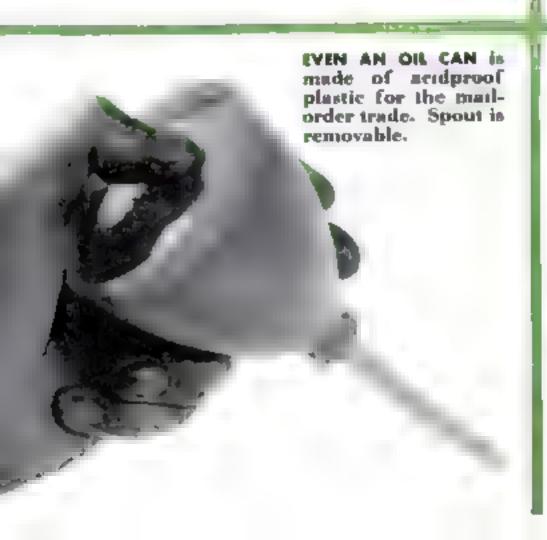

PLASTIC PISTOLS go big with kids. Top three, reading down, are frontier gun, automatic, and space gun—all water pistols. Bottom spring gun fires rubber-tipped dart.

PEEDING DISHES for very small fry are plante molded to look like trains and honts. Chow Scow (top) can be filled with hot water to keep food warm. Chow Chow Train (below) is big seller.

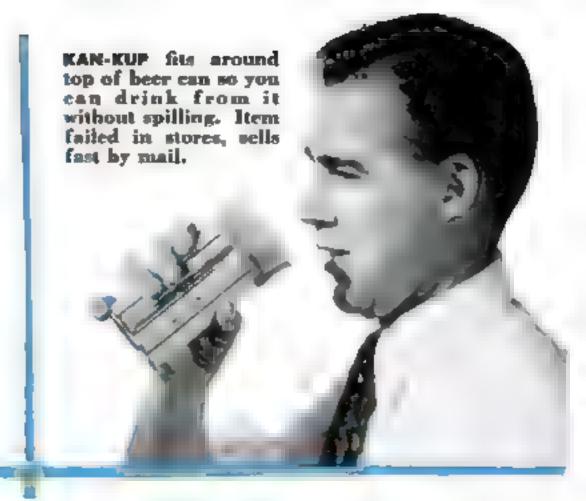

bome sells by the thousands each month. It displays medals or old watches hung by wire from top. Maker expects to sell 100,000 of this \$4 size in '53, Larger ones cost up to \$50 each.

fortune may be won or lost on a single item. Every time a new idea pops up, the manufacturer must figure on spending perhaps \$25,000 or more before it's rolling. Up to \$10,000 for dies. Another \$10,000 for materials, boxes and promotional literature. Maybe \$30,000 for advertising. Then the orders come in—or they don't. There's no sure way of knowing in advance.

Some Items Are Mail-Order Naturals

What makes a good mail-order item? Generally, says mail-order expert F. G. Berlin, it's an item that doesn't sell readily across retail counters. It needs words, and usually a picture, to explain it.

You can see a circular plastic collar alongside a beer can. What's it for? Berlin makes this simple collar. Before offering it through the mails, he tried it out in a Los Angeles drugstore. One day he approached the counter, asked the young sales lady to explain it. Picking up can and collar, she said, after a long pause. "Must be a coaster." Instead, the collar fits over the open end to make drinking easier. Since then, the mails have sold more than a million can collars.

Few gimmicks just happen. Hard thought and often long experiments go into their creation, Take "Pump-It." This is a pump, thinner than your little finger. It squirts catsup from a bottle.

A man walked into the Hollywood office of Clair E. Young, then manufacturing toys, and said, "Make me a gadget that will extract catsup from a bottle, and I'll sell a million." The first model wouldn't work. Other designs followed. At last Young came up with a model made of red polystyrene, clear poly, neoprene and stainless steel.

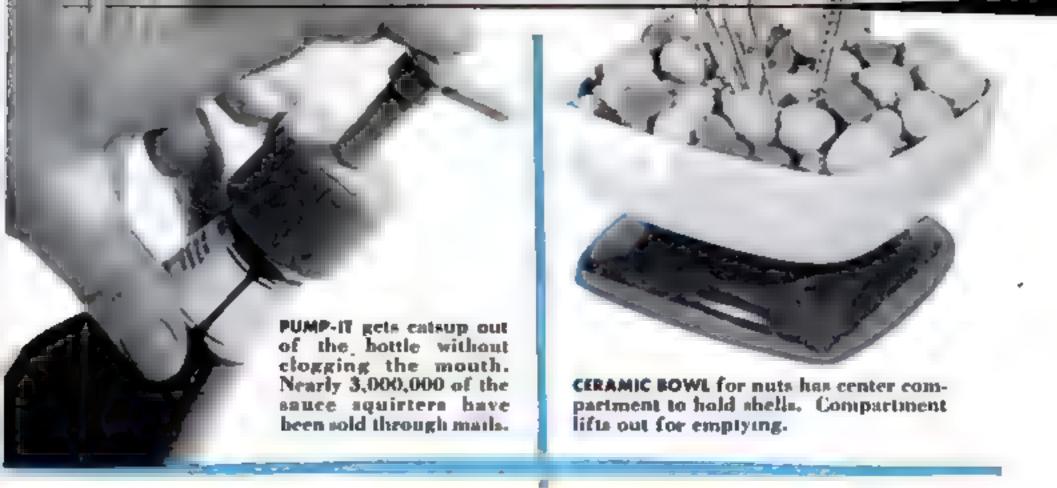

Then the blow fell. There was no customer for a million catsup pumps. Could a million customers be found for one apiece? A company was formed and an advertising campaign started, Shortly the pump began to catch on. Now the dies are busy, day and night, producing well into the third million.

One of the biggest winners in the race for sales is a simple little Lucite dome that stands on a base of hardwood. Berlin calls it a "treasure dome."

"There must be millions of homes with war medals and old watches rusting in old trunks and dressers," he reasoned. "Folks would get them out if only they had some way to display them."

Hot Cakes Sell Slowly by Comparison

Last April he ran two magazine ads. Sales were so good he upped his advertising, adding more magazines. Already he's taking in \$20,000 a month. He sells both directly through the mail and through other mail-order houses. In a two-week period, the Marshall Field store in Chicago, starting with an order for six dozen, increased its purchases to 500, then 1,000

Louis Glaser saw a group of children at play around a tractor on a construction job near his home one day. At that time, a year ago, mechanical toys of this sort were being made of metal, and were expensive. In plastic, Glaser reasoned, the price would come down to less than a dollar. But the toys would have to be authentic.

Glaser grabbed a plane for Chicago. There he obtained blueprints and permission from Caterpillar to use the company's name. From Dow Chemical Co., he secured a tough molding plastic. Last April he started production of a scraper, earth mover and grader. Both Caterpillar and Dow have mentioned the toys in advertising their own products.

Eleven years ago Leo White retired from his New York business of manu-

facturing dolls and toys. He moved to Los Angeles, intended to while away his days on the golf course. He couldn't stand the boredom, Shortly he rented space to "do a little tinkering." He became interested in plastics.

Squirt Guns for Little Squirts

His tinkering grew rapidly into a line of molded housewares. Then came toys. Among them a little polystyrene water pistol you can hide in your hand. Its diminutive pump squirts 200 shots at one filling. Kids bought 2,000,000 the first year, came back for 5,500,000 the next, grabbed 9,000,000 last year. White expects to sell 15,000,000 in '53. His machines grind out the little squirters 24 hours a day, 360 days a year.

These grab-the-main-chance boys sel-

Here's What Experts Want in a Mail-Order Item

HERE are eight characteristics of the ideal mail-order product, according to three experts whose views were reported in the magazine Advertising Age.

- A product that everyone needs or can use.
- A price between \$2 and \$5, making installment payment unnecessary. (If no repeat business is possible, say the experts, the selling price should be four times the product's cost at the warehouse.)
- A value that can be explained easily to the

- reader of the original advertisement.
- The possibility of a repeat sale of a similar or related product.
- Exclusive features or a patented design that shuts out store competition.
- No quick deterioration—otherwise product loses value if not delivered promptly or is returned.
- A product easy to pack, cheap to ship.
- A product that needs little or no servicing after delivery.

dom rest on a single success. In White's Knickerbocker Toys plant I saw his future plans taking shape. Soon he will offer kids a submachine gun that squirts a stream of water 60 feet.

Bernard Glukes, an aircraft engineer, sat in his home one evening studying pictures of snowflakes. He noticed that some forms seemed capable of interlocking. This simple observation led him to whittle out a dozen models, all exactly alike. By putting them together, he discovered he could create interesting forms. Now he's drawing royalties from a Los Angeles manufacturer who turns them out in colored polystyrene.

Space Men Chase Cowboys Out of Picture

Children's whims govern the toy output. The cowboy is passing, the space man taking his place. That's why kids are grabbing up Barney Rosson's space helmet. Looks something like the latest Air Force helmet designed for wearing with a pressure suit. A kid blows up the vinyl plastic tank and oxygen tubes, dons the acetate butyrate helmet, and he's set for a trip anywhere his imagination carries him.

New ideas flow from these enterprising people every week. Maybe it's a metal gimmick that holds a bot egg while you crack it. A paneake griddle with built-in thermometer. A meat saw with grooved handle for tenderizing tough meats. Holders for spoons to prevent dripping. Or tweezer needles for patching torn clothing.

Some come from the proverbial garret. Following his discharge from the Air Force eight years ago, Jack Bozung began designing soap paints that would wash off easily. He mixed them in his garage at home, Paints led to black-boards for youngsters, Today his Celeo Corp. has 60 employees, grosses a million dollars a year.

Hit the Jack Pot-or Lose Your Shirt

W. R. Moody started his successful luggage-tag business in his living room. The personalized tags, plastic stamped with name and address, overflowed into a Burbank shop where 12 workers will turn out \$100,000 worth of tags this year.

But a new item may be a dud, Its promoter will soon know if orders fail to arrive. S. W. Barrett has offered more than 800 different things in eight years. Only a few rang the bell, A metal rack for hanging skirts failed to click until he added a hook at one end, permitting it to be suspended horizontally for drying ladies' hose. Now it goes by thousands.

There's no sure-fire rule for success in this business. You may hit the jack pot or lose your shirt.

"You pays your money," says Barrett.
"and takes your chance." END

Car Tips Its Bonnet Hydraulically to Bare Engine

It's no trick to get at the Ford V-8 engine of this Monte Carlo Saloon Allard. The whole front part of the ear, which is hinged behind the bumper, raises and lowers hydraulically like the tops on American convertibles.

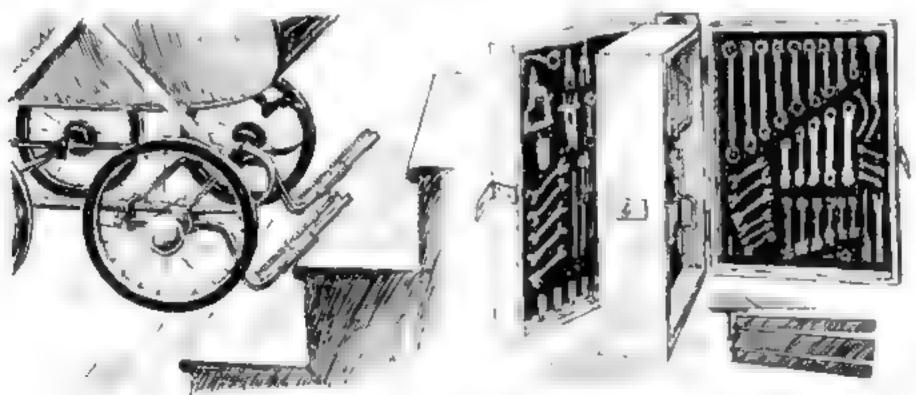

The British right-hand drive leaves plenty of room for a spare tire at the left of the engine. This model has de Dion rear suspension, previously used mainly on competition cars. The car costs about \$4,600.

28 POPULAR SCIENCE

1 Alarm to Foil Thugs. A siren run by flashlight cells in this pocket-size alarm would rout a thug and summon aid. If danger threatens, you would press a button to lock its switch on. There would be no

way to turn off the noise, which would continue until the battery ran down. The device is intended to safeguard men and women who must travel along lonely streets at night, as well as messengers carrying money.

2 Carriage to Climb Stairs. Up and down steps, this baby carriage could be handled smoothly and easily. Tubular slides on the undercarriage engage a stair tread while the wheels are lifted past its edge. Then, springs return the slides to their former position. Street curbs would be negotiated in the same way.

3 Toolbox to Open Like Book. Mounted on the wall over a bench, this tool cabinet would take up no bench space—and would store more tools in plain sight and easy reach, the inventor maintains, than any he has seen. Three hinged sections open like pages of a book, as above, or swing back to fold together and close (inset).

5 Brush to Open Paint Can. You wouldn't have to hunt around for a screw-driver or other tool to open a paint can if you had this double-purpose paintbrush. Its handle is fitted with a notched metal tip that's designed to hook under the can hid and pry it off.

6 Fork to Tame Spaghetti. Picking up long, shippery strands of spaghetti would be easy with this rotating fork. You just twirl a knob in the handle and it spins the tines so that they quickly wind up the spaghetti in neat coils without your having to twist the fork itself.

Patents on these inventions have been granted to: 1. Anthony Metolo, Pittoburgh, Pa.; 2. Hurley M. Creveling, Elizabeth, N. J.; 3. Alfred E. Grennan, Benton, Kan.; 4. Edward G. Fischer, Bollisson, Mass.; 5. Emerson T. Oliver, Marblehead, Mass.; 6. Philippe Piche, Valleyfield, Que.

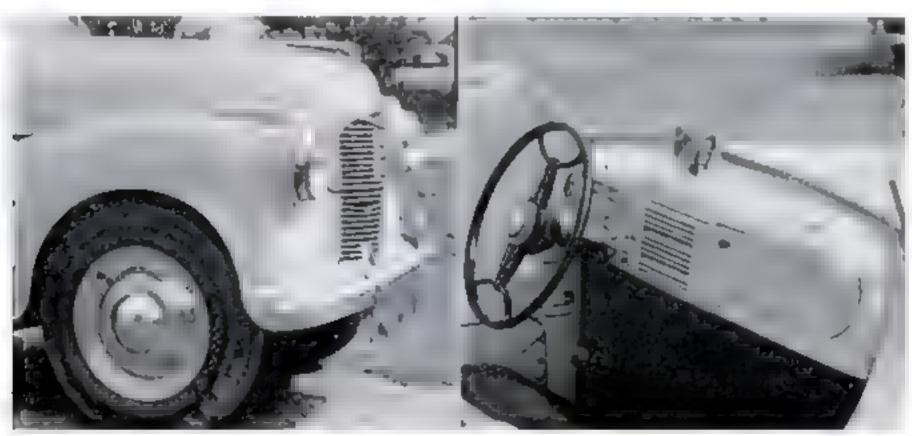

LESS THAN \$125 was Larry Miller's total each outlay for this unique little sports job, which

was reborn from the burned-out wreckage of a 1948 Austin. Note absence of chrome trim.

Junked Austin Makes Trim Sports Car

A COUPLE of years ago, Larry Miller parted with a sawbuck and a fin and became sole owner of a burned-up Austin. Subsequent investments included \$19 for a battery, \$65 for tires, \$25 for upholstery and two years' spare time. Result: the neat little three-seater pictured here. Like boardinghouse hash, a little bit of everything went into it. Among the baby sports car's an-

cestors are a '50 Ford truck (dashboard), a '49 Ford (its hood is now the Austin's rear deck), a '41 Chevvy truck (headlights), a '41 Olds (steering wheel), a '41 Ford station wagon (seat), and an Olds "88" showroom model (windshield is cut from transparent hood used to display Rocket engine). Spare parts and paint were easy—Miller runs a body-and-paint shop in Magnolia, Ark.

THE FRONT of the new sportster is standard '48 Austin except for the headlights, which came from a 1941 Chevrolet truck.

THE DASH PANEL and cowl of a 1950 Ford pickup truck were cut down to fit. The wheel and shaft once steered a 1941 Oldsmobile.

Oskar Lebeck and Alden McWilliams dreamed up a world and made it pay by picturing it on the comic pages—for 10,000,000 readers.

MORE than 10,000,000 newspaper readers are all excited about the discovery of a new planet, a twin of ours. But no astronomer has given it a second thought. That's because Terra, as the new planet is called, was found, not in the heavens, but in a cartoon strip.

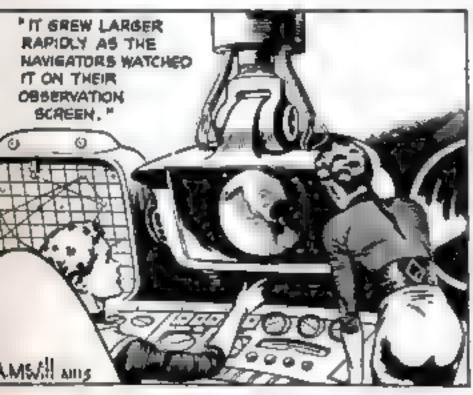

The strip, "Twin Earths," is a spectacular newcomer itself. It got off to the fastest start in newspaper-syndicate history, and has spun to stardom at flyingsaucer speed.

Oskar Lebeck, of Croton-on-Hudson, N. Y., who thought up "Twin Earths," and Alden McWilliams, of Noroton Heights, Conn., who draws it, have "created" quite a planet.

In the first place, we can't see Terra. It is the same size and composition as Earth, and the same distance from the sun, but it is on the other side of the sun. And because it travels in the same orbit as the earth and at the same speed, we never will be able to see it—except by space ship, in future installments of "Twin Earths."

By all the rules for adventure-strip writing, "Twin Earths" should have been a bust. It makes no attempt to interest children. It doesn't even try to appeal to all adults—just those who are interested in science. And its fantasy isn't very fantastic.

Lebeck and McWilliams, whose homes

EARTH IS DISCOVERED by some girls from Terra, our twin planet, on a flying-saucer trip.

THIS WAS IN 1903, according to "Twin Earths."
Yans, heroine of the strip, is the narrator,

Planet

are only a few miles apart, keep nine or 10 weeks ahead of their readers. One plots, the other draws exciting events on this planet and on Terra, and then they smooth out details in weekly meetings.

Both Have Artistic Talents

Lebeck, nearing 50, was born in Germany. His career has included illustrating children's books, designing stage sets, textiles and furniture, and being the highly successful art director and managing editor of a publishing company. Two of his brainstorms proved highly prophetic. "Stratosphere Jim" and "Rex, King of the Deep" concerned superfortresses and submarine plane carriers with catapult launchers long before such craft were developed. He is undoubtedly just

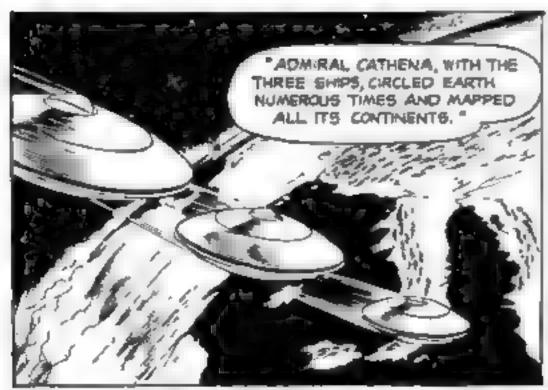

AFTER 14 YEARS of creating comic books together, Oskar Lebeck (at left above) and Alden McWilliams are an expert team. They hit few snage in plotting and drawing "Twin Earths."

as clairvoyant about some of the marvels of "Twin Earths," but he doesn't believe that space travel is in the cards—except in comic strips.

McWilliams, 36, showed talent as an artist when he was a child, but he has never studied mechanical drawing or been a draftsman. Despite this, for the advanced life of Terra he confidently designs two-way TV sets to fit women's handbags, walnut-sized walkie-talkies, and other electronic wonders.

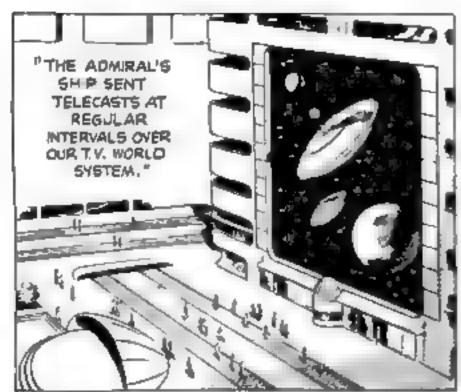

He doesn't use models for any of his futuristic gadgets, though he sometimes has to raid his 34-year-old son's garage

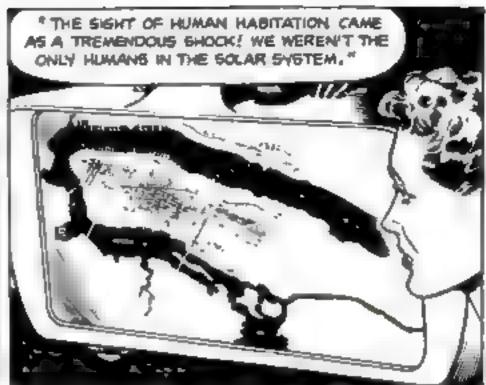

LIKE COLUMBUS the admiral from Terra who saw us first led a squadron of three "ships."

AN ALL-GIRL PARTY found Earth, Men are very scarce on Terra, "Twin Earths" reveals.

OUTDOOR TV SCREENS of mammoth size supposedly have long been in use on twin planet.

NOSODY HERE BUT US NUMANS, the girls from Terra found in a saucer's-eyeview of New York.

ACCORDING TO VANA buses that run on two wheels at top speed used to tear across Terra.

TRAFFIC GOT TOO HEAVY so the people of Terra abolished both automobiles and big cities.

of plastic cars when he needs help in visualizing an automobile from an unusual angle.

Lebeck, who has always read every book he could lay his hands on, spouts ideas at such a rate that he writes a week's six strips in an hour and a half.

When McWilliams tackles the same six strips, he usually completes his drawings in 4½ days, working from nine to five-thirty, with only a half-hour for lunch.

Young Woman Does Lettering

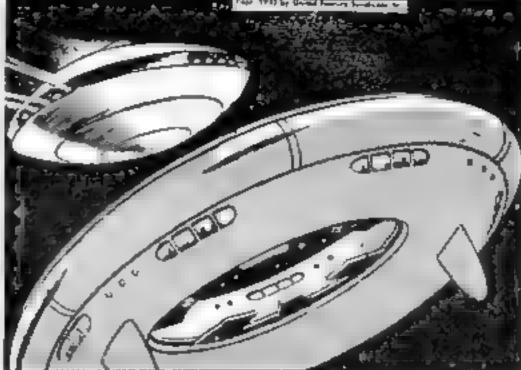

When the drawings are finished, Mc-Williams takes them to a young woman who makes a specialty of lettering the balloons (what the characters say to each other). Then they are ready for reproduction and distribution by the syndicate to newspapers, which pay from \$3.50 to \$150 a week, depending on circulation, for the right to print the strips.

In "Twin Earths," Lebeck and McWilliams passed up the science-fiction tendency to provide billion-mile rides between meals. They hung our twin planet in the skies only a short space hop away.

Terra is a peace-loving planet, too. That is rare indeed in these days when the writers of fantastic stories are so inclined to indulge in bloody encounters between humans and armies of little green monsters, animal or vegetable.

The friendly people of Terra are curious as the dickens about us though and, as the story of "Twin Earths" opens, have

VANA IS VINDICATED for "Twin Earths" fans when the FBI checks on her with a telescope.

WHAT THE FBI SAW was a space station from Terra that Vana said was "watching" us.

TERRA'S AUTOPLANE, as visualized by McWilhams, is a combination car and flying saucer.

landed a few beautiful women here to look around and report. One of them, Vana, is the heroine of the adventure strip. The hero is an earthling, an FBI man named Garry Verth.

It was quite logical, as well as romantic, for Lebeck and McWilliams to select a woman as a spy for Terra because the twin planet they have pictured is almost entirely a woman's world. The men had largely succeeded in wiping themselves out in periodic wars when a plague came along that destroyed the male hormones of most of the survivors. Only a handful was left to keep the race going. For hundreds of years Terra has been 92 percent female.

Those Terra girls have the edge on us,

too, in science and technology. According to Vana, they wear indestructible fabrics that repel or attract heat. They also eat synthetic meat, build things of weightless metals, and live in Polaroid houses that turn with the sun.

Terra Had No Luck with Rockets

Terra's women scientists experimented with rocket building but gave it up, the authors of "Twin Earths" assert.

About 1903, readers of the comic strip learn, the Terra girls developed flying saucers. The choice of that date was as carefully calculated as the many other details with which Lebeck and Mc-Williams have crowded their strip. That

England Builds De Luxe Sportster with Automatic Overdrive

You're looking at what England calls the chenpest 100-mile-an-hour car ever built. It's the Healey Hundred and will sell here for \$2,350. Powered by an Austin engine it can hit 100 from a standing start in 37 seconds or cruise 35 miles on a gallon of gas. Secret of the car's high speed and low

fuel consumption is said to be an electrically controlled overdrive which cuts in automatically when the speed reaches 50 miles an hour. The sportster recently smashed the Belgian national record for cars of its class, covering the kilometer (% mile) at 111.73 miles per hour.

Observation Car Rides Up Front

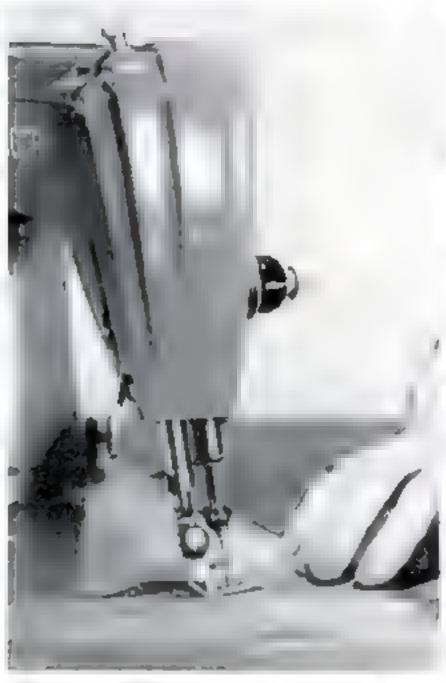

PASSENGERS see where they're going, instead of where they've been, on this new Italian electric train—they sit right up front. The door behind the sweeping fenders is the engineer's entrance. He sits in a cockpit behind the passengers, watching the tracks from the bubble on the roof.

German Cutter Slices Coal

THE miner below operates a German coal cutter under test in the U.S. as a way of saying wasted coal. Slicing off two tons of soft coal a minute, it sneaks into narrow veins too small for conventional equipment. It pushes the coal onto a conveyor as it moves along a vein at 75 feet a minute

Slanted Needle Easy on Eyes

For greater visibility, the needle and presser bar on this home sewing machine are slanted at an angle toward the operator. The machine weighs less than 16 pounds and can be removed from the cabinet and carted off to sewing bees outside the home. Singer makes it.

BECAUSE knocking down and reassembling a propeller takes three or four mechanics from six to eight hours for each operation. Peter Dunstan, maintenance foreman at Pan American's London base, worked out a gimmick to ship props ready for use. A pedestal built into a DC-4 supports the prop (left

Bus's Scope Sees Over Crowd

With one eye to a periscope like a submarine commander, this German bus conductor can see what's happening at the exits even in rush-hour traffic. A passenger won't be carried a block beyond his stop because the bus won't be started until the periscope shows the doorway all clear.

below). One blade protrudes through a slit in a door on the port side of the plane (right below). A window on the starboard side is fitted with an aluminum sheet with a slit in it to take another blade. The two tiny wings poking through the sides of the ferrying plane have no effect on its performance.

Industry Clamors for Trained Men

IF YOU were graduating from engineering school next June, you'd bave a lot of callers coming. Industry's man hunters are already prowling from college to college. Most of them want engineers first of all. But they are also on the trail of chemists, physicists, metallurgists, geologists and other scientists.

This seller's market for science talent is big news for boys and girls who are nearing the end of high school and are planning what to do next. For not only is the demand for science talent paying off with good jobs for graduates. It is also making it financially easier for bright young people to get a science or engineering education today than at any other time in the past. If you've got the brains, don't worry about the money.

The colleges are doing a lot to help good students through school with loans and grants. The Government is lending a hand with thousands of scholarships. And American industry itself is paying out a lot of good hard dollars to ensure a future supply of the brains it needs so much.

Why so much interest in scientists and engineers? Because we're short of them-desperately. Here's the situation:

• Trained brain power has become more and more important to industry since World War II.

At the same time. Government is drawing in specialists by the hundreds to man weapons-research and atomic-energy plants.

 Fewer engineers and scientists will graduate in June than in several years past

A slice of those who do graduate will be claimed by the draft.
 To get the men they need, the agents of industry are ready to pay high salaries. And they have their answers ready for tough questions about company policies and opportunities.

P. O. BOX 2

DOED NICHT IEDEEN

are basic in these fields. To make an engineer, you start with a mathematician. The boy who is good at geometry and algebra has the right start. He needs more: imagination—and a burning curiosity about why things happen.

The second, and tougher, question is:

How do I get there?

Your first step is to stop thinking about "college" in general and start thinking about specific places. Should you stay home or go away? About two-thirds of the cost of college is board, room and transportation. Tuition—what you pay for being taught—is the smaller part although it looms much larger in private colleges than in state universities.

You often can do a year or two of

Most scholarships cover a year's tuition. That's \$600 or more in the big private institutions. Places like Harvard, Yale and Princeton have some scholarships that pay a man's full expenses.

No college has enough money to help all its needy students. But in some institutions, one out of four is getting aid.

The big news is that, if you are The Guy, industry, too, wants to help you. Big companies started helping college graduates go on with advanced study and research a long time ago. Now, many businesses are concerned with the able high-school graduate who lacks funds to go on to college.

Suppose you are a good student, standing well up in your class, quick at math

CHEMIST. Dr. Ross M. Hedrick hit the headlines this year as the co-inventor of Krihum, Monsanto's soil conditioner (PSM, March '52, p. 106). Dr. Hedrick went through the University of Illinois with the help of a state scholarship. Awarded competitively to three boys in each county, this paid four years' tuition. In addition, the National Youth Administration (no longer in existence) paid him \$15 a month for the first three years. He earned most of the rest of his expenses by farm work in the summer and odd jobs in the winter. Dr. Hedrick went on to earn his master's and doctor's degrees at Indiana University with the help of a graduate assistantship, partly underwritten by the Council for Medical Research. Now 31, Dr. Hedrick has just been made a group leader in Monsanto's Central Research Dept., Dayton, O.

spadework in the local college and shift to some big place to finish up. Before starting, though, you need to know whether you'll be able to transfer. Most state universities will take students starting their sophomore or junior year. Many private institutions will not, but some, like Case Institute of Technology and MIT, admit a limited number of men after two or three years in such colleges as Beloit, Oberlin and Carleton.

Many men travel long distances, at a real sacrifice, to get what they figure is tops. The big institutions welcome them. They want a student body that represents the best from the entire nation. To get it, they have large scholarship funds.

and eager for engineering. How does industry find you? It doesn't. You have to find it. Some companies place their bets through the colleges. At Carnegie Tech, for example, you might be helped by aid provided by Westinghouse. At any one of 19 major universities—such places as Columbia, Notre Dame, Washington, Wisconsin—you might get the \$800-a-year RCA scholarship.

Be Prepared to Answer Questions

To get this kind of help, you go through the regular college offices. You apply for scholarship aid when you seek admission. You can expect the college to ask some sharp questions to make sure you really need the money. But you will AERONAUTICAL ENGINEER. Dr. William J. O'Donnell is chief development engineer at Republic Aviation, Farmingdale, L. I.—builder of the Thunderjet fighter. He entered tuition-free Cooper Union in New York City by competitive examination; won a \$300-a-year Emil Schweinberg scholarship to help pay his other expenses by standing each year in the top 10 percent of his class. His graduate work in mechanics, which won him a Ph.D. from Catholic University in Washington, D. C., was paid for by a scholarship that supplied room, board and tuition. This was one of 25 Knights of Columbus scholarships, awarded competitively.

know when you are accepted whether you can count on financial help.

If your father works for the Ford Motor Co., you may find the help close to home. Right now, Ford is helping nearly 150 sons and daughters of employees through college. The company itself picks those it will help, using a careful scholastic-aptitude test. A boy who comes out on top is free to choose any college in the country. For four years Ford pays his tuition and fees and, if necessary, up to \$750 a year expenses.

If you are going to a Long Island high school, you can ask for aid from Grumman Aircraft, which picks a number of boys to help each year. Each boy can go to any engineering school he wants. Grumman pays full tuition, and gives the boys summer jobs to boot.

The Foundry Education Foundation offers similar help primarily for men already in college and studying metallurgy. The American Institute of Steel Construction gives ten \$1,000 scholarships for civil-engineering students.

New companies are developing scholar-

ships every year. It pays to watch for them. Dr. H. Norman Feingold, an authority on scholarships, reports that one \$500 scholarship in Greater Boston a few years ago was awarded without a contest. Only one boy applied.

Veterans Get a Special Break

One of the best scholarships around right now is marked "for veterans only." Two years' service in the Army, Navy, Air Force, Marines or Coast Guard in the Korean War period entitles you, if single, to \$110 a month for four years of college. (If married you get \$135; if married with children, \$160.) This is paid directly to you, and you pay all your own college expenses. In the big schools, the G1 aid won't cover everything—but it will get you off to a good start.

With this veteran's scholarship ahead, many high-school graduates can use a hitch in the service to grow a little and get ready for college work. Some boys are "late bloomers." They develop slowly in high school, but spurt later. There

[Continued on page 246]

PHYSICIST. Dr. Walter L. Brown, a research scientist for Bell Telephone Laboratories, got help from Uncle Sam for his education. For two-thirds of an accelerated college course he received board, room and tuition at Duke, and \$65 a month—all from the Navy V-12 program. During four years' study for a Harvard Ph.D., he drew \$125 a month under the GI bill. In addition he held a \$100-a-month fellowship for the first two years in return for part-time teaching. A Shell Oil Co. pre-doctoral fellowship paid lab expenses and college fees for most of the last two years. With Bell since 1950, Dr. Brown is now doing research at Murray Hill, N. J., on germanium, the element used in transistors.

New British Jet Speedboat Aimed at 200-M.P.H. World Record

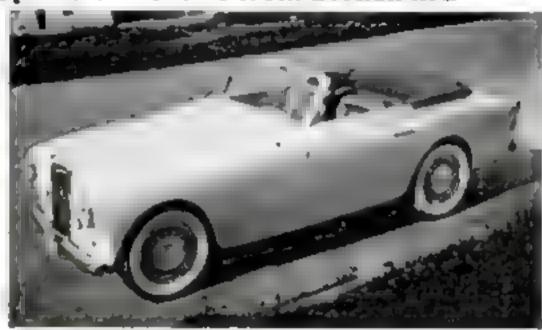

This jet-powered speedboat was clocked doing 90 m.p.h. during trial runs in Britain this fall. Mrs. Stella Hanning-Lee, wife of the owner of the boat, aims to drive the

White Hawk beyond the record set by British speed ace John Cobb. Cobb set an unofficial mark of 206 89 miles an hour before he was killed when his craft exploded.

New Combination Family-Sports Car Grows from British MG

HERE's a brand-new family-sports car, the Arnolt, Built on an MG TD chassis and powered by an MG engine, the convertible model at right weighs only 20 pounds more than the TD roadster, yet seats four instead of two. A hard-top model adds another 20 pounds, Bodies are built by the Italian designer Bertone.

Both cars are in the \$3,500 class and are distributed by S. H. Arnolt, Chicago.

Low Camping Trailer Raises Roof to Give Standing Room

IF YOU'RE in the market for a lightweight camping trailer that won't block rear-view vision from your car, here's a tip from John Dudley of Anaheim, Calif.—build it yourself.

The body and top of the collapsible, 800pound job below were formed over plaster molds by laminating glass-fiber cloth and plastic. After curing, the body was fitted with wheel boxes, a plywood bottom and an angle-iron frame.

The top is raised by a crank, pulling up waterproof canvas sides (right below). Inside is space for a bed, folding table, stove and cupboards.

QUARTER-SCALE LOCOMOTIVE, drawing a tender and two cars, leaves terminal of Santa Ana Canyon Miniature Railroad. Red. white and black train is named Victory Special.

CAB OF ENGINE, like over-all design, is ecduced-scale version of Norfolk & Western's Pacific type. Firebox burns three gallons of oil hourly to make steam for hauling train-

Family Runs Own Railroad

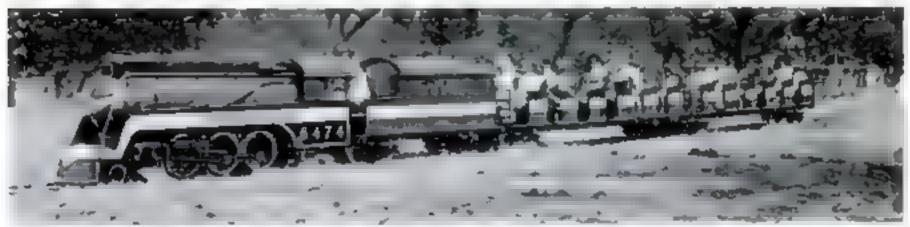

DRAWN by a miniature steam locomotive, this two-car train delights a load of kids by starting with a whistle blast, hitting 20 miles an hour, ringing a bell at a crossing, and rumbling through a tunnel It gives ticket-buying passengers a milelong ride through Santa Ana Canyon, Calif., and back to the starting point.

A family-owned enterprise, the line was built by Phihp Martin of Los Angeles, a toolmaker at the Baldwin Locomotive shops prior to his recent death, and his wife. Currently Phil Martin Jr. acts as the train's engineer and a son-in-law, George Hale, lends a band.

SPRINGS IN CARS' TRUCKS came from valves of Diesel-truck engine. Miniature 18-inch-gauge line has mine-railway rails, fastened with spikes to four- by six-inch wooden ties.

Highballing along straightaway part of its run, Victory Special hits top speed of 20 m.p.li.

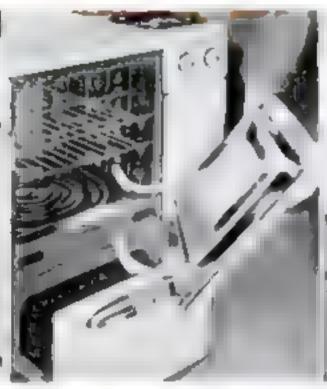

What's New on the

1. Controls Are at the Back. Lattle fingers can't reach to the back of this stove to turn on the gas. But set on top of the back panel, the knobs are easier for the cook to see and use. The stove also has a Dutch oven bug enough for a roast and a chrome broder tray that goes right to the table.

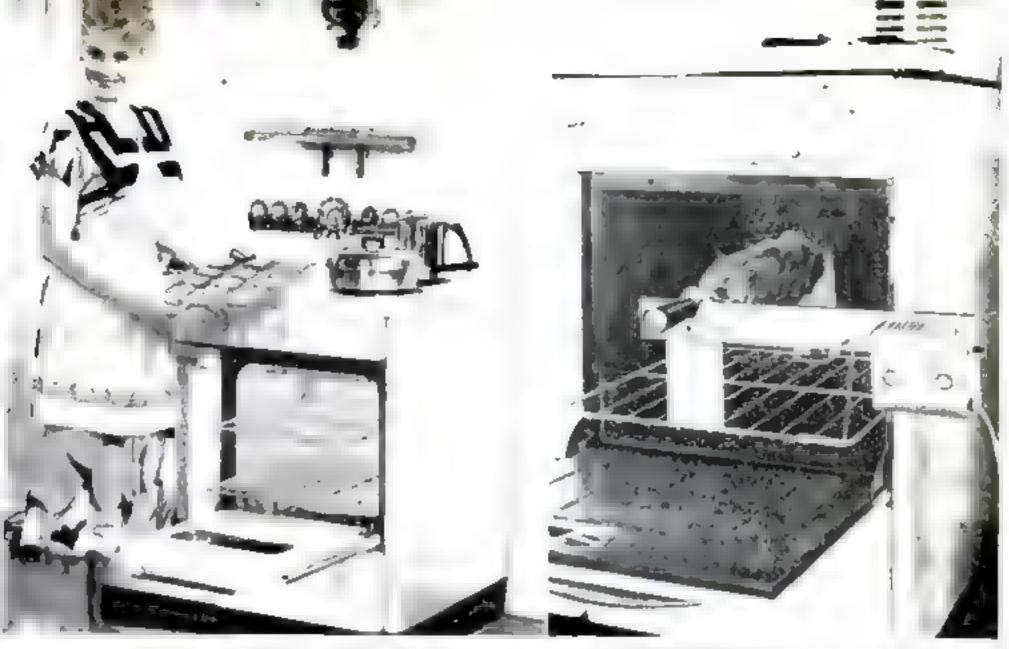

4. Safety Knob. This control turns on the stove only when pressed in firmly so teeth mesh. Once stove is turned on or off, knob returns to safe position. For gas or electric ranges.

5. Door Lifts Off. With the door removed, it's a cinch to clean the back of this oven. And the whole front is exposed. You can slip the door out and book it back on without tools.

6. Foot Opens Broiler. Toe pressure on a pedal brings this broiler out to view. Drawer opens to full length of pan so largest steak can be turned without interference from range.

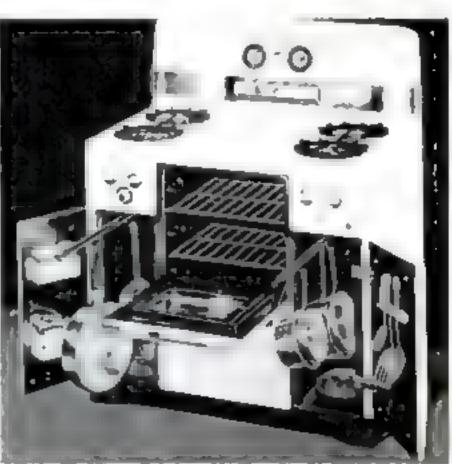

2. White All Over. Lined with white porcelain and fitted with removable rack guides, the oven of this range is as easy to clean as a china bowl. An electric range, it also has a food-warming drawer heated by a 1.000-watt thermostatically controlled unit.

3. Indoor Barbecue. Any electric stove becomes a barbecue with this rotisserie. It will spit a turkey or a haunch of venison weighing up to 25 pounds. It works on AC, can be set up or taken down in minutes and is said to cut one-third off cooking time.

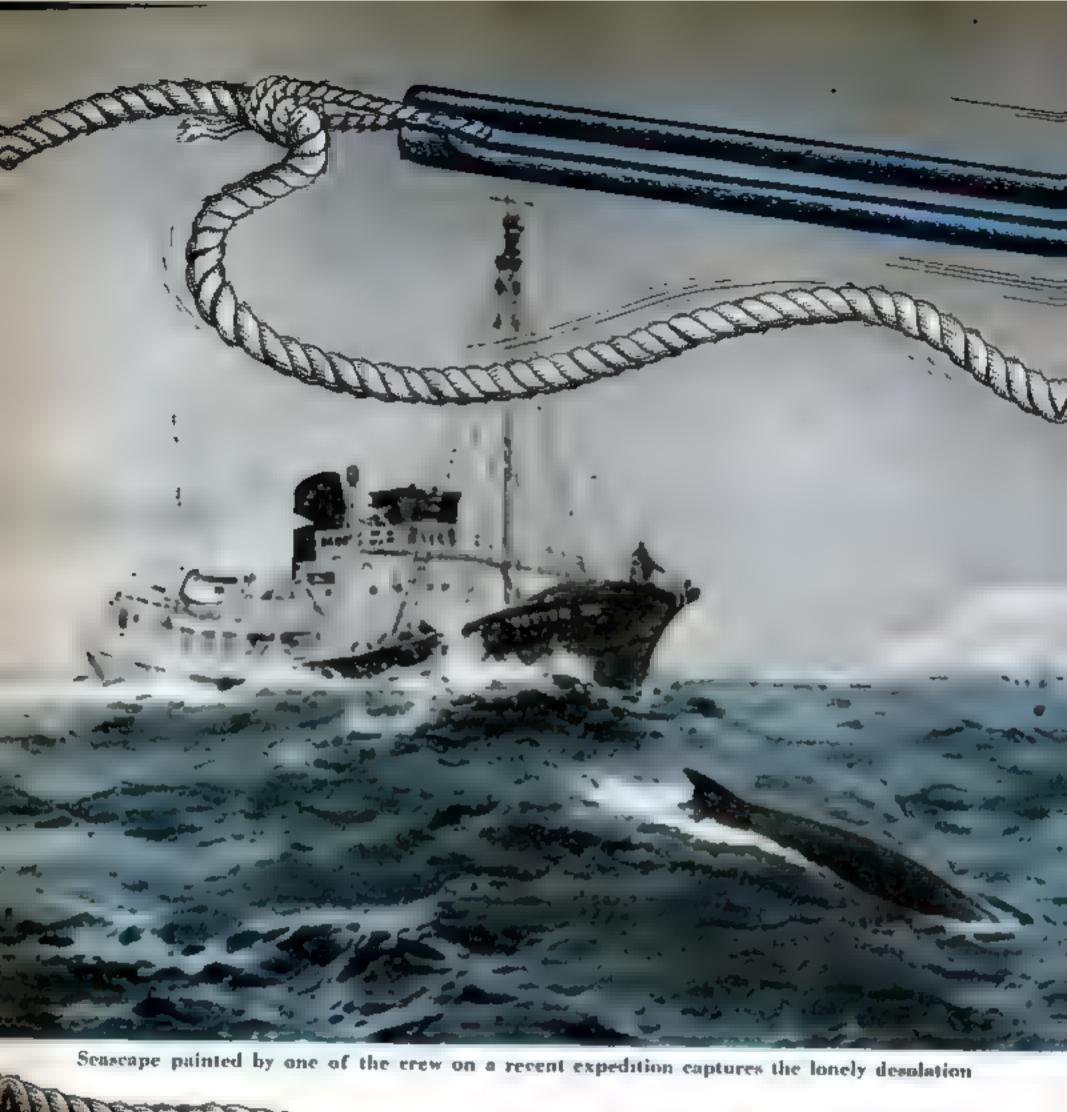

7. Topside Oven. The baby oven on top will often serve in place of its big brother and save gas. The broiler at left of the regular oven has a metal grid heated by the burner for radiant cooking.

8. Pick a Pan. Hiking cross-kitchen for a skillet or juggling a lot of nested pots to get one are chores the cook at this range can forget. Two compartments store pots and sliding racks bring the right one to hand.

When a 100-ton monster is tagged with this high-voltage weapon it's all over before the whale knows what happened,

By William McGaffin

"THAR she blows!"

The lookout in the crow's nest cries out as a column of condensed vapor pokes above the distant antarctic horizon. "Thar she blows, thar she blows," echo other lookouts.

of the antarctic whaling grounds.

CLOSE-UP OF ELECTRIC HARPOON shows head open as it is when lodged in the whale. The shaft is detached upon impact to prevent current leaking out from it into sea. Harpoon at top of page is in firing position.

The whale is seven miles away. Quickly the gunner reckons her course and steers his little catcher boat to be nearer the next time she comes to the surface to blow.

Twenty minutes later the huge baleen—big as a big house—comes up again. The boat is closer to her now and she is frightened.

She may dive again. But the gunner is unconcerned. Though her powerful body can streak underwater at 20 knots, the whale is an air-breathing mammal.

The faster she runs, the sooner she must come up to blow and refill her lungs. The old-time harpooner had to be rowed within hurling distance before she dived, but today's whale hunter rides a fast, steam-powered catcher boat and shoots from many yards away. He can bide his time.

When the gunner thinks he is near enough, he runs down the catwalk to the gun platform in the bow. With arm signals—antarctic wind makes shouting futile—he directs the helmsman. Maintain-

1 THE QUARRY IS IN SIGHT. Bundled up against the bitter cold, the gunner stands ready as the catcher bout closes in on the whale, most of whose vast bulk is hidden below the waves.

2 THE GUNNER TAKES AIM with the Kongsberg gun, also used to fire the grenade harpoon. One advantage of the new harpoon is that it can be fired from any type of whaling gun.

ing a precarious balance as the little boat heaves and plunges, he aims the harpoon.

He can see only about 10 feet of the whale. The rest of her 100-foot length is hidden beneath the surface. And in 3% seconds she will dive again.

He pulls the trigger, and in threequarters of a second the harpoon strikes. Electricity shot through the waterproofed rope attached to the harpoon then kills the whale in about two minntes. The lethal current comes from a

dynamo in the hunting ship and is controlled from a box on the bridge.

This is the new, humane way to kill a whale. Most whales are still being hunted with grenade harpoons, set with time fuses to explode inside the whale

If a whale is hit in the heart or some other vulnerable

spot with a grenade fuse, she dies. But if not, she fights like a tuna and has to be played. She may sound, go down 200 yards, or race away on the surface, towing the catcher boat. Her death struggle may last from 40 minutes to two hours. With the new electric harpoon, experimenters believe, the average time required to kill a whale and tie it up alongside the catcher boat will be cut to 10 minutes

With grenade harpoons, the average time is 50 minutes.

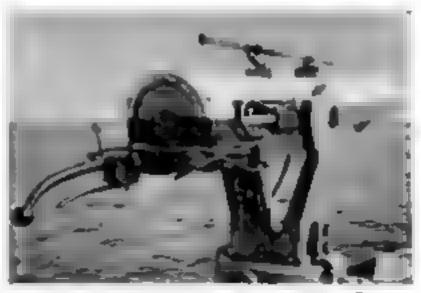

Old salts have admitted that if they could hear the cries of whales pierced with grenade harpoons they would never go to sea again. Whales can communicate with their mates underwater but make no sound audible to human beings

above the water except the snorting noise when they blow.

There are economic as well as humane reasons, however, for the interest of whaling men in the new harpoon. With it, the hunting season can be shortened, and the high cost of financing a whaling expedition to the antarctic can

be reduced. With it, too, the products can be better preserved. Some of the meat is spoiled when a grenade is exploded inside a whale.

A patent on an electric harpoon was applied for in London nearly half a cen-

THE NEWLY DEVELOPED SPIGOT GUN fires a smaller harpoon (2½ feet, 100 lb.) than the Kongsberg gun. Note trigger under the handle and bar sight on top of the barrel.

3 THE GUN IS FIRED and the 180-yard nylon forerunner, electrified with 250 volts at 50 cycles, spans out behind the four-foot, 140-th, harpoon. It strikes in less than a second.

4 DEAD WHALES ARE TAKEN IN TOW, Once a whale is killed, it is winched alongside the catcher boat and inflated with air to keep it affort on the way to the factory ship.

tury ago. But not until 1929 was such a harpoon used successfully. Dr. Karl Webber, a German engineer, then electrocuted four whales off the Norwegian coast. And since the war a new effort has been made in Britain and Norway by United Whalers, Ltd., cooperating with the General Electric Company of England and other concerns, to perfect an electric harpoon.

Biggest Whale Killed

Sir Vyvyan Board, the 68-year-old chairman of United Whalers, became so interested that he went down to the antarctic two years ago to live as a gunner and fire the experimental harpoon himself. With him went Robert Marsden, 50-year-old technical expert of the General Electric Company of England.

One of their problems was to perfect a rope. Pinelli-General Cables of Southampton, England, helped find a way to put a conductor in a nylon rope. About 200 ropes were built and tried before one that would carry the conductor satisfactorily was developed. It will stretch 45 to 50 percent under strain without breaking, and then return to normal.

Six experimental expeditions have now been conducted by Sir Vyvyan and Marsden since their antarctic trip. On their most recent trip, off the Norwegian coast, they killed the largest whale of the season. And on their return they told

5 THIS IS A WHALE'S JAWSONE on the factory ship's huge "flensing" deck. Here the whale's foot-thick blubber is stripped off and dropped below for cooking into whale oil.

6 CLOUDS OF STEAM rise up from below decks when the processing vats are opened.

Photos from General Electric Co. of England, and United Whaless, Ltd.

this correspondent, "The principle of electric killing is established to our satisfaction, but its application requires final adoption on the whale catchers and necessitates training present-day operators in the new system."

More of the United Whalers boats will be equipped with electric harpoons for the baleen whale season that begins January 2, 1953, but the whaling indus-

try is one of the most conservative in the world and will not abandon grenade harpoons overnight

In the last 100 years there have been only two big changes in this adventuresome business:

- The gradual introduction of the grenade harpoon, invented by Svend Foyn, between 1864 and 1873.
- The appearance of slipways on the factory ships in the 1920s. Until these were adopted whales were made fast alongside, as in the days of Moby Dick, stripped

of their blubber and then left to sink.

The electric harpoon will be just as revolutionary. Traveling 400 feet a second, it is faster than a grenade harpoon, which has a higher trajectory and an effective range 20 yards shorter.

The Kongsberg, Bofors or any other gun now used to fire the grenade harpoon can be switched over without modification to firing the electric harpoon. The only difference is in the length and

weight of the harpoon.

The adoption of a more humane harpoon, however, will not make a whaling expedition a pleasure cruise. During the past summer, the United Whalers fleet put in for repairs at ports in England, Norway and South Africa. In October it sailed to assemble at Capetown. From there it is proceeding now to the antarctic through the roaring forties and the even more ferocious fifties. At 52 to 53 degrees south latitude, it will begin to see floating ice and albatrosses. At 58 degrees, it will encounter the icebergs.

This fleet is a modern armada con-

sisting of:

 A 20,000-ton factory ship with a crew of 500. The whales are carved up on this and their blubber is cooked into oil.

A refrigerator ship that receives the

fresh whale meat as it is carved off the killed whales and freezes it for shipment home.

 A nursemaid tanker that supplies fresh water, fuel oil and equipment to the catchers.

Seventeen little boats
 —some of them 500-ton
 eatcher boats or killers,
 some 350-ton buoy or
 tow boats.

The catcher boats are low in the water, to make it easier to bring a whale alongside. But this also makes it easy, on decks constantly awash, for a man to be washed overboard—and

a man can't live five minutes in the antarctic water. On a recent expedition a man came out from dinner one night and decided to take a chance walking the deck that was awash instead of climbing to the upper deck. He was swept overboard and never seen again. On another expedition, three years ago, the helmsman turned the boat too sharply when it was being towed by a whale. The boat capsized and all 16 men on board were drowned.

Summer is a strange word for the weather the whalers encounter when they begin their hunt in January. The sun never sets then in the antarctic. There is only a gloomy dusk for three hours each day when the sun hangs low on the horizon. The men work a 19- to 20-hour day on the catchers, and 12

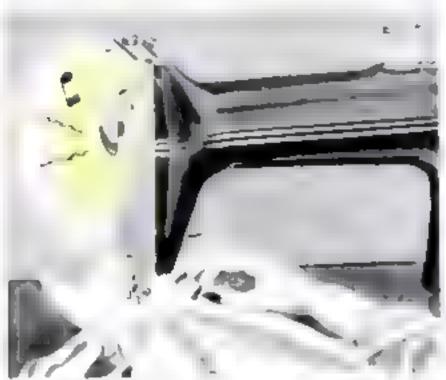

SIR VYVYAN BOARD, chairman of United Whalers, went along as a gunner on an expedition to Antarctica two years ago.

[Continued on page 242]

l'd Like to see them make...

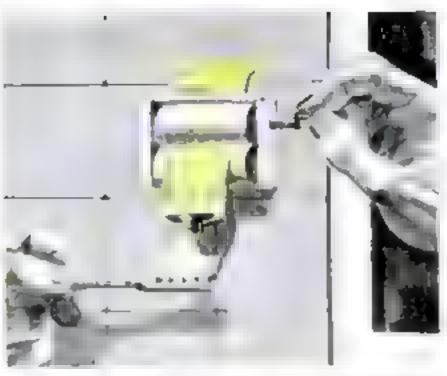

Everyone has his own pet idea of some gadget he would like to see in general use. What is YOURS? Papular Science Monthly will pay \$5.00 for each one published. Use government pestcards only Contributions cannot be acknowledged or returned.

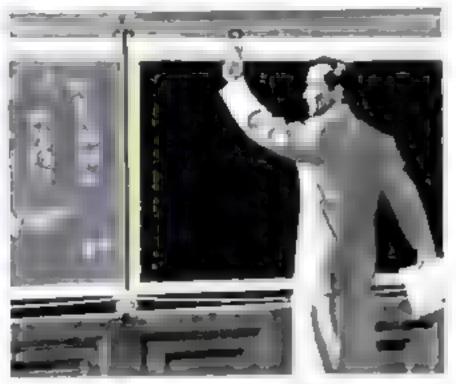

A WARNING BELL on a sewing machine that would ring just before the thread ran out, so you would not find you had been sewing with an empty bobbin.—Brint Philips, Los Angeles.

an automatic flasher built into the rear of a car. It could be turned on at the dash as a warning light when your car stalled on a busy highway at night.—Jack Lloyd, Los Angeles.

A TINY WRINGER to be attached to a bathroom wall for squeezing out the last hit of touth-paste, shaving cream or shampoo from the tube.—M. Clark, New Castle, Pa.

AN ELECTRIC BLACKBOARD ERASER that would move back and forth across the entire hoard, cleaning it in a Jiffy and saving time for teacher and students.—Clark Forg, Fort Wayne, Ind.

SMAIL PLASTIC WINDOWS in the side of children's rubbers and galoshes so that you could insert the child's name for quick identification.—Glenda Denton, Grand Haven, Mich.

This House Goes 50 M.P.H.

It looks like a bungalow, rolls like a car and is self-contained like a cabin cruiser.

AS SOON as the man leaning out the window of the shingled ranch house above gets his gas, he'll be nudging the speed limit down the highway. What's more, while the house is doing 50, Mother can be taking a late snooze in bed, Junior fixing himself a hamburger on the kitchen range, and Sister having a shower.

For this novel house on wheels—called the Vita Home-Cruiser—is not only highly mobile but completely self-contained. With your own water supply, light and heat, you can live in it in a wilderness or a city—and whether in motion or standing still.

The house is mounted on a heavy-duty Ford F5 truck chassis. The six-cylinder engine, in a floor compartment beside the driver, gets 11 to 15 miles to the gallon. Lights are powered by six-volt batteries, kept charged by an hour's idling a day.

The body is built of plywood over two-

by-twos. The shingle siding, designer Lawrence Vita (PSM, Dec. '51, p. 150) points out, not only makes the cruiser more home-like but is a lot easier to repair than metal sheets or wood panels. Actually the cruiser evolved from a little house that Vita built on an old auto chassis as a mobile display of a new type of shingle. When people proved more interested in a house on wheels than in shingles, he designed a 4%-ton commercial model to sleep a family of five.

The Home-Cruiser costs \$7,500, f.o.b. Huntington, N. Y. So far the biggest order has come from a California concern that plans to rent them to vacationers. In the meantime demonstration models get plenty of double takes—people even drive alongside and flag them down to ask questions. Once police came to investigate a Home-Cruiser when neighbors reported that someone had built a house overnight!

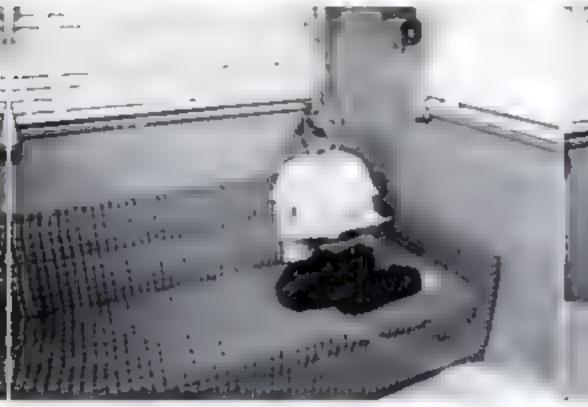

Manhattan's skyline in background, Home-Cruiser owner takes off for country-house and all.

ON THE HIGHWAY, living-room picture window becomes the windshield. Passengers sit

around table that can be combined with the two folding seats to make a double bed.

IN DAYTIME (left above) sofa in rear of Home-Crosser is used for lounging. At night (right above) it's a double bed. Tiny bathroom

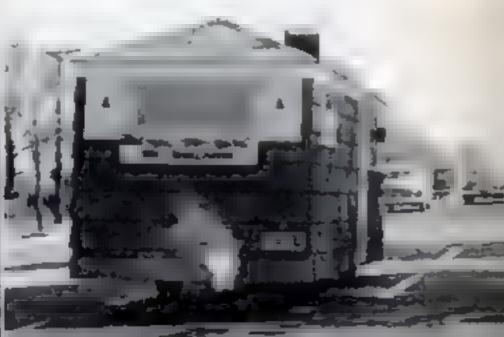

KITCHEN SINK and stove of cruiser are right behind driver. Bottle gas fuels stove, refrigerator, water heater, but later models may be all-electric. Space heater burns oil.

with flush toilet and washbowl is waterproofed, doubles as shower stall. Water tank holds 80 gallons. Waste drains to septic tank.

MOME-CRUISER handles easily in traffic. Later models will have double wheels in rear. Cruiser is 21 feet long, nearly eight feet wide. Overall height as nine feet; coiling, six feet three.

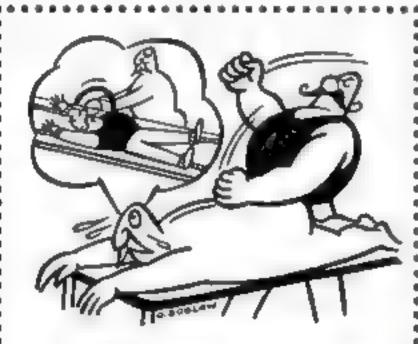

Three-Wheeler Eats Up the Miles on One Gallon of Gas

Turs British three-wheel car is said to cover 60 to 70 miles on a single gallon of gasoline and to attain a top speed of 40 miles an hour. The engine rides between the two wheels at the rear. About 10 feet

long, 4% feet wide and 4% feet high, the car will seat two adults comfortably and provides plenty of room behind them for luggage or the weekly carton of groceries. It is the A. C. Petite, costs \$1,114 in England.

75 years ago this month

Popular Science Monthly reported:

"MR. THOMAS BOND, assistant surgeon to Westminster Hospital, calls Urquhart, who introduced into England the Turkish bath, one of the benefactors of the age. This bath is, he says, stimulating and strengthening—a preventive as well as a curative in disease. Nor is this all: it promotes purity of mind and morals."

Machine Scores Pilots' Landings

TRODI—the touchdown-rate-of-descent indicator—tells jet pilots how fast they hit the deck of a carrier. An incoming plane intercepts light beams from a meter on a pedestal (left, above) and the computer has the answer when the pilot lands so that he can make corrections the next time around. North American Aviation devised the system to check new pilots and experimental planes.

French Jet Gives Cargo Plane Power Boost for Take-Off

Am freighters can carry heavier loads now, thanks to a small jet engine. Hung in a pod under the plane's belly, it is cut in to give a boost at take-off. And if an engine should conk out during flight, the little power package (right) lends a hand again. A French turbojet engine, the Marbore II was developed by the Societe Turbomeca. It is being used by the Flying Tiger Line.

Outrigger Paddles Brake Toboggan, Control Fast Turns

AFTER his family had a crack-up toboggaming, J. E. La Marr of Torrance Calif., devised the brakes shown below. A lever arm on either side of the toboggan pivots the braking fins to the side and downward, digging them into snow to a depth of 10 inches. This double action prevents a jarring stop that would unseat riders. Use of one brake makes steering easier. La Marr is now marketing plans for constructing the brake

Wrestling 41 tons of freight from San Antonio to Sacramento is a breakfast-to-lunch job for the world's largest cargo plane.

By Andrew R. Boone

LET's bitch a ride as I did recently on the world's largest flying freight car: a warehouse on wings which has made more than 200 flights for a total of 1,650 hours, hauled more than 12 million pounds, and shattered a score of international records.

The plane is the Air Force's XC 99,

a truck-horse version of the famous B-36 intercontinental bomber. Right now she's shuttling payloads between Kelly An Force Base. San Antonio, and Sacramento, Calif., on a schedule that calls for two round trips a week

Your first look at the huge plane isn't reassuring. Bathed in the blood red light of a Tevas sunrise, XC-99 is a caricatore of aerodynamic design. Poised on eight

landing wheels straining under 147 tons of plane and cargo weight, her bloated fuselage seems far too large for the slender wing that splits her like a knife blade. The six 19-foot propellers strung along the trailing edge are reduced to the size of pinwheels by a 57-foot-high rudder assembly, and the whole ship looks as nose-heavy as a mallard with a goiter.

Fuselage Is Obstacle Course

You climb a ladder through the lower forward eargo hatch and find yourself on the first of the two huge decks. It is packed with war materiel—stuff that ranges all the way from airplane engines to garbage pails, Overhead are tracks for two of the four self-propelled hoists which are the muscles of XC-99's loading equipment. Each of them can lift and stow 10,000 pounds of freight at a clip.

You've been told that the fuselage volume of the flying freighter is equal to that of three average five-room homes. But home was never cluttered up like this. You edge your way past a part of the 82,146-pound cargo, climb through another hatch, and are in the crew's compartment. You park your helmet and oxygen mask, then open the narrow door that leads to the pilots' cabin.

Capt. James M. Pittard Jr. waves you to the jump seat behind him. It is nearly an hour before take-off time, but the flight crew is busy with countless checks. You want to get in on the act so you pick up your earphones and plug into the

intercom.

Pilot To Copilot

At 5:35 Captain Pittard orders the engines started. One by one, the six big Pratt & Whitneys take hold. Their roar is muffled as the propeller hubs are 85 feet—the length of a railroad coach—behind you.

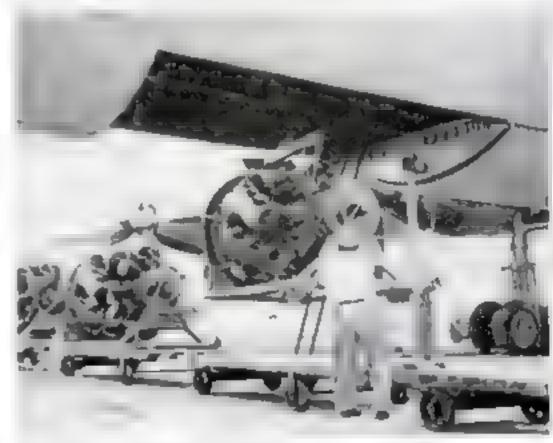

Captain Pittard taps his mike, and through your earphones you hear him talking to his copilot, Capt. Leroy J. Johnson.

"Pick up your wing flaps, please . . .

158 POPULAR SCIENCE

four boxears. About 750 tons can be flown monthly on the San Antonio-Sacramenta runs.

CARGO OF BOMBER ENGINES is no weight-lifting problem. Four special hoists built into the plane can handle 10,000 pounds apiece.

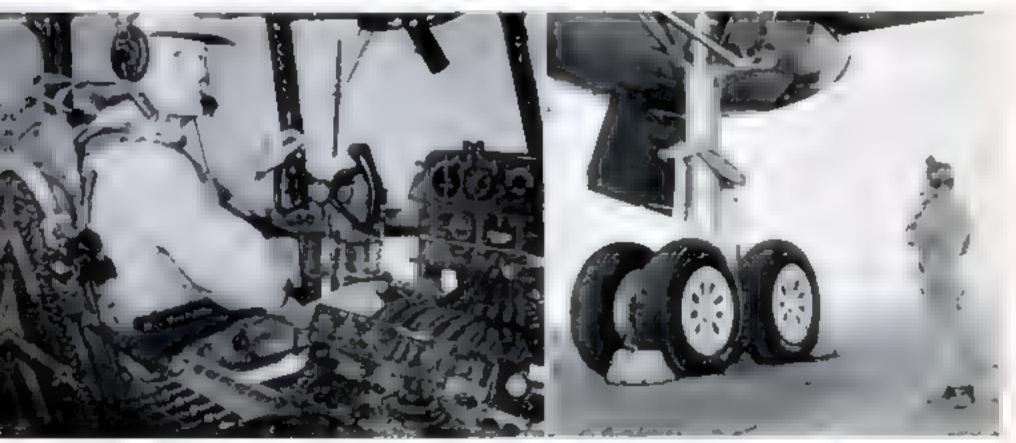

Watch your manifold pressures . . . Keep your hands on the throttles."

Checks continue as the engines warm up. At 6:15 Pittard bends the throttles and you pull slowly away from the ramp

GARBAGE CAN and oxygen masks have nothing in common in the crew compartment. The pail is part of the cargo: masks are regular

high-altitude equipment. Some of the freight handlers find breatlong hard as the big slop outchnibs a sudden desert squall.

ASSIST from the autopilot is welcomed by PSM reporter Andrew Boone, who took over the controls 7,000 feet above New Mexico.

and onto runway 15. There's a 7,300-foot ribbon stretching away to the southwest in front of you, and another 300 feet to the rear. With her payload, XC-99 may need all the runway she can get

TO DISTRIBUTE WEIGHT, Iwin main landing gear have four small wheels each. Original single main wheels broke through some runways.

"We'll take another 20 blocks," Pittard says, "Scanners, count 'em "

From their posts far aft on the lower deck, two sergeants look back through

[Continued on page 280]

Pump Does Human Heart's Work While Doctors Operate on It

A NEW mechanical heart recently took over the job of circulating a patient's blood for 50 minutes while his heart was operated on at Detroit's Harper Hospital (PSM, Dec. '52, p. 153).

The pumping mechanism empties the heart of blood so that a surgeon can see the interior of the heart instead of depending on his sense of touch. Still in the experimental stage, the heart machine was built by a team of medical and engineering researchers from the General Motors Research Laboratories and the Michigan Heart Association.

Briefcase Dictating Machine Is Book Size, Weighs 12 Pounds

This bantam dictating machine, said to be the lightest ever made, weighs only 12 pounds. Slimmed down to less than 2% inches, it can be slipped into a briefcase, and with a converter added, can be set to work in a car or plane. Regulation disks hold 30 minutes of dictation.

The microphone doubles for transcribing and a single knob controls the playback. The new VP Voicewriter is manufactured by Edison of West Orange, N. J.

Offset Sight on Gun Barrel Gives Correct Lead on Moving Target

AIMING a gun with the correct lead should be easier with this sight. It is offset on the barrel so that when the eye frames game in the sight area, the gun points ahead of the target. As long as the target is visible above the sight bar, the angle of lead is said to remain reasonably constant, regardless of the target distance.

Models that clip on rifles and single- or double-barrel shot-guns are available. The Leed Sight Co., Navarre, Minn.,

makes the device.

Spanish Sports Car Hits 170 M.P.H.

This 'Flying Horse' with a choice of engines is reported to be as stable as it is fast.

ONE of the world's fastest sports cars is a newcomer from Spain, the Pegaso 102, named for the legendary flying horse, Pegasus. Its speediest model is credited with a top pace of 170 miles an hour at the same time holding the road "like a train on a track

Harold Radford, a British driver, told me he had guided a Pegaso down a wet, winding highway at 120 miles an hour without skidding, shifting into lower gears when he needed to slow down the car and using his engine for braking.

The Pegaso is powered by a compact

BROAD OF BEAM, Pegaso affords ample back view through one-piece transparcut canopy. Rear end encloses spare tire and 39-gallon fuel tank.

FRONT-HINGED HOOD, in open position, reveals the top of a two-stage supercharger, which

has enabled the 165-hp, engine to push the car up to 160 miles an hour in time truds.

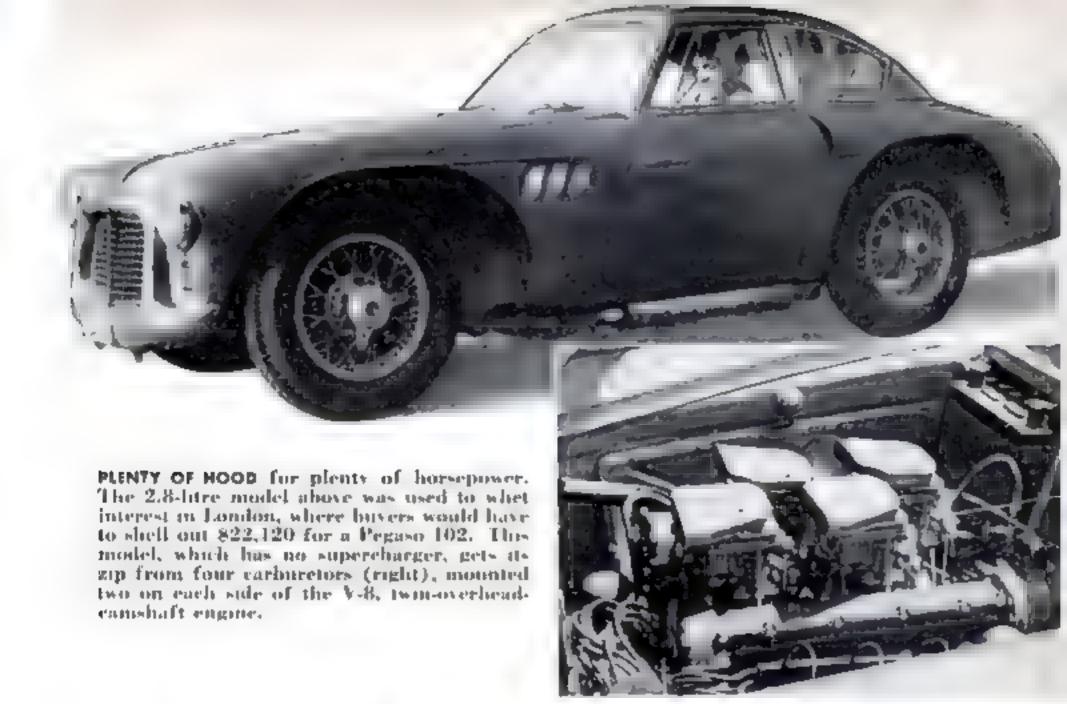

V-8 engine with twin overhead camshafts and very short piston strokes. The engine comes in two sizes—a 152.5-cu.-in, piston displacement for a one-ton car. and a larger 170.8-cu.-in, displacement for a ton-and-a-half model. Both sizes are souped up on demand, but they perform impressively without it. Cars using the smaller engine, without supercharger, have been clocked at 120 miles an hour in tests in Spain.

The Pegaso 102's hard-top two-seater, a cream-colored dazzler with a broad red strip running from its nose straight over the top to the rear end, made a great stir at the 1952 motor shows in London and Paris. At that time there were hardly three dozen Pegasos in the world. They are made in Barcelona by Empresa Nacional de Autocamiones, S.A., a government-subsidized private company.—William McGaffin.

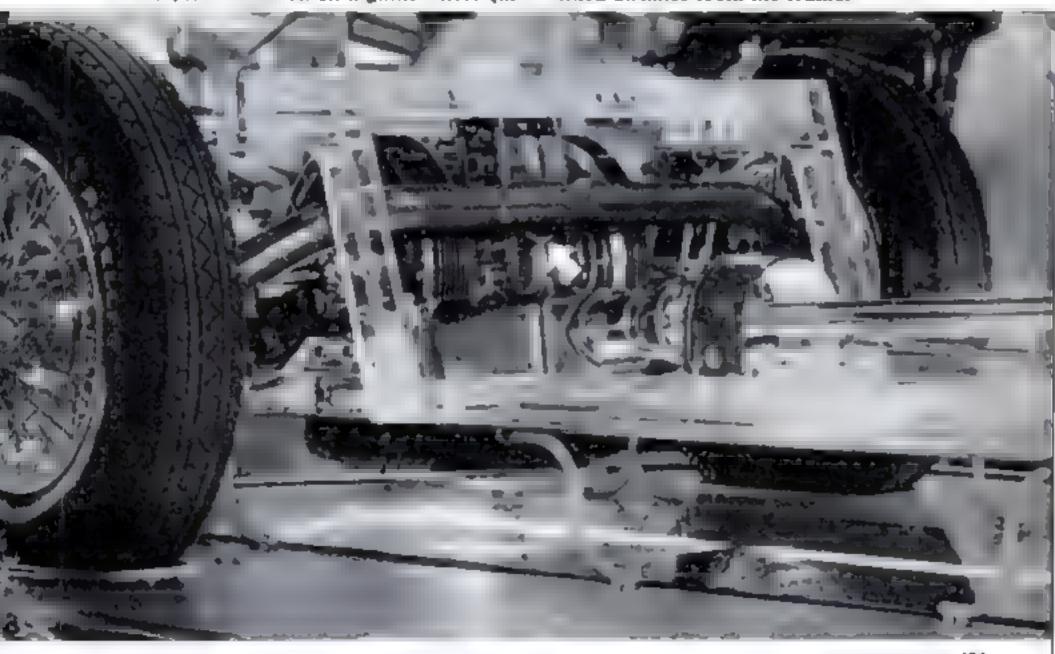

put Yourself in the driver's seal. That will cost you \$8,000, plus ocean freight from Barcelona and U.S. duty. Next problem: Find a highway where you can cruise at 160 m.p.h. Accelerator (not shown) is as large as brake pedal.

162 POPULAR SCIENCE

BECRET of the case with which the car holds the road is the tubular sech seen behind the transparent frame mockup below. Bolted to the axle, it is centered on a guide wheel (arrow) that slides up and down in a vertical channel. This allows spring play but limits sidesway by keeping the wheels always at a fixed distance from the frame.

Vermont Lights Way to Safety

We could save 5,000 lives a year if all U.S. towns had street lamps like this village's.

By Wesley S. Griswold

AFTER dark, people often drive miles to stare at the business section of Lyndonville, Vermont, a little town tucked away in snowy hills 39 miles south of Canada. That's because it has the most advanced kind of street lighting in the country—king-size fluorescent tubes that spread a cool, white, glareless glow so evenly over the thoroughfare and its side-walks that you can easily read by it at any point along the street. The winternight scene on the opposite page is dramatic evidence of this,

If all U. S. towns and cities had street

lights as effective as these, we could prevent 5,000 to 10,000 traffic deaths a year, says Dr. A. F. Dickerson, General Electric's expert on street lighting.

Good street illumination makes a striking difference in accident rates. Kansas City has proved it.

In the average poorly lighted city there are four nighttime accidents for every one in the daytime. In 1945, in Kansas City, the ratio was nine to one. Kansas City then began to modernize its street lighting. By the end of 1951, with no more than three-quarters of the job done, the nighttime accident rate in that city had dropped until it was almost even

THE OLD LIGHTS on Lyndonville's main street were clusters of incandescents on low poles in

midstreet. They provided "glacing globs of light with darkness in between."

THE NEW LIGHTS, installed in August, 1951, illuminate the center of Lyndonville like a

show window and so evenly that there is no noticeable variation in intensity.

with the daytime rate. And after Cleveland had brought its street lighting up to date, its crime rate dropped a whopping 50 percent.

Incandescent lights, Dr. Dickerson says, are fine for residential districts, where less extensive illumination is required. Mercury-vapor lamps are excellent for flooding a relatively small area, such as a busy intersection, with brilliant light. But he would like to see fluorescents used to illuminate all main business streets and urban traffic arteries. Their light is soft, easy on the eyes and covers a large area.

American lighting engineers agree that, for the amount of illumination per watt, fluorescent lights are the most efficient. British experts claim that better illumination is obtained with 240 watts of fluorescent lighting than with 400 watts of mercury-vapor lighting or 750 watts of incandescent light.

An incandescent lamp lights when current passing through its tungsten filament causes the filament to become white-hot. A lot of heat is not converted into light and is wasted.

A mercury-vapor lamp lights when an electric are passes through its high-pressure vapor, which glows as it is excited by the arc's stream of electrons. This produces more illumination per watt than an incandescent light, but a comparatively large amount of energy is wasted in the form of heat.

A fluorescent lamp is a lot like a mercury-vapor lamp, except that the vapor it contains is under low pressure. When an arc's electrons pass through this vapor, the energy given off is largely invisible. That is, it would be invisible if the tube of the lamp were not coated with phosphor. Phosphor makes invisible energy visible.

energy visible.

A fluorescent light is the coolest of the three principal types, converting its energy into illumination with the least waste. Lyndonville's fluorescents provide nearly three times as much light as the incandescents that they replaced—and on

the same amount of current.

Lyndonville was the first community in New England and the second in the U. S. to install fluorescent street lights. Detroit had them in one portion of an outlying business district shortly before Lyndonville was ready. Oakwood, Ohio, a suburb of Dayton, just recently switched on the largest main-street installation of fluorescents in the country.

Bright as a Five-and-Dime

Lyndonville's new lights, which, one long-time resident and storekeeper said, "make Depot Street as bright as the inside of the five-and-ten," are 28 feet above the pavement. They are eight feet long and stretch out at right angles to the street on the arms of 30-foot aluminum poles.

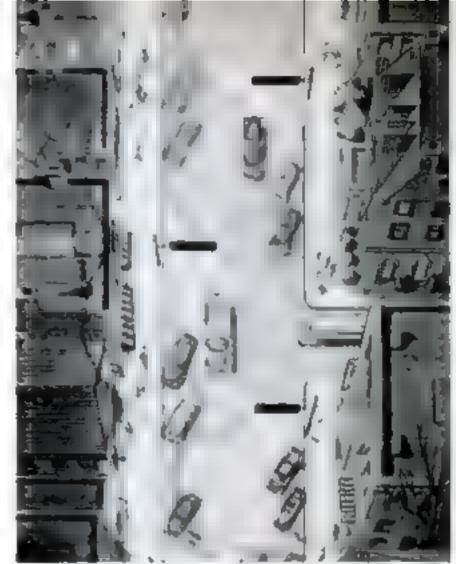

Each fixture contains two pairs of eight-foot bulbs. Behind each pair is a highly polished reflector, and the reflectors are mounted back to back. The lights, which have a life of about two years, shine out through clear-plastic

windows.

No Dark Patches

The great length of these bulbs is one of the chief reasons for their excellence as street lights. The source of light is so wide that the paths of illumination from lamps on opposite sides of the street, even though they are directed up and down the street rather than across it, largely overlap. (The diagram on this page shows how.)

There are no dark patches anywhere on pavement or sidewalk. Pedestrians

SECRET OF SUCCESS in spilling light over Lyndonville's main street her in the way the figure-8 patterns of illumination from the staggered fluorescent fixtures overlap.

and cars are perfectly silhouetted against soft white light that is easy on the eyes of approaching drivers. This is an important safety factor.

Fluorescent fixtures for street lighting cost about twice as much as other types. But their efficiency apparently makes up

for the high initial cost.

"Over a period of 10 years," Lee Gray, manager of Lyndonville's electric-light plant, declared, "I figure our savings in current and bulb replacement will completely offset the higher cost of the light fixtures."

Lyndonville merchants whose stores line Depot Street are unanimous in their praise of the fluorescent street lights. Some claim the lights have increased their business.

The only dissenting voice I heard was that of a tired old carpenter who was leaning against a store window while he waited for a bus to arrive through the

falling snow.

"It's all right to have Depot Street as bright as day," he said without enthusiasm as he glanced up at the fluorescent light above him, "but the trouble is it makes the side streets we live on seem as dark as back alleys."

He Tames Avalanches

A veteran snow ranger's ideas are used to save lives by U.S. slide-forecasting station.

By James Nevin Miller

BY HURLING 75-mm, shells at snowpiled slopes in the Wasatch National Forest, gunners start man-made avalanches so that skiers will not be trapped and buried by unexpected shdes later.

Army-style strings of demolition charges and individual blocks of high explosives are other novel items of equipment in use at America's first avalanche forecasting station, recently set up on an 8.300-foot mountain peak at Alta, Utah.

To safeguard visitors to this skier's paradise, a corps of "avalanche busters" has been trained since early 1951, under the direction of six-foot Monty Atwater—veteran snow ranger, Army ski-troop of-ficer in World War II, and now safety director of winter sports at Alta.

Gauges Record Snowfall

As a snow ranger, Monty developed a method for predicting snowslides, and his ideas have been embodied in the forecasting station he helped to plan. Much of its pioneer equipment he designed himself.

Its recording devices operate 24 hours a day without need of attention. Three of them perch on a spindly tower. A device resembling a phonograph on a barrel measures rate of snowfall. When an inch of fresh snow covers its slowly revolving

Avalanche station's tower has rate-of-snowfall meter (foreground) and precipitation gauges.

turntable, an electric eye flashes an impulse to an automatic recorder in the heated ranger station 150 yards away, and a brush sweeps the turntable clear for another measurement. Two precipitation gauges, one direct-indicating and the other wired to the indoor recorder, melt the fallen snow and show its moisture content.

A new "hazard chart," a revolutionary development in avalanche forecasting, takes into account these instruments' readings and other data—wind speed and direction, temperature fluctuations, previous snow depth. "When the hazard scale gives us a score of what we call 'plus three," we know the avalanche situation is dangerous," Monty says, "so we shut down ski trails in the danger zone."

Shooting Down Snowslides

To get potential slides out of the way, the rangers have successfully tried high explosives. When hand-placed charges

can be used, they employ tetrytol—a military demolition agent more powerful than TNT—in half-pound blocks or chains of sticks. At snowcaps beyond reach, their artillery fires 75-mm. high-explosive shells.

Rangers at Alta recognize several types of avalanches. Those of dry snow are fast-moving, quick-spreading, dangerous if large—but usually start before much snow builds up. Moist slides, slower and heavier, give an alert person time to get away. Their chief threat is to buildings.

Most dangerous are "slab" avalanches. An unstable slab of snow, typically dull and chalky in appearance, may remain poised almost indefinitely—then suddenly give way. Movies of a slab avalanche

"SLIDE AREA" SIGNS, set up by rangers whenever field tests and forecasting instruments show an avalanche threatens, save lives by warning skiers away from danger zone.

WEAPONS in avalanche fighters' arsenal include strings of high-explosive demolition charges and 75-mm, shells (above) to give potential snowshdes a deliberate start and get them out of the way. Demolition charges are laid atop snow, set off electrically (left).

show practically a whole slope in motion at once. Caught in one, a skier has virtually no chance to escape

While slide victims have survived 72 hours' burial in the snow, usually anyone not killed outright soon perishes from suffocation, shock or exposure. Hence, the need of quick and expert rescue work, for which Alta's training is considered tops.

Alta Pays Off in Lives

Once Alta was notorious as a graveyard for avalanche victims. Since the Forest Service set out to tame the slides, only two skiers who defied warning signs have met with an accident. One was killed, the other rescued.

So well is Alta's slide-forecasting station paying off that it has set the style for other skiing centers and two stations like it have been set up since, one at Stevens Pass, Wash., the other at Bethoud Pass, Colo.

RESCUE TEAMS practice probing with poles for dummy, hidden beneath anow, and digging it out. Quick work saves buried slide victims from death by suffocation, shock or exposure.

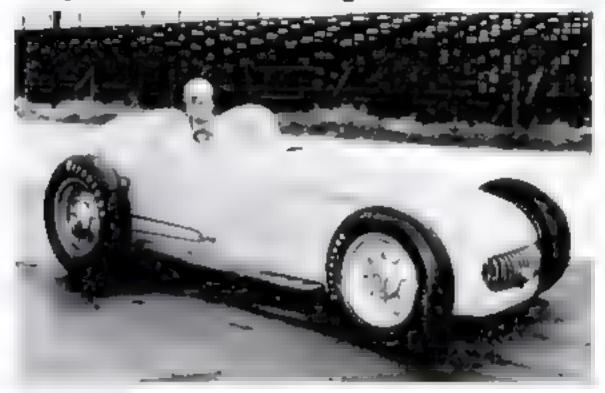

Biggest 'Copter Heads Upstairs

HERE's the largest helicopter ever built in this country—the XH-17. Looking like some weird insect with its four dangling legs, it is shown shaking the dust from its wheels for its first extended test flight.

Two GE turbojets spin the blades which measure over 125 feet from tip to tip. Height of the Hughes craft is more than 30 feet. The Air Force expects to use big 'copters to lift and deliver heavy artillery, bridge sections and trucks.

Chrysler-Powered Racing Car Does 135 M.P.H. for 140 Miles

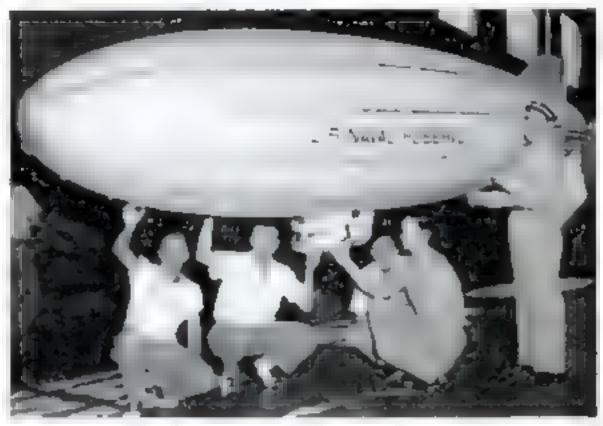

This racing car whizzed over Indianapolis Speedway straightaways doing 170 m.p.h. in test runs and logged an average of more than 135 m.p.h. for 140 miles. The official Speedway record for 100 miles, held by Bill Vukovich, is 133.008 m.p.h.

A Chrysler V-8 engine, producing more than 400 hp, without supercharging, gives the car its zing. R. G. Wolcott is the owner and Joe lames the driver.

Model Blimp Flies to Help Recruit Navy Air Cadets

A BARY blimp has taken on a full load of helium for a take-off to help recruit Naval Aviation Cadets. A mimature ZP2K airship (right), it is powered by two modelplane engines in outrigger nacelles.

The cabin houses a radiocontrol receiver and mechanisms for moving elevators and rudder. Lt. John Kane of the Naval Air Station, Lakehurst, N. J., fabricated the gas bag. Ray Benton, a professional model maker, built the cabin and tail.

WINNER COPS THE FLAG at Juarez, northern terminus of Mexican Road Race, after cover-

ing treacherous 1,934-mile course in elapsed time of 18 hours 51 minutes 19 seconds.

Mercedes Shatters Road-Race Record

AVERACING 102 miles an hour for almost 2,000 miles, a light Mercedes sports car blew the previous 88-m.p.h. record to bits in the 1952 running of the world's toughest speed test—the Mexican Road Race. Karl Kling of Stuttgart, Germany, piloting a Mercedes 300 SL, raked in the winner's chips—\$17,442. Another Mercedes was second.

Stock-car honors went to America's most powerful production automobile, the 1953 Lincoln (see p. 110), which took the first

four places, Chuck Stevenson, AAA champ from Fresno, Calif., was first, averaging 90.

Of the 27 sports cars and 55 stock models that roared out of Tuxtla Gutiérrez, near Mexico's southern frontier, on Nov. 19, 43 never reached the finish at Juarez, across the line from El Paso, Tex. One driver was killed, 14 cars wrecked, the others forced out by mechanical failure. Mercedes, which also won the big Le Mans race in France last summer, appeared to be making good its boast of supremacy in road racing.

BARS FOR THE BIRDS. Karl Kling, the winner and new champion, looks out through bars installed on his Mercedes to protect him from buzzards flying into the windshield.

CLOSE-UP OF 173-HP. ENGINE that powered German racer. Bosch spark plugs lined up on air cleaner were removed for prerace tune up. Car has three Weber carbs.

LIVESTOCK WOULDN'T STAY ALIVE LONG-and neither would the rarers-if sheep and cattle were not shoped off road. Race route was

guarded by 50,000 Vexican soldiers. Open Mercedes above was disqualified when driver returned to starting line for adjustments.

WITH TYPICAL GERMAN THOROUGHNESS, the Mercedes team brought along several hundred carburetor jets, to permit every possible adjustment for different altitudes.

ZIGGED WHEN HE SHOULD HAVE ZAGGED. Felice Bonetto tells how be went off road, wrecked car. He wasn't only one who can into bad luck —only 39 of 82 finished race.

Army Amphibian Has One Motor per Wheel

Bic enough to deliver the latest medium tank from ship to shore, this new 60-ton amphibious cargo carrier for the Army dwarfs the World War II Duck. Over-all length is 61 feet. Afloat (right), twin screws propel it; on land (below), an individual 165-horsepower Diesel engine turns each of the monster's 95-foot wheels. It's called the Bare (Barge Amphibious Resupply Cargo.)

It's Low, Wide and Gold

Lowest and widest sports car ever built—that's what Johnny Campbell and Elbert Dooley call their gold-painted Cado chelow). The two Cleveland mechanics built the chassis and six-foot-wide steel body round a 160-horsepower Olds engine. The Cado is so low—clearance one inches height, 36°, inches—that the driver can step over the side when the top is down. The car is valued at \$4,500.

Plastic Streamlines Rocket Pod

The plastic cover below being slipped over the nose of a wing pod on the Lock-beed Starfire, disintegrates a split second be fore the rockets fly. Gas pressure of the burning propellant blows it apart. The wing pod, which packs a dozen 2.75 inch rockets is one of a pair being added to the jets armament. These "side arms" double the plane's frepower—it carries two dozen rock ets in its nose

Cops Get Pocket Radio

SMALLER than a cigarette carton, the outfit below is a self-contained radio transmitting station for policemen, firemen and railroaders. A loop antenna doubles as a carrying handle for a case holding microphone, dry cells and eight tubes with a printed circuit. Weighing less than two pounds, the Motorola-made set operates on a frequency range of 152 to 174 megacycles and has a range of five miles.

They Say Now.....

"The eradication of tuberculosis is not inconceivable."—Dr. E. H. Robitzek, anti-TB-drug pioneer.

"There is a possibility of a quite appreciable change in the world's climate [to dryer and warmer] in 25 to 50 years."—Dr. C. E. P. Brooks, British Meteorologist.

"More trained workers are needed to investigate the still unsolved problems of public health."—Brig. Gen. James Stevens Simmons, Dean, Harvard University School of Public Health.

"It is now possible to have a complete 'family' of atomic weapons, for use not only by strategic bombers, but also by ground-support aircraft, armies and navies."

—GOBDON DEAN, CHAIRMAN, U.S. ATOMIC ENERGY COMMISSION.

P.S.

Last minute news & notes...

ATOMIC POWER on a commercial scale will come sooner in England than here, predicts the "Wall Street Journal, " New York business newspaper. It's not that U.S. research lags behind Britain's -- the reason is aconomic. With conventional power more expensive there than in this country. A-power doesn't face as stiff competition. Construction is expected to begin within a year of a British atomic-power plant with a capacity of 150,000 to 200,-000 kilowatts, enough to supply a good-sized city or to propel the liner Queen Mary.

HEARTS THAT HAVE STOPPED BEATING have been started again by a "thyratron stimulator," a newly perfected medical aid that prods the muscles to action with timed electric impulses. In one life-saving case reported, it kept a patient's heart pumping for five days before normal heartbeat resumed.

ENTIRELY NEW DEVELOPMENTS since World War II make up 60 percent of all ordnance items the Navy is now buying.

WILL TAPE RECORDINGS, some day, supplant disk phonograph records? What might be a pioneer step in that direction is appearance on the market of sound-tape records—"Magnecordings by Yox"—of major orchestras with noted conductors and soloists. They're made at standard 7%—inch-per-second speed, and priced according to length (a full hour's program costs \$9.95) by MaYoTape, Inc., 225 W. Ohio St., Chicago.

A GAS-TURBINE POWER PLANT ON RAILS will be built for the Army Corps of Engineers by Westinghouse. First of its kind, the 5,000-kilowatt mobils generating station will travel on two railway cars.

SKYWRITING IN COLORS recently made its debut over New York with an advertising message in yellow smoke. It's done by flushing oil and a dye into the plane's exhaust.

DID AN H-BOMB GO OFF at Eniwetok Atoll last November? Unofficial consensus, based largely on eyewitness accounts, was that one did. The AEC wasn't saying. Only official statement, more guarded than some of the headlines it inspired, was that the tests included "experiments contributing to thermonuclear weapons research." Actually those were exactly the same words that the AEC had used after its "Greenhouse" tests a year earlier, PSM files revealed.

WASHING CLOTHES IN COLD WATER will be possible with detergents of the future, predicts a leading scap maker's chief chemist, N. W. Ziels of Lever Brothers Co. Then washing machines won't tax the limited capacity of some home water heaters.

DO LIE DETECTORS tell the truth? Experts are almost evenly divided as to whether polygraphs are reliable enough for courtroom use, according to a survey by two University of Tennessee professors. But use on criminal suspects before trial and on key business and governmental personnel won four-to-one approval from 700-odd psychologists, criminologists and personnel officials.

BOTH HEAT AND COOLING are offered by a new window-type air conditioner for year-'round use. Its heating element warms the air and takes the chill out of a room on cool spring and fall days, when central heating is not in use, and in winter before the heat comes up. Maker is the Mitchell Mfg. Co., Chicago.

A TRIP TO THE MOON with Long Beach, Calif., as its point of departure is proposed by members of the Pacific Rocket Society. To build the rocket, they suggest that the city provide a modest \$1,000,000, from its oil-royalty fund of \$130,000,-000. The moon journey, they argue, would be "a dramatic gesture to replace the present annual 'Miss Universe' beauty carnival."

The Editors

Like homeowner John Kirby, you can install a sheet of conductive rubber that will supply radiant heat for that extra bit of warmth.

Electric Ceiling Heats His Bathroom

I F YOUR bathroom needs supplementary heat to drive away goose pimples, you can supply it by hiding an electric heater in the ceiling.

The flip of a switch then will let you

bathe and bask in the warmth of radiant heat. The heater itself is a most unlikely looking object—a rubber panel, no thicker than heavy cardboard, with an electrical junction box jutting from the corner of one

MERC'S THE HEATER—a 36" by 48" Uskon panel. The 115-volt type can be connected to the conventional 20-amp, house circuit. Note junction box at upper left corner.

surface. Carbon black makes the rubber electrically conductive.

The U.S. Rubber Co. introduced these Uskon panels five years ago (PSM, April '48, p. 122). Since then, the rubber ceiling panels have been installed as the only heating system in many homes located in areas with low electrical rates and mild winters. Where rates are high, operating costs make other home-heating systems more economical.

That extra bit of heat. Wherever you live, a single Uskon panel adds up to a lot of sense dollar-wise if all you need is supplementary heat. John Kirby, who installed a panel in his bathroom ceiling by the techniques shown in the accompanying photos, wound up the job for about \$35. Used only when needed, the heater does not add ap-

2 PAINTING IS EASIER if done before panel in installed, so John Kirby put on a prime cost as first step in installing a panel in the bathroom of his home in Mount Vernon, N. Y.

3 PANELS WERE HUNG by drilling and countersinking holes for No. 8 flathead screws at 8" intervals. Holes were sligned ½" from edge. Space 1½" from edge is nonconductive.

A AFTER CUTTING ceiling hole, Kirby nailed up 34" plywood and hardboard shims to bring thin Uskon down to level of ceiling material. Hole was cut in one piece for junction box.

5 PANEL WAS SUPPORTED with a T formed from scraps of lumber while 1 1/4" screws were driven. Screws are countersunk to allow use of molding to cover the joint.

6 WIRING WAS DONE FROM ABOVE, although connection might have been made from below before panel was raised. The entire area was insulated with mineral wool 4" thick,

preciably to the electric bill for his home.

Standard Uskon panels draw 22 watts to the square foot. They come in 115 volts for supplementary heating (these can be wired to ordinary 20-amp, household circuits) and 230 volts for heating large rooms or whole houses. Thus, the 115-volt, 36" by 48" panel that Kirby used draws 264 watts-little more than a refrigerator, which runs far more frequently than you normally would use the heater.

Installing a panel as Kirby did is little more difficult than putting up a piece of wallboard. You must cut a hole in the ceiling—or wall if you want the heater there—to suit the size of the panel, usually 36" square or 36" by 48". The panels cannot be cut.

Insulation is a must. A unit without insulation behind the panel is wasteful of heat. Most paints, including water-based ones, will cover Uskon, but with oil paint it is best to prime first with shellac or aluminum paint. Wiring consists only of running a cable from the house circuit through a wall switch or thermostat to the two binding posts in the junction box on the panel.

A new thin type of Uskon that U. S. Rubber recently announced (see next page) is also comparatively easy for the homeowner to install. This is simply cemented in place. You could install it over plasterboard or other rigid material or over an existing plaster ceiling if it is fairly smooth.

Thin panels cost less. With 4' square panels of the original type costing \$30 each plus freight from Passaic, N. J., installed costs have been high. The usual figures per square foot of house area have been \$1 to \$1.25 in the South and California, around \$1.50 to \$2 in such areas as Chicago and the East Coast.

7 A FINAL COAT OF PAINT and you would never know the heater was there. Uskon panels should be spaced 1/16" from each other or rest of ceiling to allow for expansion.

How to Estimate the Cost of Electric Heat

ELECTRIC heat is clean, pleasant, safe, easily controlled and takes up little space. In one or another of its forms it can be installed at costs not out of line with other heating.

But big power bills can take the joy out of it. And make no mistake: unless your electric rate is fairly low and your house is thoroughly just lated its open trog cost on be fix logher than other systems.

of a following featurely will give you may storage of the armed cost of the arms your look with electricity.

I Find the cubic footage to be heated. length times width times height of the space in your home

2. Ask the weather how or rightly company for the average no ther of degree days in your locality. A degree day as standard of measurement for heat requirements.

3. Multiply the degree days by the cubic tootage, multiply this product by three, and divide the total by 10,000

4. Multiply this figure by your kdowatt-hour rate and the result will be an estimate of how much it would cost to heat your home per year.

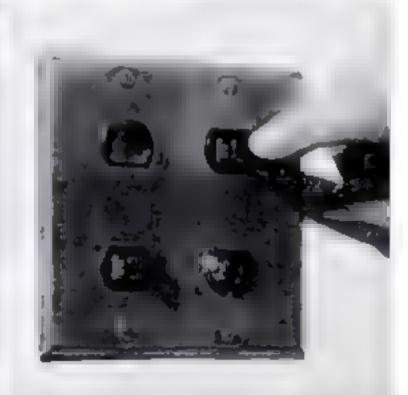

In contrast, a 4' by 8' panel of the new type (including the raceway) sells for \$34.50 plus delivery. With this type, contract figures are expected to run 30 to 40 percent below former costs.

Both types of Uskon will remain on the market. The original, which has a " backing sheet of asbestos cement, will be used primarily in special installations where rigidity is required, for instance in some factories or office buildings.

Please turn the page for more on ceiling heat.

O switch and Pilot-light Unit was installed in wall to control heater for short-period use. For steady heat, a thermostat could be substituted for wall switch.

New Kind of Rubber Heat Panel Is Lighter and Costs Less

NEW USKON PANEL just introduced by 1. S. Rubber Co. looks like this when it comes from factory (alled Type I (for thin), these panels are lighter and less expensive than rigid ones in use in recent years.

ADMESIVE IS USED to install thin heat panel over any amouth, rigid surface. Liquid adhesive is applied in strips to correspond to strips on panel. Panel is then pressed into place and a roller used to make it tight.

PAINT IS APPLIED with a roller or brush. New type of Uskon is so that that a supplementary heating panel like this one becomes inconspictious when painted to match ceiling. No molding is needed as for older type.

WIRES GO INTO NARROW RACEWAY where ridge of panel meets wall. A cover is then snapped on to conceal the wires. A raceway is included with each Uskon panel. Wiring supplies are standard and may be obtained anywhere.

Types of Electric Heat and Characteristics of Each

Space heaters. The cheapest to box, these work well in mild elimates. Convection types may not distribute heat eventy chough in cold weather. Those with fans make some DANISC

Radiant plass panels. Although taking up cors detable wall space, these produce radiant beat that is cle in and comfortable. They usually respond quickly to changes in outdoor temperature. New narrow baseboard types fit into many rooms where the ordinary wider types are not feasible.

Resistance wire or cable. Buried in plaster. ceilings, walls or concrete floor slabs, these are invisible and take up no house space. The installation cost is comparable to that of good warm-air systems. This type of heat, particularly if used in a slab, may be slow in respond-

ing to rap d temperature charges

Rubber panels. These and other prefabricated puncls for ceiling use have generally been the most expensive to buy, although lower costs promised for the new Uskon may level this out. The panels are so thin that they heat up in a matter of m notes and cool off just as fast, avoiding the lag that is a disadvantage of some other radiant heating 5) stems

Baseboard convectors. These are a comparatively new development. A baseboard around the room contains resistance wires that heat air as it passes through. Some types use hits or coils to expose a greater heating

surface to the air.

67 Lb. Give 20 Hp.

MECHANICALLY controlled intake poppet valves and an automotive type fuel pump are incorporated in a twin-cylinder, 20-hp. motor weighing 67 lb. that was introduced at the New York boat show

A control knob on the instrument panel permits the operator to switch the fuel supply from the motor's five-quart tank to a sixgallon auxiliary tank. The diaphragm pump—operated by exhaust pressure—in the power head moves fuel from the auxiliary tank eliminating the need of air pressure in the tank.

Throttle control as well as the gearshift for forward, neutral or reverse are built into the steering handle. For remote control, the

steering handle is removed and a plug-in attachment substituted. The motor also has a vertical stern adjustment that permits trimming from within the boat while it is

slowly under way. Specifications include: bore, 28"; stroke, 21/32"; piston displacement, 19.94 cu. in.; stern height, 15". Martin Motors, Eau Claire, Wis.

Motor Has Auto-Type Hood

An acoustically tuned carburetor silener and a water-sealed exhaust reduce the noise of this two-cylinder, 15-hp, motor by 20 percent, muting most high-frequency noise, according to the manufacturer.

For routine motor inspections and servicing, the port side of the hood can be raised (above) to a vertical position. The complete cover assembly can be lifted off after two screws on the starboard side are removed. Ignition and carburetion are synchronized in the steering-handle grip. A gearshift permits the motor to be started in neutral and then put into forward or reverse. Evinrude Motors, Milwaukee

Foot Controls Trolling Motor

SLIGHT movements of one foot control this electric fishing motor. To steer it you push the pedal down or let it up; to change speed you tilt the pedal left or right. An auto battery powers the two-speed, 3-hp, motor, driving it for about 1% days' fishing on one charge.

The motor can be clamped either on the transom or the side of a boat (above), where it will move the boat forward, backward or to either side. The electric unit can be folded up into the boat while an outboard takes you to your fishing grounds, then lowered to move you from spot to spot. Silver Creek Precision Corp., Silver Creek, N.Y.

F Your Oil Burner Stops...

Try the lights to see if the house correct is on. Servicemen will tell you that they always get calls when the power fails.

Make aure room thermostat is set at least 3° above room temperature. A burner may not operate otherwise. If you suspect the thermostat itsed, remove cover and blow out any dust. If points are duty, clean them gently by drawing plain paper between them.

Be sure you have oil. If not, remember you may have to prime the pump after oil is obtained. The delivery man usually will do this. Also check the oil valve at the tank and the one at burner if there is one. Both must be on.

If it's a steam system, the low-water cutoff may have stopped the burner. Water in the gauge should be about halfway up at all times. The burner should start automatically when the correct water level is restored.

Baler Bundles Old Newspapers into Neat Package for Junkman

BEFORE I made this baler the storage of old newspapers between pickups by the junkman was always a problem. The front and both ends of the box are hinged to the base, and screen-door books hold the ends to the front and back.

Four blocks nailed to the bottom of the

baler provide space through which a cord for tying the papers can be drawn with a wire hook. After the box is filled, string is pulled through slots in the box panels and tied. Then sides and front are let down and the bale of papers removed for pickup. —T. L. Stalker, Flint, Mich.

182 POPULAR SCIENCE

Make these eight checks before you call in the repairman. If the trouble is minor, you'll save by finding and fixing it yourself.

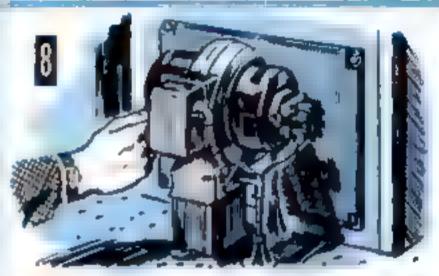

See that master switch controlling the burnor is on. A member of the family, perhaps a youngster, may have turned it off.

Check the fuses in the house fuse box and in the burner switch box. If a fuse is blown, replace it with one of equal amperage,

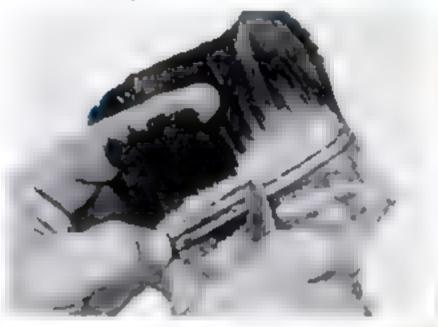

Press safety recycling button on the stack relay attached to the smoke pipe after making previous checks. (Open furnace door to relieve possible pressure build-up from oil fomes and stand away from door as you press the button.) If a normal flame appears but burns only a few minutes, remove the stack-temperature unit and gently clean soot off the ond inserted in the pipe. Replace and press button again. If flame doesn't continue, call a repairman

If no flame occurs when you press recycling button, press overload cut-out button (usually red) on motor—if there is one. If you still get no flame, call serviceman.

Trimming Renews Old Brushes

An OLD paintbrush can be given new life by trimming away the worn outer rows of bristles. When these bristles are worn short, they destroy the original flexibility and spreading power of the brush. Use a sharp knife or razor blade.—Clinton R. Hull, Costa Mesa, Calif.

Kit Contains 48 Magnets

Designed for shop or experimental use, the 48 permanent magnets in eight styles in this kit have a pull of up to two pounds each. Another kit is made up of 18 larger magnets with pulls of from three to 12 pounds. The kits are available from Carboloy, General Electric Co., Detroit.

1. Slotted Workbench. Simple hold-downs secure work to this new bench for sawing, planing, sanding or routing.

Although the bench can be covered by a removable top held by locating blocks, the slots between the two-by-fours have many uses. Ripping with either a portable power saw or a bandsaw (right above) is easy. The slots are handy, too, for through nailing or drilling, Also, wide pieces of work can be wedged in the slots for edge planing.

Other features of the beuch include the removable plyword top (left above) to give

a flat working surface. Wedged vertically in a slot, the top acts as a fence.

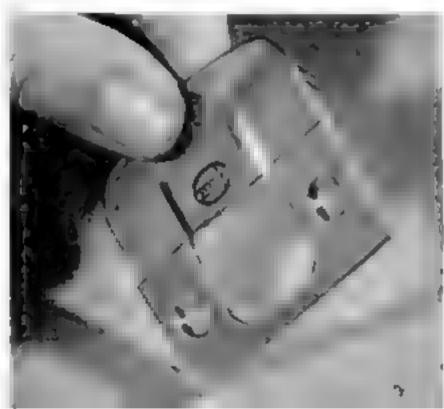

Power tools can be quickly attached or removed. The tools first are bolted to a wooden base. Two-by-fours spaced to match the slots are bolted to the base. Hold-downs then lock the base to the bench.

The bench, 24" wide, 28" high and 60" long is assembled with bolts. Included are the removable top, two bench-top clamps, four hold-downs, wood-working vise, junction box for power tools and four wedges. It retails for about \$60.

- 2. Setscrew Connects Wires. Two or more wires can be quickly joined with this connector (left). After the stripped wires are inserted in the brass sleeve, the setscrew is tightened, joining the wires. Then a Bakelite shell is threaded over the brass sleeve. The connector can be removed and used again to make a new connection. A screw-driver is the only tool needed.
- 3. Folding Table Legs. Strong enough to support more than 1,000 lb., these tubular steel legs convert a plywood panel into a general-purpose table. A flush door could be used to make a more elegant model. The screw-attached legs make a surface about 30" high when extended, but quickly fold back to permit compact storage.
- 4. Door Strike Plate Adjusts. With the two screws slightly loosened, this strike plate can be moved to compensate for warping, settling, added paint layers or other causes of faulty alignment between door latch and strike plate. Serrations on facing parts hold the setting when the screws are tightened. Maximum adjustment is %".

5. Box Finds Metal.

Pipes, heat ducts or plastered-over electrical outlets can be located beneath plaster or wood with the Plaster-Eye. The instrument operates on self-contained dry cells, works by measuring the effect of eddy currents, and gives

readings through metallic lath. When the instrument is passed over a hidden pipe, for example, the needle swings over sharply.

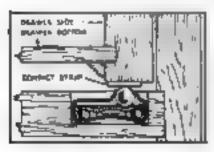

6. Rim Pours Paint.
With this attachment (right) in place, paint won't slop over the

rim when you mix or stir it, and the spout also makes it easy to pour paint. The plastic

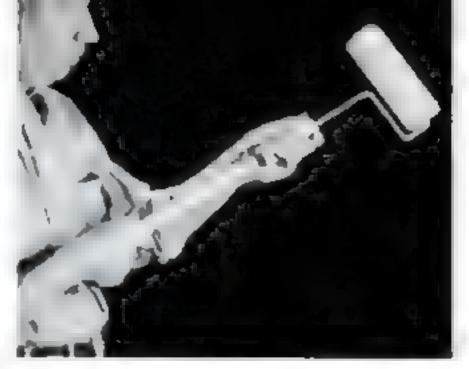

can enlarger—called Pormix—is attached by snapping it into a gallon can, keeping the can's sealing groove free of paint.

7. Ball-Bearing Glides. Drawers and sliding doors roll freely on these British-designed glides. A metal contact strip serves as a track for several circular units (above) mounted in the other member. Each circular unit has an off-center contact ball that

bears on a circular plate inside. This, in turn rides on a thrust race. The glides are available with or without flanges.

8. Extension Fits Paint Roller. With a mop or carpet-sweeper handle threaded into the handle of this paint roller, you don't need a ladder or scaffold to reach ceilings and upper walls. Without the extension, the roller can be used in the ordinary manner. The roller is 7" long.

9. Five Ladders in One. Because of notches and metal fittings, this ladder can quickly be adjusted to a number of positions. It can be used as an extension ladder, a stepladder, a stairway ladder (above) or as two straight ladders. It comes in two models—a heavy-duty job for painters and a house-hold model. Both are available in lengths of 5' to 8' that extend from 8' to 14'. The household model has flat steps on one section, making it easier for women to use as a stepladder.

Further information can be obtained from: 1. Martin Baumann Co., 370 Lexington Ave., NTC; 2. Holub Industries, Inc., Sycamore, Ill.; 2. Institutional Sales Co., 4932 Portico St., Philodelphia 44; 4. Karikiet Sales and Service Co., Anaheim, Culif.; 5. Plaster-Eye Co., 2560 Noblestown Rd., Pittsburgh S; 6. The Pormix Corp., Glenville, Conn.; 7. Alpha Tool & Supply Co., Westwood, N. J; 2. The American Products Co., 3311 Edwar Ave., NTC; 9. Speicher Bras. Ladder Co., Indianola, Iawa.

How an Expert Aligns an Auto's Front End

It takes delicate instruments and a lot of know-how to keep the wheels of modern high-speed cars rolling true and safe.

By Howard G. McEntee

WHEN old Dobbin was a colt, buggies and wagons rolled around corners with ease. But in this motorized age, you have to go to specialists like Arnold Nadworny to keep your car taking the turns properly.

Nadworny is a wheel-alignment specialist. Every working day he deals with the intricacies of easter, camber, toe-in and kingpin inclination—all part of that mathematical jungle, front-end geometry, that confuses so many apprentice mechanics.

Knowing how to make adjustments, Nadworny is convinced, is just the beginning of what a good front-end man should know. He should also know why. Nadworny has a success story to tell about that—his own.

Some years ago he was a traveling trouble shooter for a mamifacturer of the type of equipment he now uses. Hit by a yen to settle down, he looked around for a likely place to establish his own shop.

The community he picked already had several alignment shops, all reasonably successful. But Nadworny knew that they had a failing in common. They could do a frontend job, but the operators had never bothered to find out the reasons for what the books told them to do. Some even used their equipment incorrectly.

It Takes More Than Fancy Gauges

Nadworny's confidence that he could get a slice of the business by doing a better job has paid off. His shop is now a leader in the community.

One thing strikes you when you take a car to Nadworny's shop—the amount of work he does, the checks he makes, before taking even one reading from those fancy gauges you associate directly with front-end

alignment. But without this preliminary work, he explains, you never could know whether the readings you get are correct.

The first rule for aligning a front end is that the car must rest on a level surface. And the car won't rest level if tire pressure

isn't equal all around.

So Nadworny, like all thorough front-end men, makes sure that incorrect tire pressure, spring sag, spring shackles, shock absorbers and bent or eccentric wheels are not causing the car to tip one way or the other. This check includes the whole car, not just the front end

Each Maker Has Own Specifications

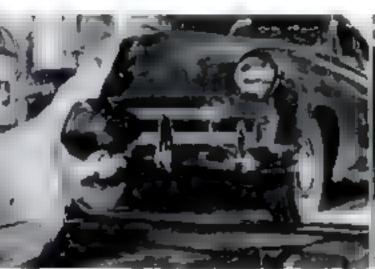

At the front end, checks and any necessary adjustments are made of the spindle bolts and bushings, the wheel bearings, tiered ends, the upper and lower support-arm pins and bushings, the lower control arms and bushings, steering arm, spindle, axle, torque and radius arms and wishbones.

Then, finally, comes the abgnment itself. Camber, easter, toe-in, kingpin inclination and toe-out on turns all are brought to specifications furnished by the car manufacturer. (To understand these confusing terms, see experiments that follow this article.)

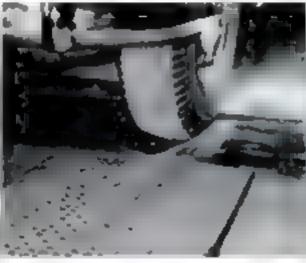

Specifications vary considerably from car to car and year to year. Surprisingly enough, some manufacturers specify no camber and toe-in as the ideal. That has been the case with all Chrysler-made cars since around 1940, and the corporation has sought to impress on its mechanics that "front wheels straight ahead and straight up and down" is the goal to shoot at. Lately, Plymouth has also listed zero caster as the ideal specification.

In the old days, mechanics could do a pretty good job of hitting alignment angles by eye. But knee-action front ends brought complications. Today it takes specialists like Arnold Nadworny, using specialized equip-

ment, to do the job right.

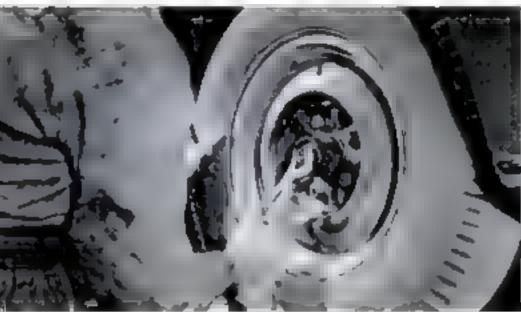

1 Beginning a job, Arnold Nadworny guides car up ramp of alignment tester. As front wheels begin to climb ramp they cross toothed bar, giving a toe-in reading on the dial at the left.

2 Toothed bar, free to move sideways, records how much tire is dragged sideways. Same toe-in measurement can be made on rack. Wear on inside treads here suggests alignment is needed.

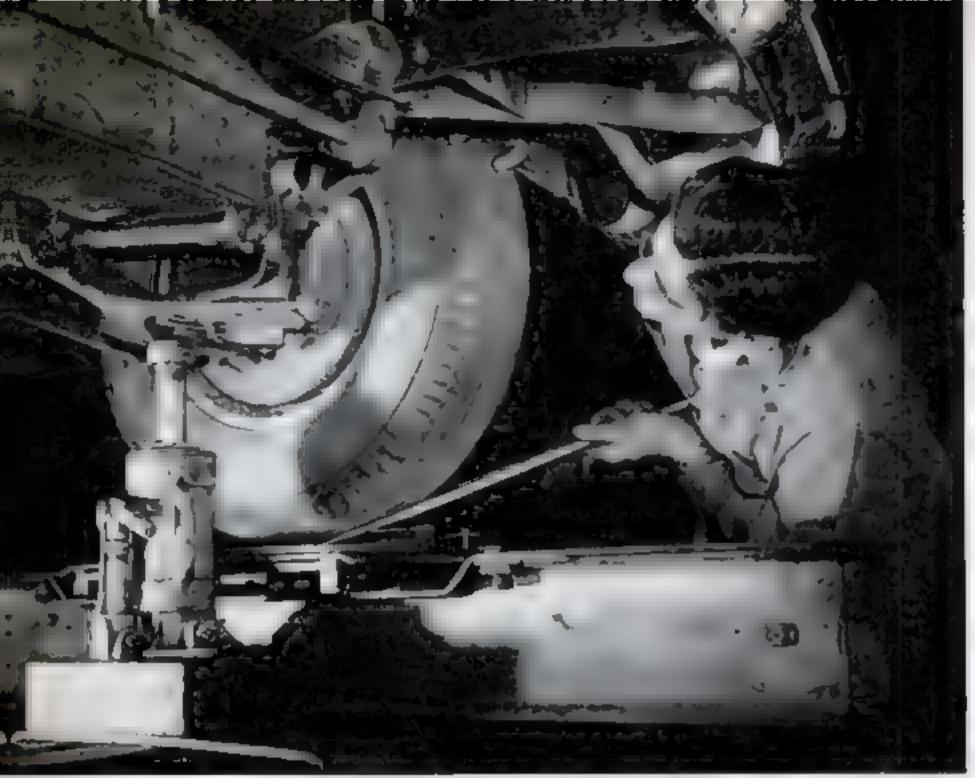

3 Too much toe-in was one trouble, so Nadworny corrects it first thing. Toe-in is adjusted by changing length of the rod or rods. Screw arrangement here facilitates the job.

4 Before other alignment checks, Nadworny inspects wheel bearings, repacks them and removes looseness. Early in game, pressures also are brought to same reading in all tires.

Jacked-up wheels are shaken vigorously to see if there is play in kingpin bushings or knee-action parts. It is rarely worthwhile to attempt wheel alignment if such parts are worn.

6 kingpin and knee-action wear is even was say restored do you be rod or was say to detect it upro particularly both and ak, to a road storing and

Models Show Why Car Wheels Need Alignment By Harry Walton

Terms like caster, camber, kingpin inclination, toe-in and toe-out are confusing until you know the reasons for these simple engineering tricks. Lots of mechanics don't.

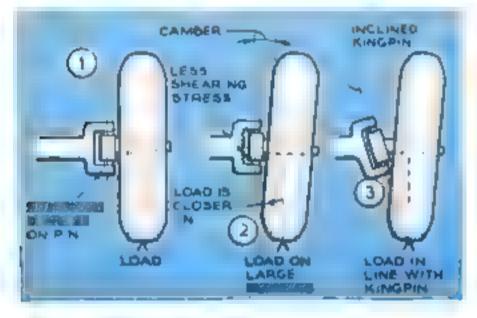

Caster. Ever try to push a piece of furniture with a reversed caster? It wabbles because the point of wheel contact is ahead of the pivot axis. But if the point of contact trails behind the pivot axis, direction is easily controlled. Front auto wheels are given easter for the same reason. In the model at left, above, the single wheel on the inclined pivot axis (kingpin) shows the method

used. While it looks like a reversed version of the easters at the rear, the two are actually alike because, here again, the point of wheel contact is behind the pivot axis.

The multiple-exposure photograph at right, above, shows that both types of castered wheel will swing in whatever direction the model is

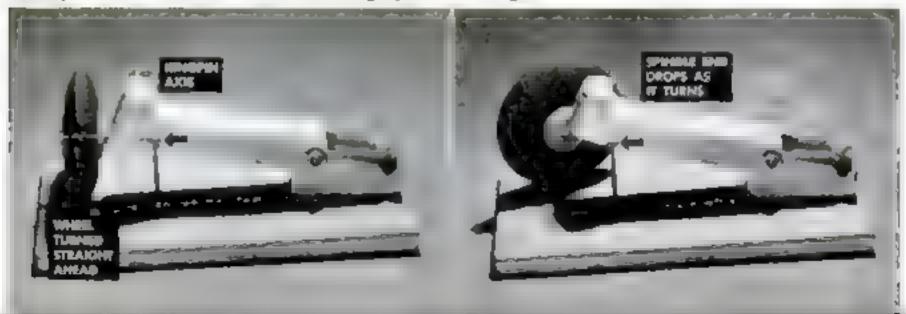

being pushed.

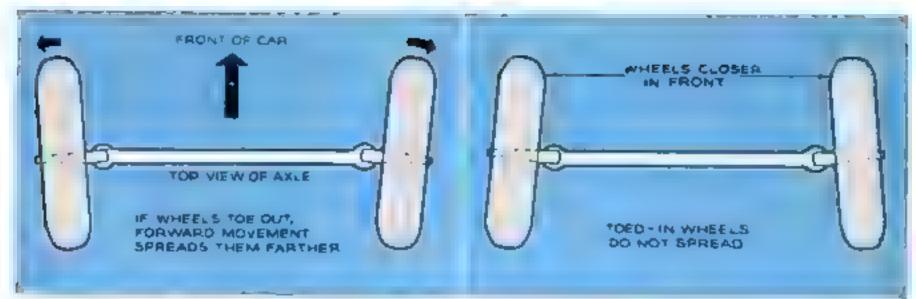

Camber. View of a much simplified wheel, spindle and axic at left shows that the load represented by the weight of the car comes between the wheel bearings (1). This looks reasonable until you consider that this off-center thrust is constantly trying to bend up the spindle and shear the kingpin. By tilting the spindle downward slightly, the wheel leans out at the top (that's camber) and you bring the load line closer to the main bearing, giving it less leverage to shear the kingpin (2). Front-wheel brakes required longer spindles, aggravating the problem. It was met by inclining the kingpin also, so its axis meets the load line (3).

Kingpin inchantion not only brings load of car in line with the kingpin axis, but also adds steering stability, making the car tend to keep a straight course and even come back to it after a turn. The mockup below shows why. With wheel straight ahead, spindle is parallel to ground (or slightly downward because of camber angle). As

steering turns the spindle body, end of spindle tends to swing down farther. Since it can't push the wheel into the ground, it raises the car. Pencil mark (arrow) shows how the axle rises as the wheel is turned from straight-ahead position. The weight of the car seeks to turn wheel back straight.

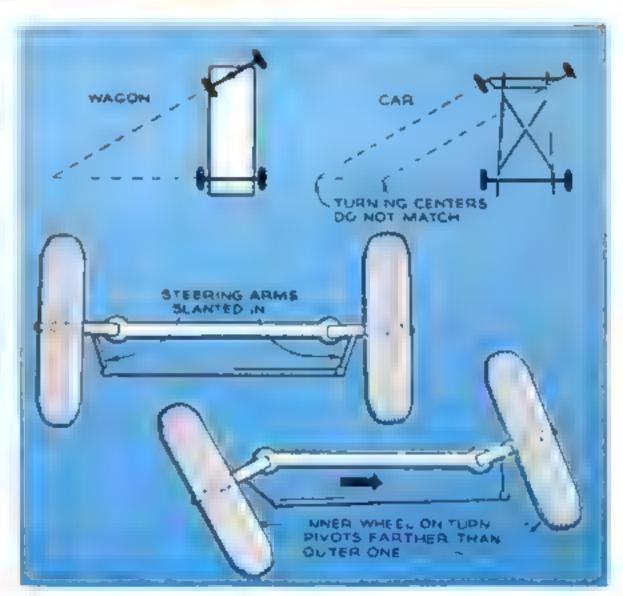

Toe-in. If front wheels swung on their kingpins without a tie rod between them, you can easily imagine how they would both fold back when the axle was pushed forward. Even with the tie rod, tendency would remain, increased by brak-

ing action that would wear tires and transmit every road shock directly to the tie rod. Toeing in the wheels slightly while they are pointing straight ahead counteracts their natural tendency to spread apart.

Toc-out. In buggy days, the pivoted front axle and the fixed rear one swung around a common turning point. But when front wheels were independently pivoted on a rigid axle, swinging both equally gave them a different turning radius, only one of which could be the same as that of the rear wheels. The inside front wheel has to be turned farther than the outside one to have the same turning center. Faced with the problem of having toe-in with wheels straight and toe-out when in a turn, engineers solved it by slanting the steering arms. Move both equally, and the inner one swings farther from the straightahead position

Why tires wear if front wheels don't turn on the same center is shown by sand tracks of a four-wheeled model (left). Rear wheels make sharp clear tracks. Front wheels (in this case with excessive toe-out) throw up a ridge of sand. Bat-

tling each other, they are being dragged sidewise in their own tracks. With proper toe-out, front wheels make tracks as sharp as rear ones (right), proving they are not being subjected to any sidewise thrust.

Snowplow Hitches to Car

WHEN snow piles up in the driveway, you can hitch this plow to the bumper of the family car and quickly clear it away. The plow attaches in a few minutes if you keep the ball members of two trailer hitches permanently mounted on the bumper during the winter. Blades are %" steel. Cheston L. Eshelman Co., 119 Light St., Baltimore.

Liquid Toughens Brake Lining

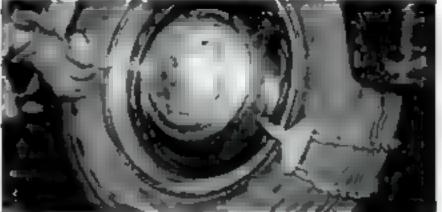

BRUSHED on the brake linings, a new liquid compound of copper and silver is intended to eliminate fading and lengthen the lining life. Used at the Indianapolis Race last year, Cop-Sil-Loy is available for passenger-car use. Abbott Kible Co., 11001 W. Santa Monica Blvd., West Los Angeles.

Springs Keep Tow Chain Snug

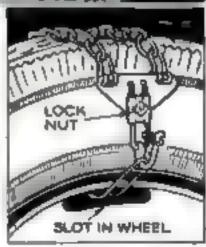

EIGHT feet long and weighing only 5% pounds, this tow chain can be fitted to the bumper of any car. Strong coil springs hold the clamp securely to the bumper regardless of its width. Master Specialty Co., 3016 E Lake St., Minneapolis.

All-Steel Chains Lock on Wheel

A METAL ring locks these emergency chains on the wheel. Two sizes adjust to fit all cars with wheel slots. Lock nuts make the size adjustment. Kon-veen-yunt Chain Co., 1406 Cherokee Rd., Richmond, Va.

Bill's brakes didn't hold worth an atom.
Relined is what he shoulds had 'em.
But instead, with a thrill.
He went down a steep hill
And for brakes used his chin on macadam.

How's Your Muffler?

A leak anywhere in the exhaust system—manifold gasket, muffler or tailpipe—can turn the family sedan into a rolling gas chamber. Here's how to check yours.

You're lucky if drowsiness or headaches warn you in time that deadly carbon monoxide is getting into your car. Don't trust an open window to keep you awake. If you postpone repairs, you are gambling with your life.

Average life of a muffler has been figured to be about 23,000 miles, equal to 2% years of driving for the average U.S. motorist. Look at the speedometer or a calendar to find out whether you should think about yours.

Inspect old muffler for heavy carbon or gum deposits after removal. Their presence suggests faulty ignition. Better check spark plugs.

An exhaust extension is often a practical addition as well as a decoration. It may lessen chance that monoxide will sweep back into car and will carry corrosive fumes away from the body metal.

To check for leaks, tap the muffler and pipes gently with a hammer the next time your car is on a lift. Does the muffler rattle from loose parts inside? Does the rust that is shaken loose show up any cracks or holes? A more thorough check is to pour a little oil into the carburetor when the engine is running. Stuff a rag loosely into the tailpipe to increase back pressure and watch system for escaping smoke.

Grease placed in front end of a new muffler will soon vaporize and coat the inside of the muffler, providing some protection from corrosion.

A dent in the tailpipe, which is sometimes caused by backing into a high curb or driving over an obstruction, is a troublemaker. A whistling noise on acceleration is often a tip-off. Any restriction that impedes exhaust flow will increase back pressure, causing inefficient combustion, loss of power and reduced gas mileage. Back pressure can burn or warp exhaust valves.

Gus Fixes Their Wagen

Of course he could have refused to touch a getaway car—but that was no grease gun in his back.

IT WAS nearly closing time at the Model Garage and Gus was played out. It had been a raw, windy day, he'd had to go out on several emergency calls and now he was hurrying to finish up the last job before quitting time. But he was finding it a bit difficult to concentrate with his attention divided three ways.

First, he was working on Doe Tandy's Model A. Second, the doe himself stood at Gus's elbow expounding an elaborate theory about how humans and automobiles were pretty much the same because they both broke down and had to be repaired. Third—and this was what Gus was really concerned about—an old but big, black sedan had been parked across the street for the last half-hour with two strangers in it who seemed to be keeping a mighty sharp eye on the doorway of the Model Garage.

Gus Gets the litters

It was just his imagination, Gus decided. Gloomy weather and fatigue had upset his nerves. He finished tightening the cylinder head on the Ford, twisted in a new set of plugs and closed the hood.

"Okay, Doc, she's all yours."

Doc Tandy gave him a keen glance as he left. "Gus, you better go home and get some rest."

Gus peeled off his dungarces. He figured

he'd leave the sweeping up to his helper, Stan Hicks, who had borrowed Gus's car and would return it to the garage later in the evening. Gus looked around at the next few days' work—two overhauls and a ring job. Then he flicked off the lights and reached to pull down the doors. . .

"We got a car for you to fix " The voice slammed across his shoulder. Gus jumped.

"I'm sorry, I'm closed for the night."
"Inside, grease ape!"

Two Customers in a Hurry

Gus drew back when a pistol barrel gouged his ribs. A sneer twisted the pasty face, and piggish eyes glittered back at him. The man made a motion with his other arm, and the black sedan rolled into the darkness of the garage.

"It's simple, buster. Fix our car fast and vou'll be okay. Don't, and I separate

you at the belt line."

"There's all-night garages in town, and you don't need a gun to get service. If you're after my day's receipts, they're in the bank already!"

The other man stepped from the car. He was younger, neater, but there was an odd

slant to his face. He spoke quietly.

"Our apologies, dear sir, but sometimes a gun is necessary. Perhaps I should explain. In criminal nomenclature we are known as escaped cons. A good friend of ours provided this car, but it doesn't run well." He

94 POPULAR SCIENCE

looked around at the three dismantled cars on the floor. "And really, with no other car here in running condition, you offer us no choice but to insist that you fix ours. By the way, don't underestimate my associate's willingness to shoot. One more would make no difference. A prison guard suffered a slight case of trigger mortis last night!"

The young man chuckled over his joke.

"I could call the police."

"You'd never reach the phone."

The convict's smile broadened.

"And shooting me won't get your car fixed!"

"No, but there are other places, and you

don't want to die."

Gus looked from one man to the other. They weren't bluffing.

"Okay. You win."

"Now you're getting smart. Here's the pitch. This heap sputters every time you step on the gas in low gear, and in high over 35 or 40 it misses badly."

"That isn't so serious."

"It's serious if we have to play tag with a few patrol cars. Get busy."

Gus stepped away from the prod of the gun and opened the hood. It was a 1940 Lincoln Zephyr. He plugged in the trouble light and started the engine. It idled smoothly and sounded in good shape for its age. But,

when Gus pulled on the accelerator arm and revved the engine, it sputtered erratically

and backfired.

Gus rolled up his sleeves. The pug still held the gun on him.

"I'm not going to try anything. Why don't

you put that thing away?"

"Because I don't want to get belted with a wrench, that's why! Just do your work there."

Gus tackled the carburetor first, on the assumption that it was out of adjustment or clogged by dirt. But it was wasted motion.

'I guess it's your ignition system."

"You guess! Look, you find it quick! We ain't got all night!"

Gus tried the plugs next. It took time to

inspect 12 on the testing machine. And while he checked, he heard them whispering rapidly in back of him. Only one word reached his ears—Chicago.

Gus put the plugs back in, and as he tightened up the last one on the forward end of the engine, he remembered something. There was a certain peculiarity to the '40 Zephyr that might . . . but there wasn't time for that yet. Gus wiped the clammy sweat off his face.

"Work!" The older man waved his gun

toward the engine.

The distributor points were clean. They were pitted, but not enough to cause trou-

ble, and though they were getting old, the contact metal wearing thin, they checked out all right when he tested the setting.

Gus didn't waste time putting an instrument on the coil. Instead, he got a new one and hooked it up. Looking hopefully at his captors, Gus slowly rolled up engine speed. Just at the instant he thought the danger point had been passed the spitting began again.

Gus leaned on the car and tried to stop trembling. His mind searched frantically for an answer, but it was hard to think with a gun pointed at him.

"Shake it up!"

"Look," Gus exploded, "you might as well get it into your pin-size brain that this may take a while!"

The older man edged forward menacingly, but the other stopped him.

"Let him think."

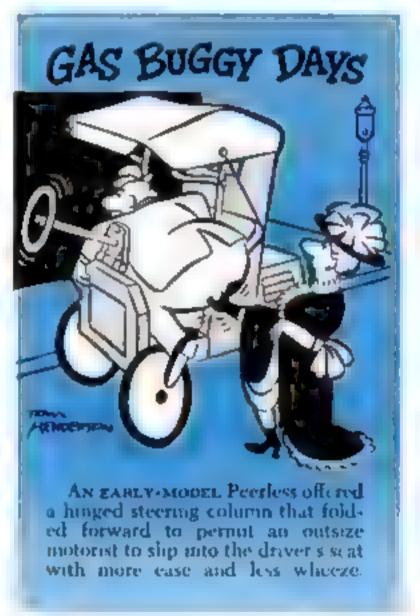

Gus remembered the condenser then. There again, rather than take time to check it, he installed a new one. As a second thought he checked the insulation on the wiring, and still found nothing.

The end of the road had been reached now. He had checked everything he could

without tearing the engine down,

"I've gone as far as I can. You better find another mechanic."

[Continued on page IIII]

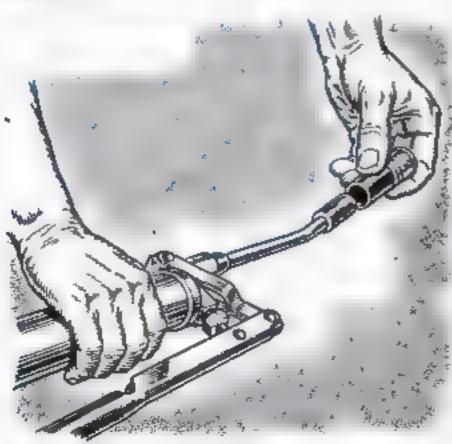

FROM THE MODEL GARAGE

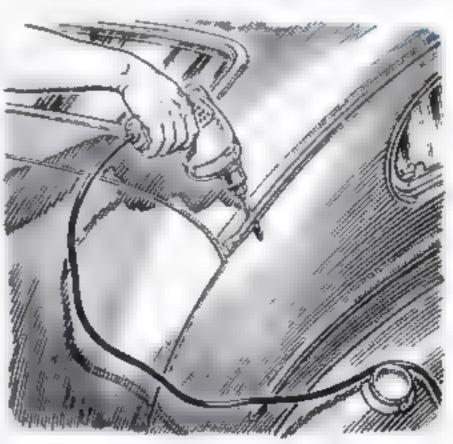

Paper wrapping can be removed by dropping a new tire so that it lands on the tread. The casing will flex and snap the paper. Don't use a knife; it may shp and damage the tire. Be sure that no bits of paper get inside, because they can cause tube failure.

Two handy funnels for shop use can be made by sawing in two a throwaway type of oil filter. Remove the inside element. Thread two short pieces of %" pipe, screw them into the already threaded holes in each half, and the funnels are complete.

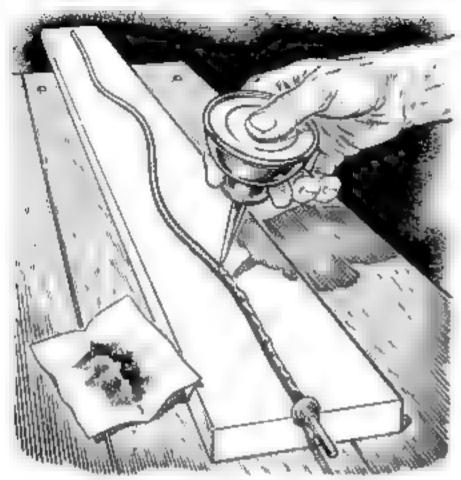

A used shotgun shell slipped over the nozzle of a grease gun will protect the coupling and keep out dirt. Dust and dirt that collect in the lubricant are sometimes driven into the grease fitting. A 12 gauge shell fits the nozzle snugly.

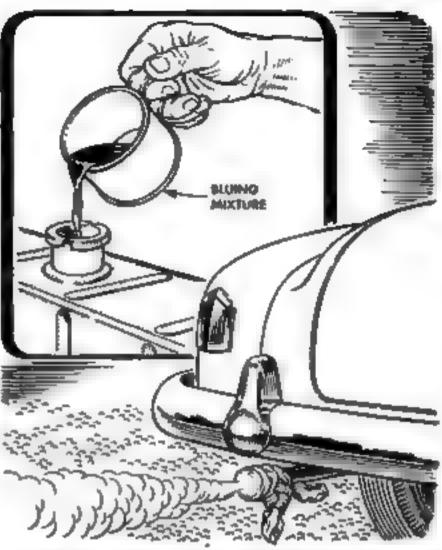

If water drips from the rain troughs and seeps into the trunk, you can divert most of it by simply closing the trough ends and drilling small holes an inch or so toward the front of the car. Close the troughs with solder or by squeezing them shut.

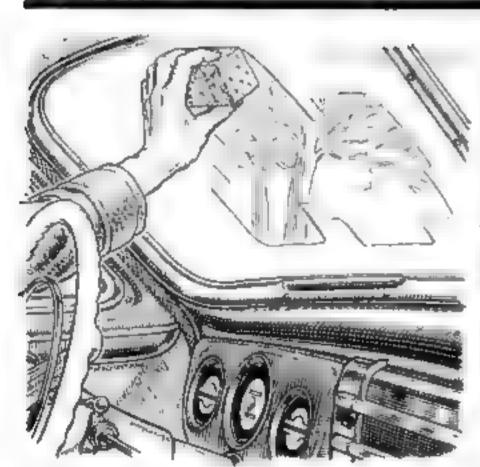

MORE Hints from the Model Garage

Oraphite is the ideal lubricant for a speedometer cable, but getting it into the cable sheathing may be a problem. Here's one way of doing it: remove the inner cable, lay it on a board, apply the thinnest possible line of light oil on it, spray powdered graphite on the oil until the oil is blotted up and replace the inner cable.

A head gasket can be checked for leakage by adding two spoonfuls of washing bluing to a cup of permanent antifreeze, pouring it into the radiator, tying a cloth over the tailpipe and running the engine. If there's a leak the bluing will color the cloth. The antifreeze will help you in locating the leaky trouble spot.

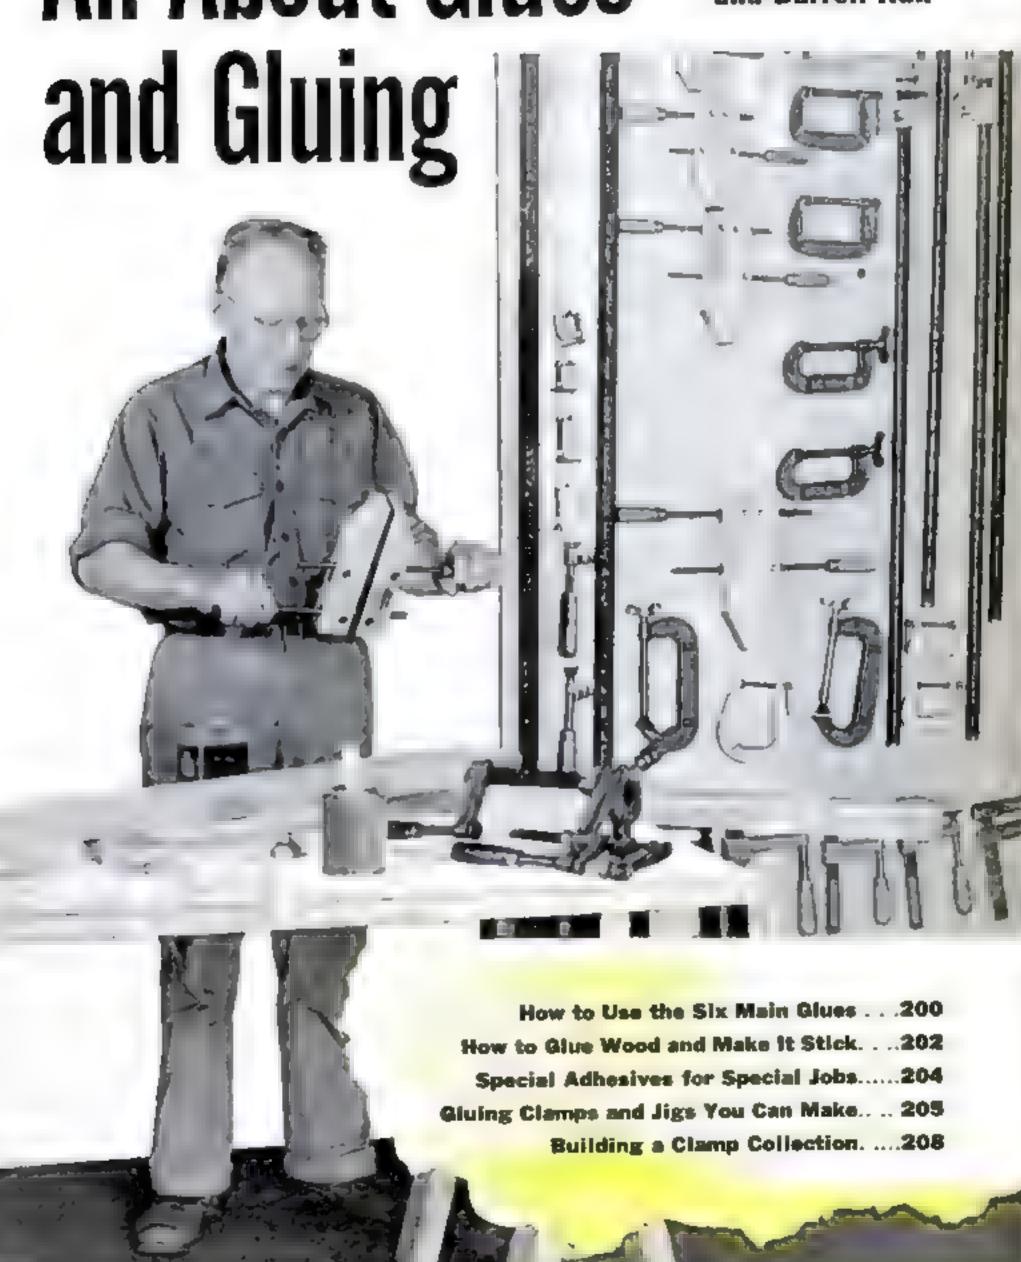

Windshield fog and steam can be wiped away quickly with a cellulose sponge. It will remove dut and grease streaks and absorb considerable moisture before becoming saturated. A small inexpensive sponge will do the trick.

If send is carried in a couple of one-gallon, screw-top cans, you can simply pour it under the tires when you get stuck on ice or snow. No need for a shovel to spread it. The cans are better than a box, for the sand can't scatter through the trunk. Here's how to pick the glue to suit your work and shop, how to apply it, and how to use clamps to make it stick.

All About Glues

By Paul Corey and Darrell Huff

THE fellow whose slogan is "hit on a good thing and stick with it" is going at gluing the hard way. No one glue is the glue for every job.

In your everyday workshop operations you may not need every glue in the book, but you will need several—possibly three or four. It pays to know which glue is good

for what job so that you can choose wisely.

To complicate matters, two identical jobs using the same wood, the same kind of joint and the same clamps will require a different glue if one workshop is warm and the other chilly. The owner of the warm shop can take full advantage of the plastic resin and resorcinol glues (they set quickest and strong-

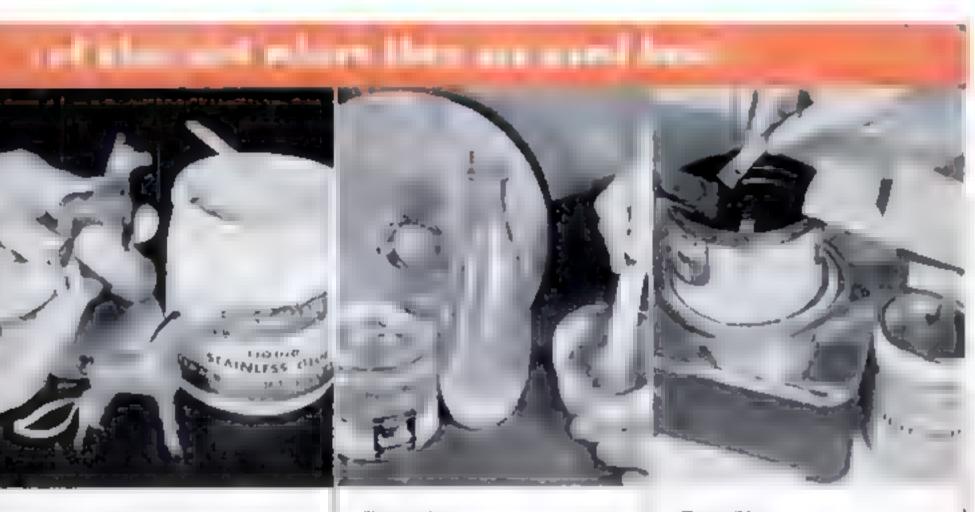

Type Glue L cand Annual and Fish Glue	Type Glue Powdered Casem	Tope Glue Resorem 1	
Brands include Le Page, Franklin, Rogers	Brands (nelude Casco.	Brands include Cascophen.	
Good for Furniture and cabinetwork, general wood gluing.	Good for General woodworking, espe- cially only woods; teak, yew, lemon.	Good for Outdoor furniture, boats, items that may be soaked	
Not Good for Outdoor furniture or anything exposed to dampness.	Not Good for Acid woods unless staining is not important; outdoor furni- ture.	Not Good for Work done where tempera- ture is below 70".	
Advantages Strong, easy to use, light color, fills cracks and gaps in joints, resists heat, mold.	Advantages Strong, fairly water resistant, works in cool locations, fills poor joints.	Advantages Very strong, waterproof, works well with poor joints.	
Disadvantages Not water resistant, must be warmed if used in cold location.	Disadvantages Must be mixed 15 min. before using, subject to mold, stains dark woods.	Disadvantages Powder and catalyst must be carefully mixed, has dark color	

est in warm surroundings), while the poor guy in the unheated garage must use a casein glue.

Add to this the problems of gluing oily woods (teak, lemonwood, yew and other oily tropical woods) or poorly fitted joints, and you'll find that one glue will glue all of the jobs some of the time and some of the jobs

all of the time, but never all of the jobs all of the time.

For a speaking acquaintance with all of the glues used for woodworking, study the chart below. With it as your guide you can select the glues that fit your work and your workshop, Brands shown are typical of each type of glue.

Type Glue White Polyvinyl

Brands include Cascorez, Wilhold,

Good for Model work, paper, leather, small wood assemblies, mending.

Not Good for Anything requiring resistance to stress and water

Advantages
Always ready to use at any
temperature, nonstaining.

Disadvantages
Has high cold-flow after setting. Good only for light work.

Type t-lue Plastic Resin

Brands Include Weldwood, Cascamite

Good for Furniture, veneering, work exposed to dampness.

Not Good for Oily woods or poorly fitted joints not clamped.

Advantages
Very strong, waterproof, leaves light-colored joint.

Disadvantages
Must be mixed for each use,
needs heavy clamp pressure.

Type Glue Flake Animal

Brands include Craftsman.

Good for Quantity woodworking, furniture

Not Good for Anything that may be used or stored in damp places.

l
l

Disadvantages Inconvenient for quick or occasional use, must be kept hot.

How to Glue Wood and Make It Stick

When a glue joint fails, there's a reason. But post-mortems are no substitute for durnbility. Check your own technique against the pointers below. Clamping deserves special attention (see following pages). Pressure should be evenly distributed and sufficient to squeeze out the excess glue but not so great as to starve the joint of adhesive by squeezing it dry.

Measure it earefully if you want strong joints. There is a correct amount of water or catalyst for each powdered glue. Don't guess at proportions. If you use flake glue, mix each ounce with 1% ounces of water, let stand overnight, use hot.

Clean old work. When regluing a broken joint, scrape or sandpaper down to bare wood. Most glues work by penetrating the porous wood grain, they can't get a grip on surfaces sealed by old glue or paint.

Apply glue right. Don't wear the glue brush to a frazzle using it in the wrong place, such as filling cracks (below). There are many better ways of putting glue where you want it. Old

Clamp it properly. Shown above are two roads to a weak joint. At left, no clamp is used; at right, clamp is too tight, forcing most of glue out of joint, and there are no blocks to spread pressure and protect work.

Special Adhesives for Special Jobs

Catalyst-type cement does a really tough job on china, pottery, glass and metal. Here it easily mends a broken coffee-pot handle, providing a strong bond that resists heat, moisture and stress of handling.

THERE'S a wide choice of adhesives for sticking together an even wider assortment of things not made of wood. Most of them work on many materials.

Cellulose household cements (such as Duco, Ambroid, Testor's and John Collins) do a fair job on practically anything. Use them with china, glass, pottery, leather, fabries and plastics. Joints should be clamped.

Black mastic adhesives (such as Magigrip, Miracle Black Magic) work on both porous and nonporous surfaces. They'll grip tile, glass and mirrors, metal plates, asbestos board, bricks and a lot of other things. They don't require tight clamping but won't take much stress.

Flexible cements (such as Casco Flexible) are light-colored and handle many similar jobs. Spread this type on both surfaces, let it get tacky and join. Good for joining porous materials (wood, paper, felt, canvas, plaster and leather) to each other or to metal, glass, foil, plastics or linoleum. A surprisingly strong bond can be had with such difficult combinations as wood-to-metal.

Catalyst-type cement (such as Stik-All) is a new development for problem materials like china, glass, pottery and metals. It does a superior job without tight clamping and stands up to heat, but you have to mix it for use and it's tricky to mix less than a dollar's worth.

Special-purpose adhesives are best used for critical jobs. Stick a plastic toy back together with plastic cement, but if you work regularly with a plastic, get the solvent cement made for it (toluol and even carbon tet work on most molded plastics).

One specialized adhesive is a new type for putting down counter tops of the Micarta type. Stix and Armstrong's D-243 are examples. They grab so fast that you can put the counter top tightly in place with a roller or mallet without clamping. Of course, with proper clamping, you can do as well with ordinary resin glue.

GLUING PROCEDURE

Type Glus	How to Propers	How to Apply	Minimum Room Temperature	Setting Time at 70° Sattwood—Hardwood	
tiqvid an mal ar flih	If room is cold, worm give to 70" or higher,	Spread on both sur- faces; let get tacky before joining.	Sets best above 70°, but can be used in colder room if give is warmed	12 hours	24 hours
Cosern	Mix equal parts give and water Let stand 10 mis and stir again	Use within 8 hours after mixing. Put on a thick coat,	Any temperature above freezing, but the worm- er the better	2 hours	4 havry
Poly- vinyl	Comes ready to use.	Spread on and clamp at once,	Any temperature obove freezing. Sets foster if warmed.	20 min.	30 mis.
Flastic Force	Mix 2 parts powder with V ₂ to 1 part water.	Apply thin cost to eas serface only,	Most be 70° or worm- er Will set faster at 90°	4-6 hours	5-7 hours
Resor- cinol	Mix 3 parts pewder to 4 parts flavid cotalyst.	Apply thin cost to both surfaces, clamp.	Must be 70" or warmer Will set faster at 90"	6 hours	16 hours
flake or powdered enimal	For each as, give add 1½ as, water (softwood) or 2 as, (hardwood) Keep hat and Use at 140°.	Apply with brush, work fost and worm joint for best results.	Must be 70° or warm- or, A heat lamp is useful during assembly and setting period,	12 hours	24 hours

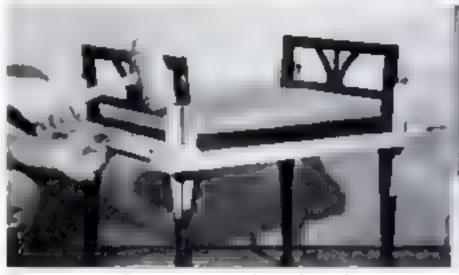

FOR YOUR POPULAR SCIENCE MONTHLY INFORMATION FILE

PREPARING the work and getting glue on it is only half the job, holding the parts together while the glue takes a grip on them is the other and possibly the more important half

Clamps are usually accumulated through the years, and chances are you don't have all the clamps you need. You can still build good healthy glue joints though, using homemade methods of applying pressure. Even if your shop wall is loaded with clamps, you'll find times when no factory-made clamp will quite suit the job. One of the ideas that follow may be the answer to the job that sticks you.

Utilize the Squeezing Action of Wedges

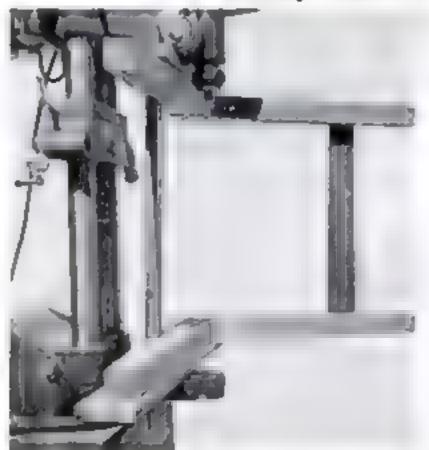

Wooden wedges can supply a lot of pressure. Tenon joints in stool at left above had loosened with age. Old glue was cleaned out, new glue applied, and joints forced tightly together by wedges driven into a wooden frame made slightly larger than the stool. Strips of walnut and maple (center photo) are glued together in a wedging jig consisting of two blocks of wood

nailed to a flat board. At right above, the wedge becomes part of the joint. Force a hardwood wedge into a saw kerf in the end of the peg or chair rung and apply glue. As the rung is driven into the blind hole, the wedge is driven all the way into the cut, expanding the rung end tightly against the sides of the hole and squeezing out the excess glue.

Let Gravity Come to Your Aid in Clamping

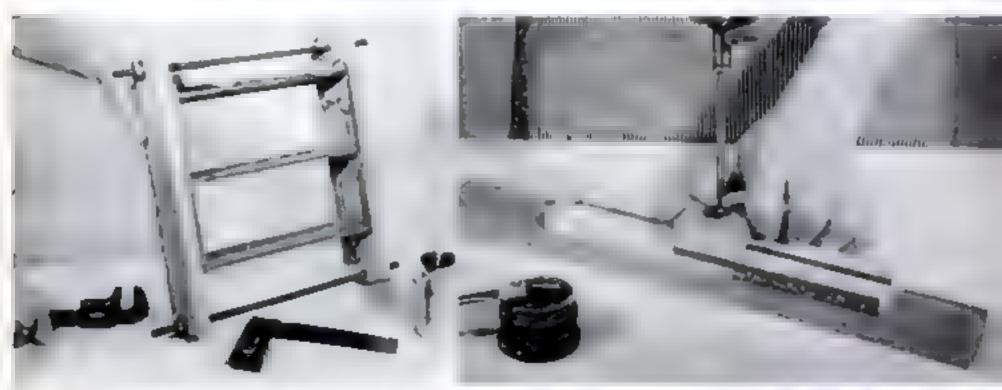

Heavy drill-press head provides plenty of weight in easily handled form. Just put the glued-up work together, set it on the drill-press table and case the head down on it when you release the column clamp.

Bricks, piled on top of each other, concentrate weight on one spot with little effort on your part. Here they put a 90-lb, load on less than one square foot. A large tub can also be placed on work and filled with water.

Let Bolts Put the Pressure on Your Work

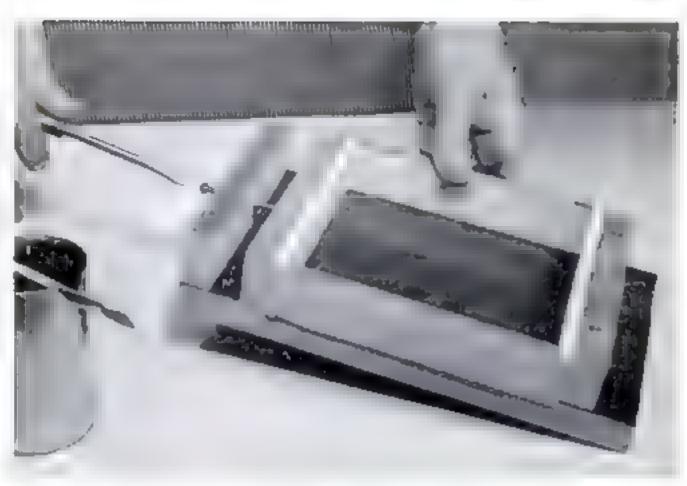

Two threaded rods or long bolts put the squeeze on many awkward assemblies and boards should be thack enough to eliminate any tendency to bow out in middle. Check squareness of work as you tighten.

Jig for lap joints. A straight board, bolt and block of wood make this jig for clamping two half-lap joints at once. Straight board assures that splice will be as straight as single long piece. Waxed paper keeps work from sticking to jig.

Drawer jig is a widehed version of homemade bar clamp. Two bolts instead of the one shown here will give more pressure and permit equalizing it. Larger jigs of this type should have three or more tightening bolts. Handy glue container in foreground is tin can notched at both sides to keep glue brush handy.

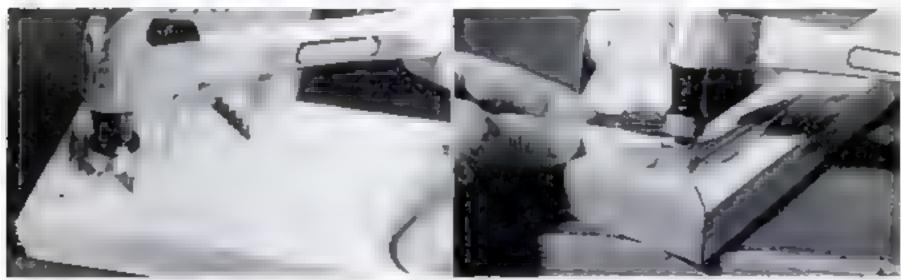

Improvise with What You Have to Get Clamping Pressure

Small clamps do big job if you use them right A set of wooden hooks—strips of wood with blocks nailed to them—allow small, inexpensive clamps to do the work of large ones. Only four clamps are needed for this drawer-gluing setup.

Spanish windless still comes in handy. A pair of rope tourniquets pulling two stout lengths of himber against the work is the granddaddy of all clamps. For extra pressure, wet the rope so it will shrink on drying

Permanent Fasteners May Substitute for Clamps on Some Jobs

Corrugated fasteners are made with corrugations at slight angle toward each other to pull work together when they are hammered into it. They are especially useful for rough work or where only one side shows. Chevron type is bent at right angles to go around a corner joint. This kind of fastener carbe used on narrow work. They are packed was a small tool for counterstoking them neatly of sight.

JANUA

ONE woodworking expert says "Clamps are the craftsman's third hand." And, he adds, the most annoying deficiency in the average workshop is in the clamping devices—the ones that aren't there.

You probably have a number of small C clamps, so begin your collection with a few long clamps—either the bar type or the kind that fits on X" pipe. Next to add should

Long clamps are a "must" for large framing and cabinetwork. The two vertical clamps shown are the poor man's pal. The factal parts aren't expensive, and cao be quickly fitted to long wooden hars. Other two are 6' bar clamps

Clamp fixtures that fit on 3" pipe head threads on, foot slides—are about is efficient and rigid as costker bar an as. Sets of pipes of different lengths can serve one set of fixtures to another a variety of work

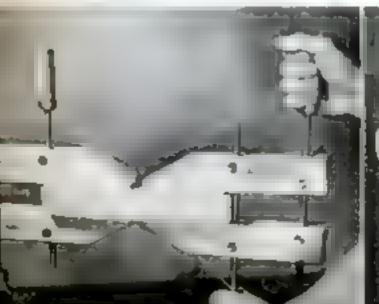

Short bar clamp is cross between regular bar clamp and C clamp. It can be adjusted to size in an instant by sliding the head (in some models the foot) along the bar, a good feature when your hands are full.

Hand screw (frequently called a "Jorgensen") is the wood-workers clamp. Its wooden laws will not damage the work Clamp at right below is not adjusted properly; it should grip the work with parallel jaws, like one at left.

Uneven surfaces like this aroung board end are clamped with case with an adjustable hand screw. Screws are quickly opened or closed down to size by gripping both handles and cranking the screw in either direction.

Deep-throated C clamps will reach into the center of small work where the pressure is most needed. These are of all-metal construction and small wooden pads must be used to protect the work from their jaws.

be some wooden-jaw hand screws—the larger the better. At this point you're set for most jobs and you can think about some specialized clamps.

Press screece head the list of specials; they are very handy for rigging up all sorts of gluing devices, including veneer pressure.

Edge-clamp fixtures attach to short bar clamps for gluing edge trim along counter

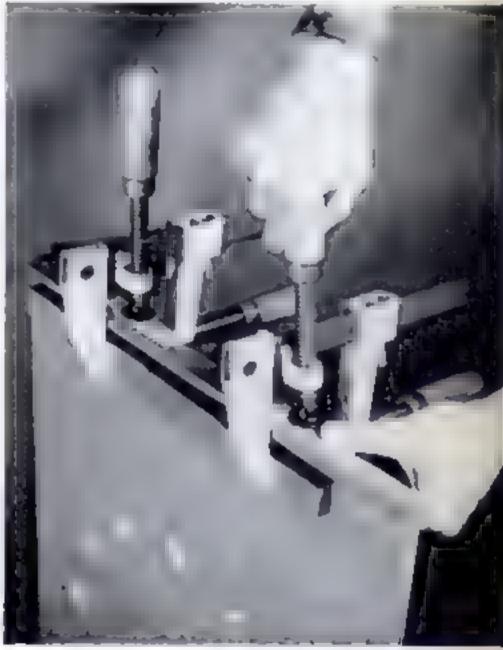

tops. Miter clamps make frame building easy, and a band clamp is practically a necessity if you are working with round or curved shapes. A set of spring clamps is mostly for convenence (they can be applied with one hand while the other holds the work), but once in a while you'll find a job where nothing else will work. The same is true of surface clamps

Band clamp wraps itself around curved in round work and squeezes it from all directions. You can get these clamps with either shall are heavy-canvas bands. Canvas is best for measure shapes, steel for round or oval shapes.

Surface clamp or bench clamp is attached to bench top with special bolt that fits in T slot. When clamp is removed, head of holding bolt slips down into counterbored hole, leaving bench surface clear.

Falge-clamp fixture attaches to short bar clamp for gloing strips to board edges. Bar clamps are screwed tiglitly on board and edge clamp then applies pressure against the edge of the board. Wood strip along edge equalizes pressure.

Spring clamp is best suited to light assembly work. Its chief advantage is that it can be put on with one hand while other holds the parts. These overgrown clothespins are also good for small veneering jobs and border-inlay work.

Universal clamp is a real tricky gadact. You can place it on a fitted infer joint, open joint by twisting center handae apply glue and then bring nater tightly together again to set. It's abnost like having a second pair of hands.

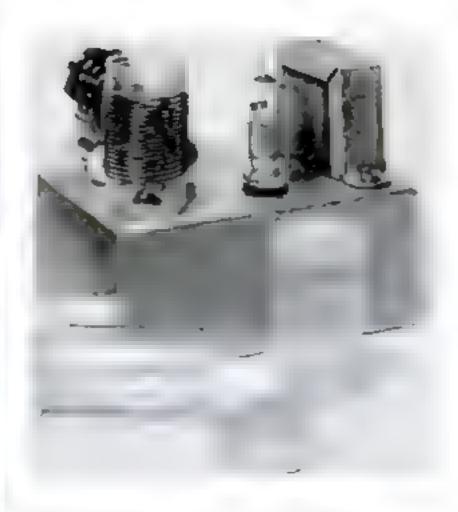

Press screw is heart of many special gluing presses. Four or more can be made into a press for veneering panels. Here one is used to cement implement to wood for making block prints. Press ire is vertical, work won't slide.

Makes Own Gasoline Tank

Two 50-gal, oil drums were welded together by Melan Arnold of Steuben County, Ind., to form this 100-gal, gasoline tank for his farm. The angle-iron legs and cross braces were salvaged from an old windmill tower.—A. E. Holden, Angola, Ind.

Coils Wrapped on Bottles

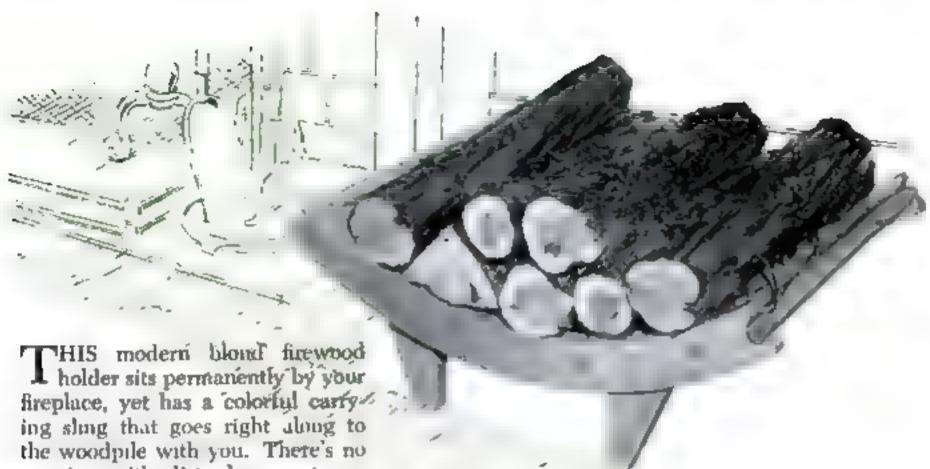

ALL-PLASTIC pill containers, available at most drugstores, make swell coil forms for UHF radio equipment. Those pictured here cost about three cents each. You can mount them on a chassis by drilling holes in the bottoms for machine screws.

IN JANUARY for dangerous falls. Only auto accidents kill more people each year than do falls. January is usually the peak month for tumbles at

ple each year then do falls. January is usually the peak month for tumbles at home. But not, as you might expect, because of ice. Two-thirds are indoors.

In THE steel industry, once plagued with falls, a man today can expect to work a lifetime and never take a spill. Steel's prevention methods can be used in your home. You will virtually eliminate falls at home if you take time to (1) keep loose objects off stairs and away from middle of floor; (2) tack down linoleum or rugs; (3) keep light cords near baseboards; (4) install bright lights in dark rooms; (5) keep furniture near walls—not in center of room; (6) climb on step stools or ladders, not chairs, and (7) put handrails on stairs and over bathtub.

holder sits permanently by your fireplace, yet has a colorful carrying sling that goes right along to the woodpile with you. There's no messing with dirty logs or transferring a heavy load from a separate carrier to the woodbox. The holder does both jobs in one. And to clean it, you just shake the dirt and bark chips into the fireplace.

Frame. I made mine out of birch, but any hardwood will do. The two side pieces are a full inch thick, 2" wide, and curved to an 18" radius. Drill the %" holes for the dowels and saw the pieces to shape.

The legs are cut from the same I" stock and glued and screwed to the inside of the side pieces. Drill pilot holes for the screws to avoid splitting the wood.

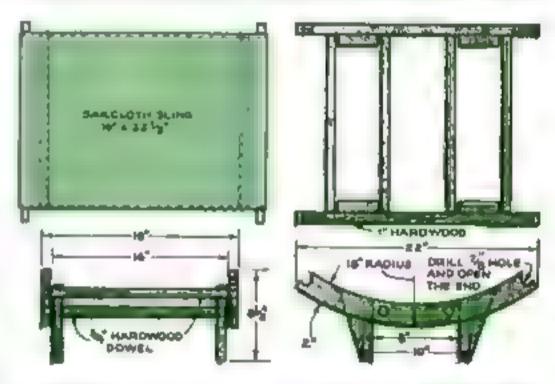

Cut the %" dowels to 18" lengths and glue them into the side pieces. When dry, sand the entire assembly with very fine paper, apply several coats of clear lacquer, and wax and polish.

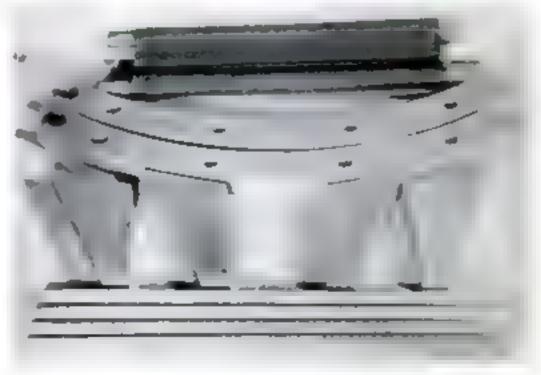

Sting. This is a rectangle of brightly colored saileloth folded double, stitched down both sides, then looped around the removable end dowels and double-stitched. The dowels fit into the notches at either end of the frame to hold the sling in place.—John Rogers, Dallas.

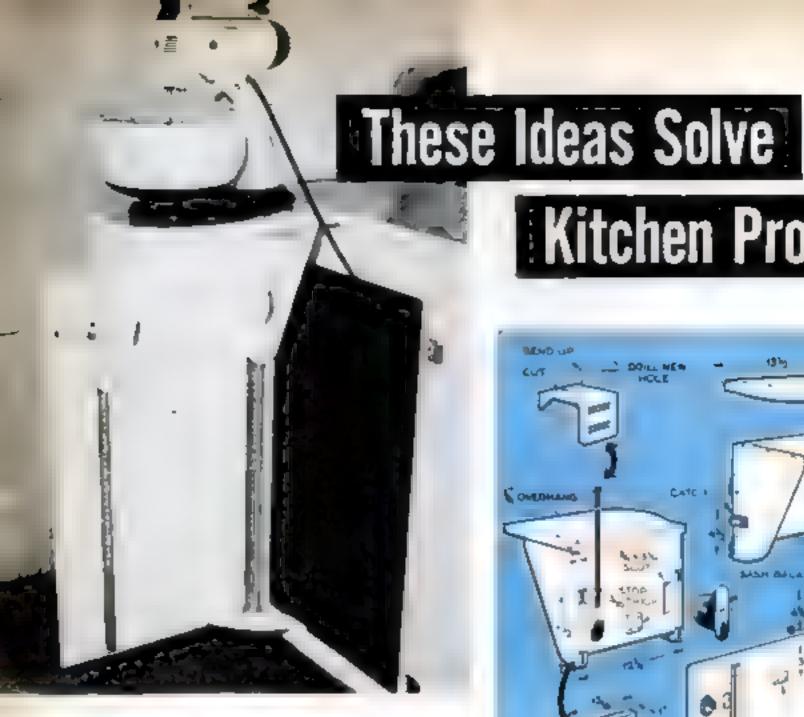

Modern Woodbox Has Lift-Out Sling

A handsome fireplace ornament, it also serves as a carrier to help you lug in a new load of logs.

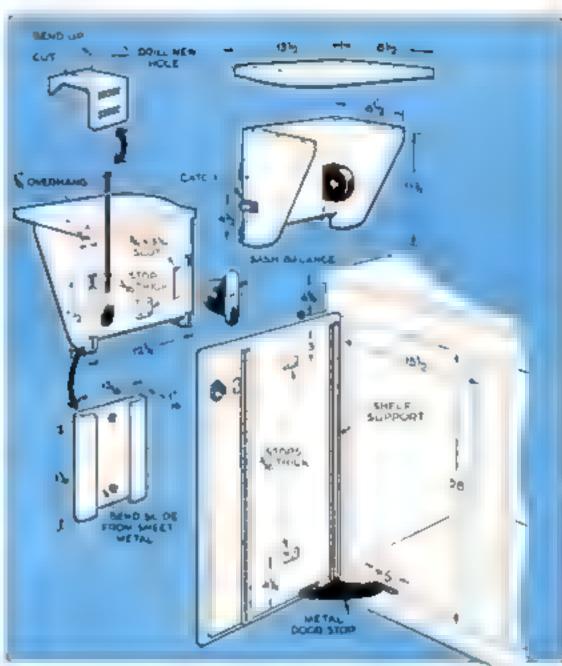

Mixer Disappears into Its Cabinet

() PEN the dear pull up this mixer, and it's ready to use. When the job is done shove down the platform. close the door, and the mixer is safely out of the way until the next time the ousewite needs it

Spring mounted. This solution to the common problem of what to do with the bulky mixer is achieved with two hardwarestore items-a pair of spring sash balances and a pair of adjustable-shelf supports. The supports serve as a track for the sliding unit and the balances make it easy to raise and lower. Stops limit the unit's travel and a catch holds it level with the top of the counter. The mixer is permanently plugged into an outlet inside the cabinet.

The shding unit will fit most standard cabinets. The door opening is the only critical dimension. To accommodate the ordinary mixer, it must be at least 15" wide and 25" high.

The shelf unit should be built first, using X" stock. Modify the ends of the sash-balance tapes by cutting off the book, bending up the end and drilling a new hole. Install the

Kitchen Problems

balances in slots cut in the back of the shelf unit

Track and slides. Bend four slides from heavy sheet metal so they are an easy sliding fit on the shelf-support tracks. Mount them on the back of the shelf unit, spacing them to suit the tracks.

Attach one track to the hinge side of the cabmet door so that when the door is open the mixer shelf will fit up snug against the counter top. Then position and align the other track. Locate the lower stop on the door so that the mixer unit will clear the door casing. After attaching the tape ends to the upper part of the door, screw the upper stop in place. A stop to hold the door open while the mixer is up can be cut and bent from sheet metal. Screw the mixer base to the shelf.—Keith Heryford, Cedarville, Calif.

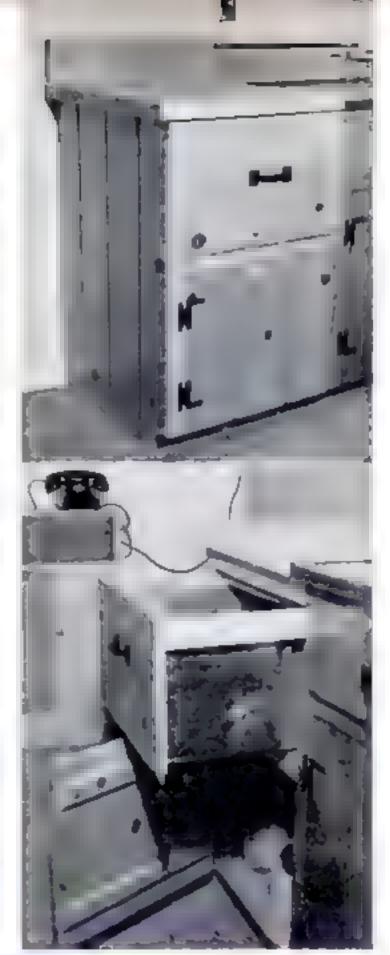

Chopping-Block Cabinet Has Built-In Breadbox

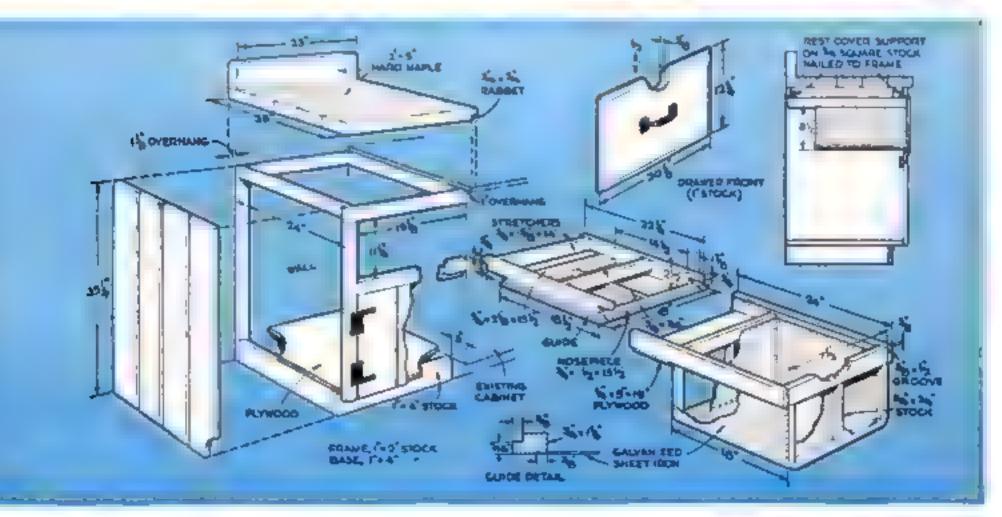

FEW cabinets can qualify for three kitchen jobs—but this one does. Its hard-maple counter is a handy cutting board. It keeps bread fresh in a metal pull-out box. And it stores a lot of equipment on its four square feet of space behind the door. Material was conserved in its construction by nailing framing members to the wall and the end of an existing cabinet. The end was covered with 1" pine boards, recessed behind the vertical facing strip, and the door was made of the same stock held together by two battens.

Maple top. For the top, 2" by 5" hard maple, dressed four sides, was glued up and then trimmed to size. A X" by X" rabbet cut along one edge allows the top to rest firmly on the adjoining counter.

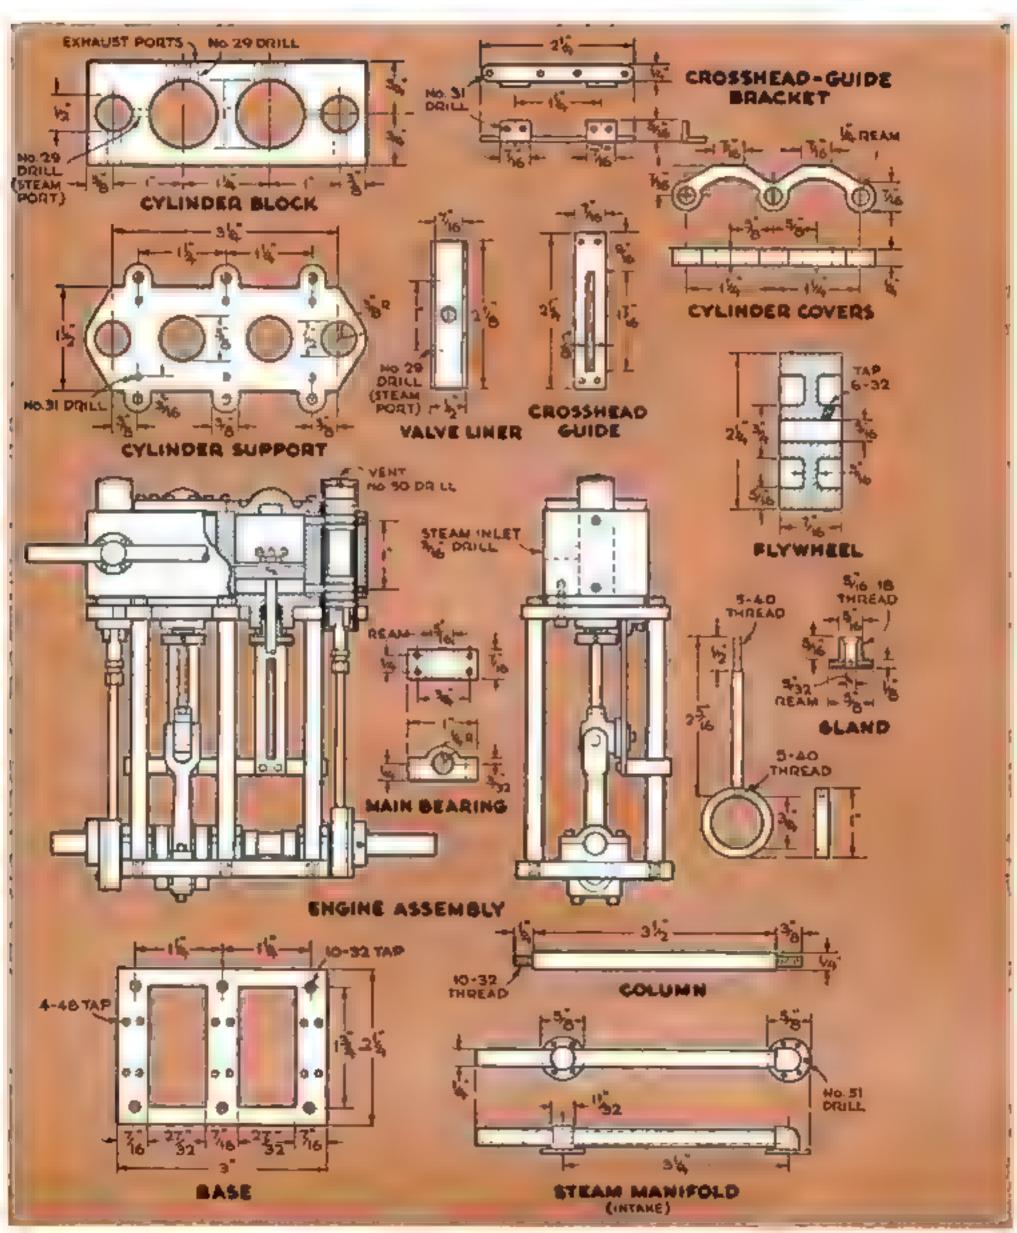

The drawer was begun by building the end frames and covering their inner faces with light-gauge galvanized sheet, attached with blued gimp tacks. An 18" by 27%" piece of galvanized sheet was then pre-bent with 1" dowels to conform to the curvature of the bottom corners of the frame and also tacked in place. Addition of the grooved runners completed the box.

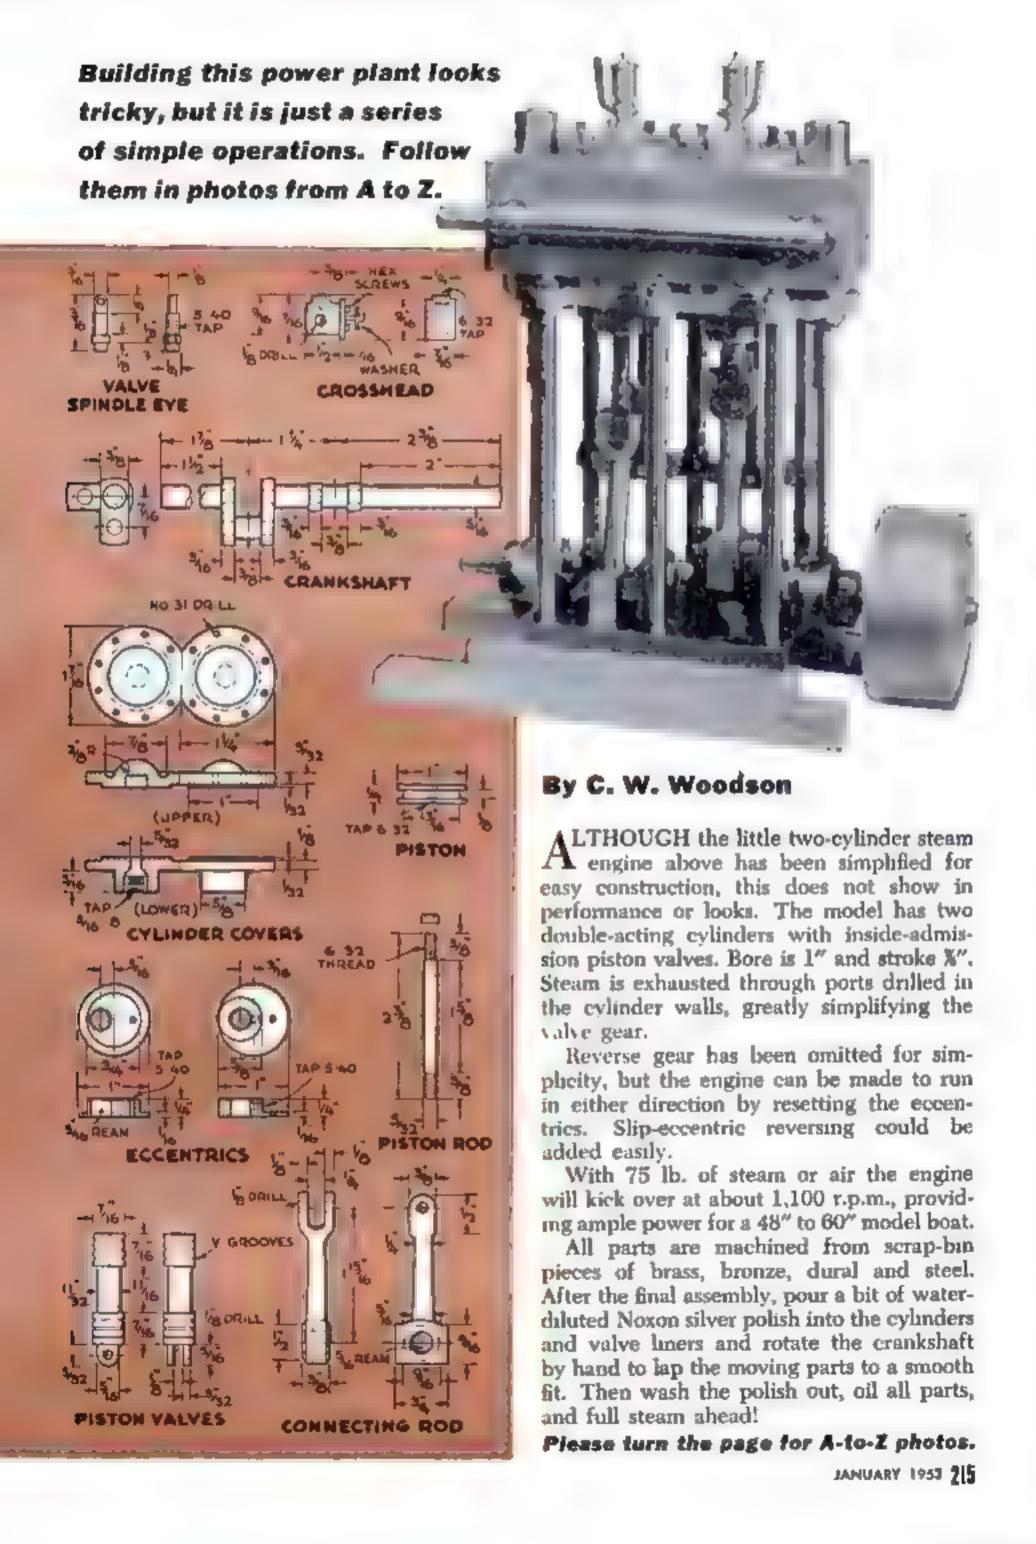

Covered drawer. The drawer-guide assembly also was covered with galvanized sheet on the lower face. Thus, the breadbex has a built-in cover. This assembly was installed in the cabinet by resting the supports on X"-square stock nailed to the front and rear cabinet frame. The maple top was then attached with long wood screws driven upward through the horizontal face strip in front and X"-square strip at the rear.—Stanley Lehrer, Pompton Lakes, N. J.

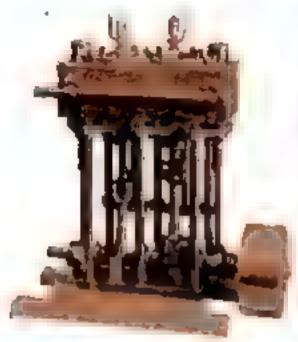

Model Marine Engine Requires No Castings

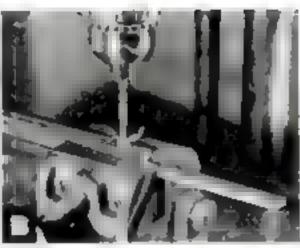

Here are the 26 steps in the construction of the engine.

Base and main bearings. Brass base plate, 4" thick, is cut out for two crankcase wells. Large holes, tapped 10-32, are for supporting columns; small holes, tapped 4-48, are for bearings. Main bearings are two pieces of 4" brass soldered together for machining, then unsoldered to form upper and lower sections.

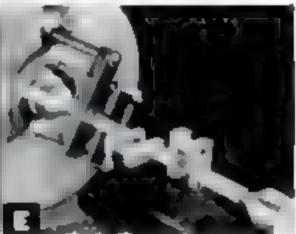

Crankshaft webs are cut from steel bar stock, 3/16" by %". Shaft holes are drilled 7/16" apart, using jig to assure uniform spacing. After drilling, the webs are cut off, stacked in a drill-press vise and reamed to make absolutely certain holes are spaced right. Ends of webs are machined later in the lathe.

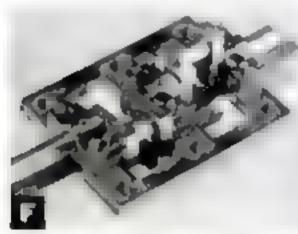

Crankpins and crankshaft ends are made from 5/16" drill rod. Turn both ends of the pins and the inner end of the shaft sections .002" oversize for a force fit in the 3/16" reamed holes in the webs. As no truing cut is made on the crankpin surfaces, the drill rod should be held in a collet or indicated true.

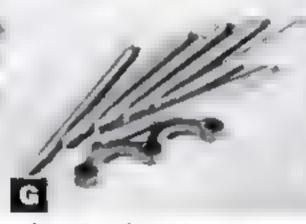

Web ends are finished and brought to dimension in the lathe. As each web is forced onto a shaft or erankpin section, it is chucked and turned to an 11/16" radius from the center of the far hole. It is not necessary to pin the force-fitted webs to the shaft, but driving pins in undersize holes is extra insurance.

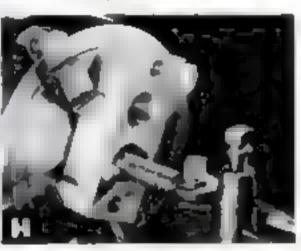

Completed erankshaft is act up between centers and tested for accurate alignment. Crankpus are set at 90°, giving shaft a smooth-running quality with four evenly spaced impulses to each revolution. This allows it to run without a flywheel, although performance is improved if one is used. Chances of stalling are also lessened.

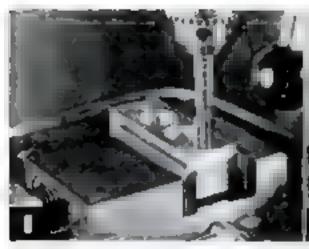

All set up. Prior to installing crankshaft, main bearings are aligned by slipping them on a straight piece of 5/16" drill rod and clamping in position. Holes are then drilled in base for mounting screws. All hexhead screws are turned from k" steel hexagon rod and threaded 4-48. Corners of hexheads are rounded and polished.

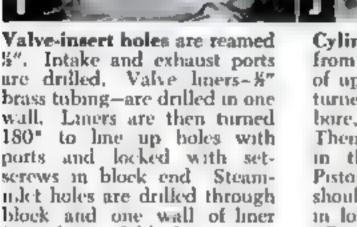

Crosshead-guide support, shown with columns, is cut from 3" brass plate. Three holes are drilled first, using the base as a spacing jig, and then layout of shape is made, using holes as reference points. Columns are 3" drill rod cut to length, shouldered for 3" at bottom, 3" at top and threaded 10-32 at both ends.

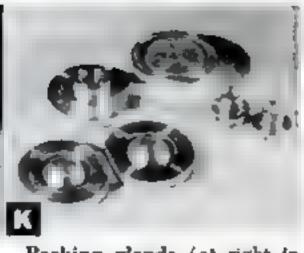

Cylinder block is solid chunk of brass or bronze. Lay out centers for cylinders and valve-insert holes and bore out 1"-dia. cylinders in lathe. Make final pass with a honed, round-nose boring bit fed slowly for maximum smoothness. Cylinder is lapped with Noxon silver polish after assembly, then washed and oiled.

Cylinder covers are turned from 14" brass rod. Inside face of upper and lower covers are turned to a snap fit in cylinder lkire, using cylinder as gauge. Then they are out off, reversed in the chuck and finished Piston-rod packing gland hole should be drilled and tapped in lower cover before cutting off.

Packing glands (at right in photo above), are turned from " brass rod and threaded to fit lower cylinder cover Gland is drilled and reamed 5/32" for piston rod and upper end of hole is counterborred for packing. Four 1/16" holes in flange are for adjusting pin to lighten flange on graphite

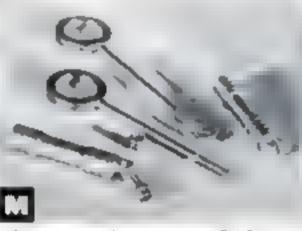

from front of block.

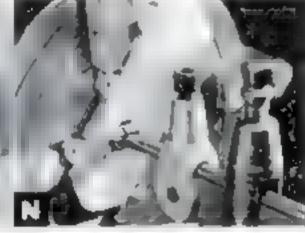

Valve eccentrice are made in two parts and joined by a single setserew. The body or bearjaw chuck, the cover plate proper inside diameter.

ing was turned in the threewith off-center collar, in fourjaw chuck. The codar is drilled in the lathe, then used as a jig to locate the hole in the body. Straps are thick-wall tubing of

Connecting rods, developed from lengths of steel bar stock, are made in successive stages. (O) The steel bar is centered in the four-paw chuck, centerdrilled at the free end, and supported by the tailstock center while the middle section is rough-turned. (P) The big end is then clamped in a vise, the rod heated almost white hot and the small end bent at right angles to the big end. (Q) When cool, it is set up in the lather again and turned to finished size. (R) The little end is then cut out and filed to shape and the big

Piston valves, turned from mild steel, should be perfect fit in valve liners. Oil grooves are cut with V-shaped cutter bit. Lower ends are slotted and drilled for adjusting eyes, which are threaded onto eccentric rod and held in proper adjustment by lock nuts. Rods are threaded into eccentric straps.

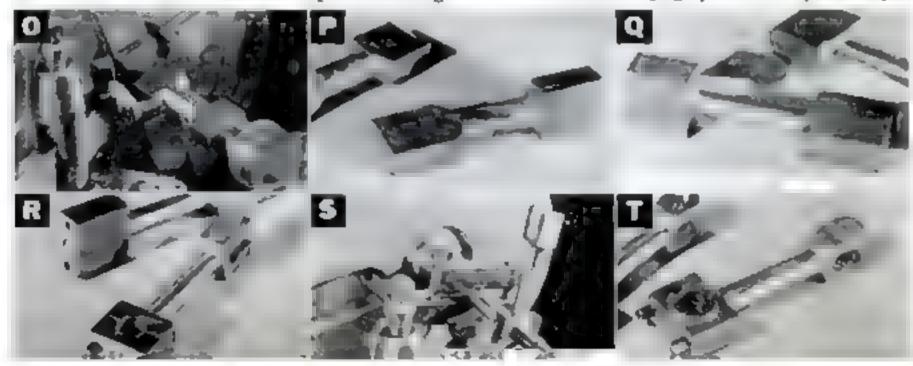

Cylinder-block support is cut from 3/16" brass plate. Holes for supporting columns must match those in base. Support is chucked in lathe and bored to receive the %" collars of the lower cylinder covers. Six No. 38 holes for the screws that join plate to underside of block are then drilled according to the layout.

end drilled for the two bearing-cap screws. The bearing cap is cut off the big end, the meeting surfaces smoothed, and then joined with the two cap serews.

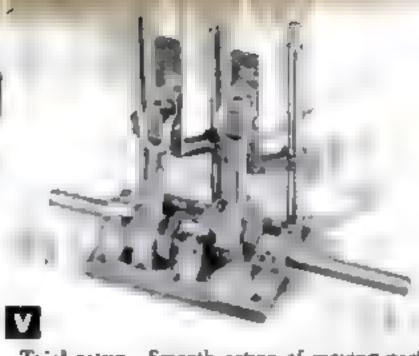

The crankpin hole is then drilled and reamed 5/16" (S) The big end is clamped on a mandrel and turned to shape, and the little end is drilled for a %" rivet that links it to the crosshead. (T) The finished con rod looks like this after machining.

Turn the page for the six final steps.

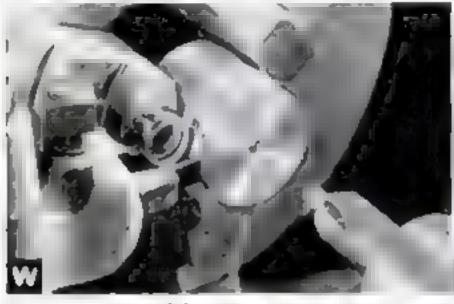

Crossheads are shaped from %" brass and a slipper of 1/16" brass is soldered on foot. Any error in the crosshead-guide support can be made up by altering the thickness of the slipper plate. The heads of two hex-head screws ride in slotted crosshead guide; setscrew and washer hold assembly together.

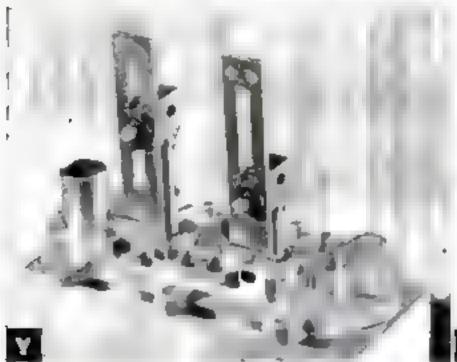

Trial setup. Smooth action of moving parts is checked by setting up lower half of engine and rotating grankshaft by hand. Crosshead-guide support should be placed in proper position on columns to check crosshead travel in slot. Upper ends of guides are later supported by bracket on upper assembly.

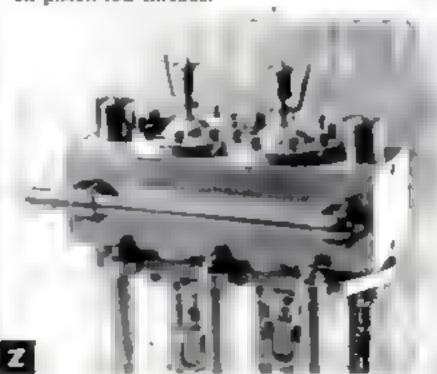

Pistons are turned from brass or dural rod to an easy fit in the cylinders. Parting tool is used to cut groove for piston ring. Center of piston is drilled and tapped for 6-32 thread on upper end of piston rod. Piston is then faced, cut off and reversed in the chuck for facing opposite end and bringing to dimension.

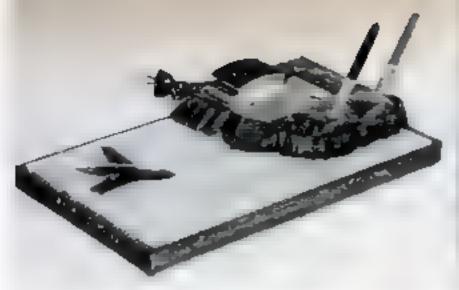

Cast-iron piston rings, of standard 1" size, are purchased commercially and fitted to pistons. Lower end of piston rod is threaded 6-32 to fit in crosshead. Lock nut is tightened against top side of piston after upper end of rod is threaded into center hole to prevent piston from working loose on piston-rod threads.

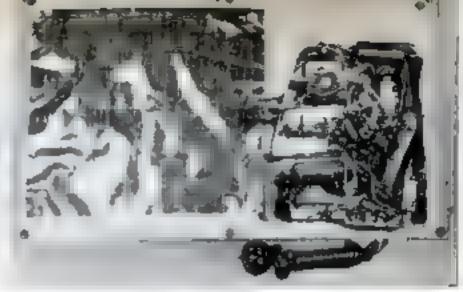

Upper assembly is tested for smooth action. Bracket for upper ends of crosshead guides is cut from brass angle. Setscrews holding washers on crossheads have shoulders turned to length that will bring washers up against slotted guide without forcing them tight. Setscrews join cylinder support to cylinder.

Petcocks on cylinder covers are dummes but could be drilled and used as gravity-feed oil cups. A displacement oiler should be fitted for model-boat use. Caps for vaive bners are drilled No. 50 to vent space above valves; they are turned to a snap fit. Intake manifold is %" tubing soldered into turned fittings.

Deak Set Gets Music. Turn the penholders of this desk set and a five-tube radio plays through a 2" oval speaker under the seaplane hangar. The opal-glass front of the hangar is the tuning dial.

Mahogany was used for the base, land area and large flying boat, the sea being

represented by oak plywood with the grain running diagonally. The hangar walls, penholders, small aircraft and parts of the big one are gold-plated brass. Built by Wing Comdr. J. R. Frizzle of the Royal Canadian Air Force, the 2x" by 9x" by 16" set has a loop antenna inside it.

Craftsmen Put Electricity to Work

Light Beam Steers Boat. A photocell slowly turning atop this 30" model cabin cruiser puts human fingers at its helm. Cruising at five miles an hour, it can be started, stopped and steered by triggering the photocell with spotlight flashes, Gilbert M. Turk of Paramus, N. J., used five miniature motors and a ratchet relay in the circuit. A single vacuum tube amplifies the photocell signal to work a 2-milliampere relay that operates stepping relay.

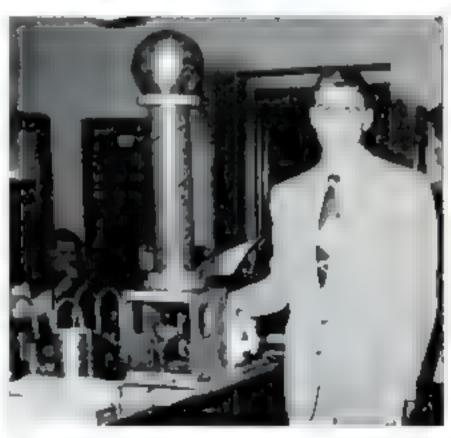

Ingeniously housed in an L-head flashlight case, this little receiver has an earphone where the lens and reflector used to be. A 2E32 tube, 1%-

and 22%-volt batteries and a simple circuit tuned to the strongest local station all fit into the barrel. Made by Richard D. Sklenar of Havana, the set plays with its antenna clip connected to a water pipe, hieyele, or other metallic object. The flashlight switch turns it on or off.

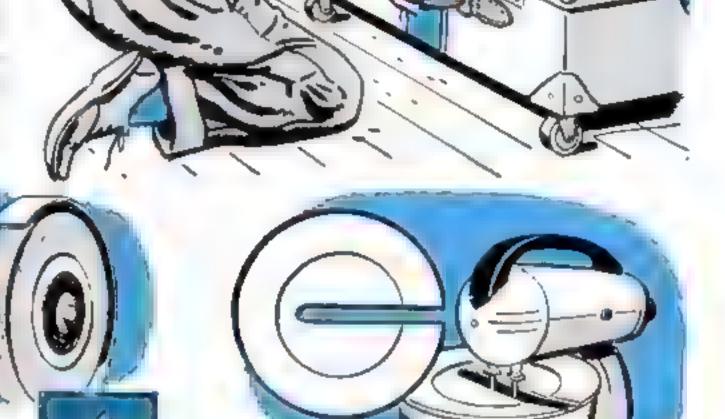

Sparks 6" Long snap about when this model Van de Graaff generator is driven by an ordinary electric motor. Robert Fox, a high-school senior, built it from plans in PSM (Oct. '46, p. 188). Entered in a science exhibition, it won him a recommendation for a college scholarship. The motor drives a silk belt running over pulleys in the base and in the sphere at the top.

KEEPING THE

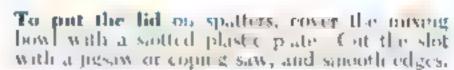

Home

SHIPSHAPE

A toy bin that r des out of sight beneath a bed will store room a toys now underford. Yet care take one casely by attaching this plate casters to an old softense.

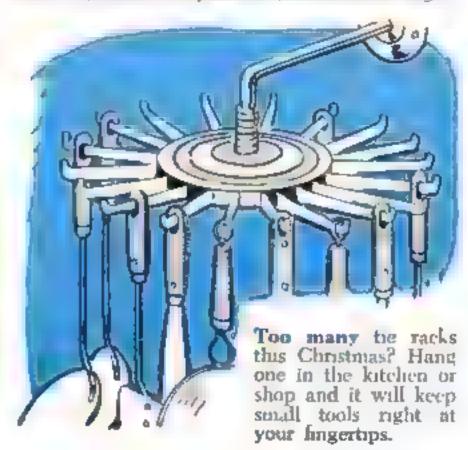

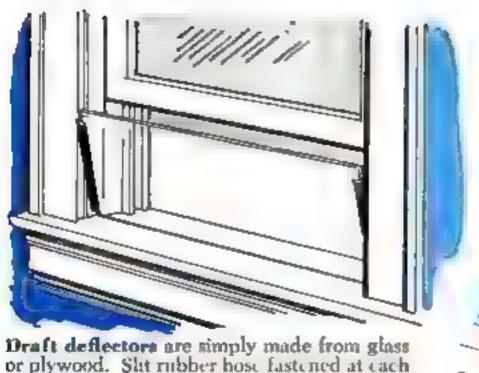

Shorp points on sharp knives mean loob a danger. If points are rarely used, grind down until they are rounded.

A fishing creet hung low on a closet door is a handy catchall for children's woolen mittens, caps and scarves.

Draft deflectors are simply made from glass or plywood. Shi rubber hose fastened at each end will keep the deflector firmly wedged between the window jambs.

When framing pictures, try driving in the brads with slip-jaw pliers. Open the jaws wide and, holding the nail in position with the other hand, apply firm, steady pressure.

A jumbo canister set for the cellar can be made from unused ash cans, cleaned up and painted. They'll safely hold rags and paper waste. A can with the bottom cut out and replaced with screening for ventilation will serve as hamper for basement laundry.

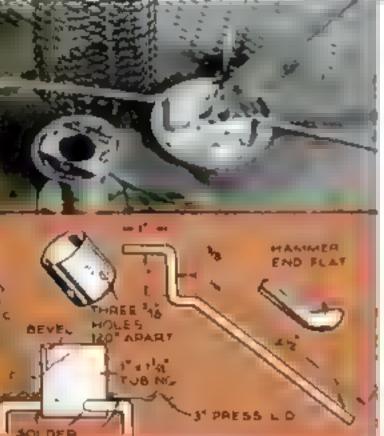

When the heat's on, floors shrink; so now is the time to fix gaps between boards. Clean out cracks and fill with a paste mixture of sawdust, shellae, whiting and color.

A punching-hag platform made from an old tire and tube is less noisy. Fix the tire to a wooden cross and mount it on the ceiling with enough bracing to prevent excessive vibration.

One Evening. Shop Projects

USE WAVY EDGE of metal lath for top of chimney. Close seam by soldering, wiring or hooking parts of one edge around the other. Solder legs together at the center and to the socket and can hid as shown below.

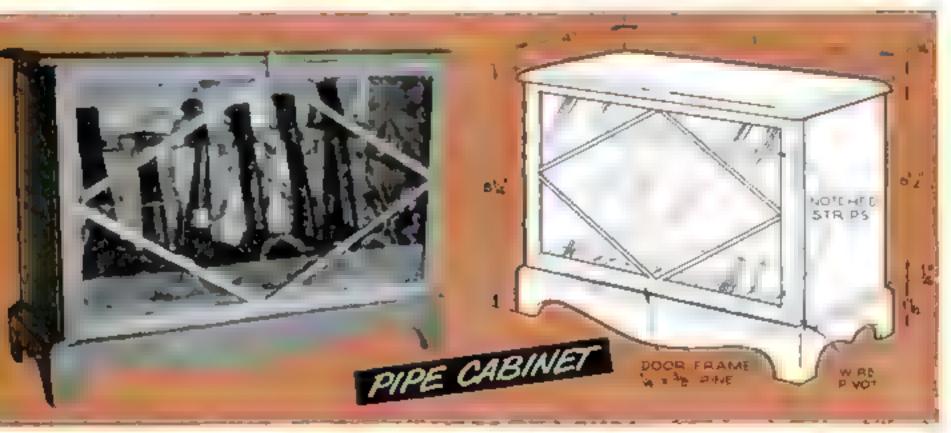

Screen chimneys put these hurricane lamps in tune with the trend toward wrought iron.

Bend three identical legs from 3/16" rod, hammering the ends flat to serve as feet. Cut a 1%" length of 1" tubing or conduit square and drill three holes near one end. File an inside bevel at the other.

Cut a 1" hole in the center of a paint-can lid, insert the legs in the holes in the tubing, shp on the can lid upside down, and solder the legs to both lid and tubing.

Cut a 9" by 9%" piece of expanded-metal lath with the longer dimension along the wavy finish edge of the sheet Roll the piece around a rolling pin or pipe, making the cylinder a close push fit on the flange of the can lid.

All parts should be finished by spraying with dull enamel or lacquer. As there are no large surfaces, even a fly sprayer can be used if the paint is well thinned.

Antique pipe racks that look like this one cost lots of money. But this copy was made of %" pine from an apple crate. The parts were assembled with small wire nails and glue and the interior covered with wall-

paper. The glass in the door is windowpane with wood strips glued to it. The cabinet was stained a light honey brown and brushed with a coat of clear lacquer.—John Rogers, Dallas.

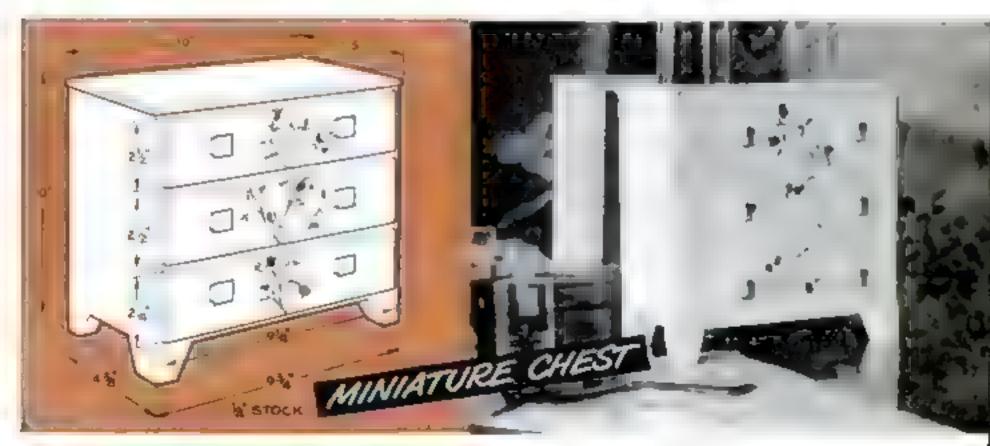

A nautical note was added to our living room when I built this fireplace set around a surplus Navy Danforth anchor. A length of channel was bent and welded to form the base and a metal pan was welded to the channel to make a bottom. Near the top of the shank, two arms of %" steel were welded to support the shovel, broom and poker.—

A. J. Kates, Pacific Palisades, Calif.

Soiled linen can be neatly collected in this kitchen or bathroom compartment. The photo at top shows the easiest way—a half-height plywood front nailed within a hinged-door compartment. The drawing shows a more convenient laundry catcher—a big drawer that can be pulled out for removing and sorting the clothes for washing.—Hi Subley, Nucco, Calif.

Jewelry, playing cards or cigarettes can be stowed in this 10" high, three-drawer chest. All the parts are birch, except the sides and bottoms of the drawers, which are plywood. The chest is glued and bradded together. After it was painted, the floral design was traced on with carbon paper and then painted in with a fine brush. You could also use decals for decorations.—Bertram Brownold, Cedarhurst, N.Y.

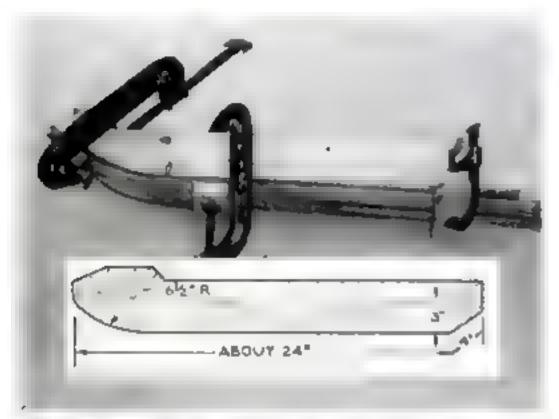

How to Restore Curve to Ski

Tips of wooden skis often tend to lose their curves after long service, making them dangerous to use. To reshape the tips, steam or boil the front 24" of each ski for 30 minutes or more. Then clamp it to a bending form until thoroughly dry. Store skis in a rack that will maintain the curve (right below). Before steaming, sand off all varnish so the steam can penetrate.—R. S. Wilkes, Keuka Park, N. Y.

STEAM ski tips until they can be safely bent. It may take up to an hour. Roasting pan on the stove (above) will do the job.

CLAMP steamed ski to a built-up bending form. Clamp the tip first and work back with other clamps. Use wood pads under clamps.

\$TORE skis as at right to retain curves. Garage wall is a good spot for rack. Adjustable dowel is raised to lock skis in place.

224 POPULAR SCIENCE

Coil Cools Iron Handle

DURING prolonged use, the handle of a soldering iron often becomes uncomfortably hot. A short length of 6- or 8-gauge copper wire wrapped around the body of the iron will radiate much of the unwanted heat before it reaches the handle.—

A. Trauffer, Council Bluffs, Iowa.

Money for Oil Left in Tank

WHEN no one is home at our house and a fuel-oil delivery is due, we leave the money in the oil tank. It goes into a simple little gammick I made by riveting the cap of a jar inside the oil-tank cap. After the money

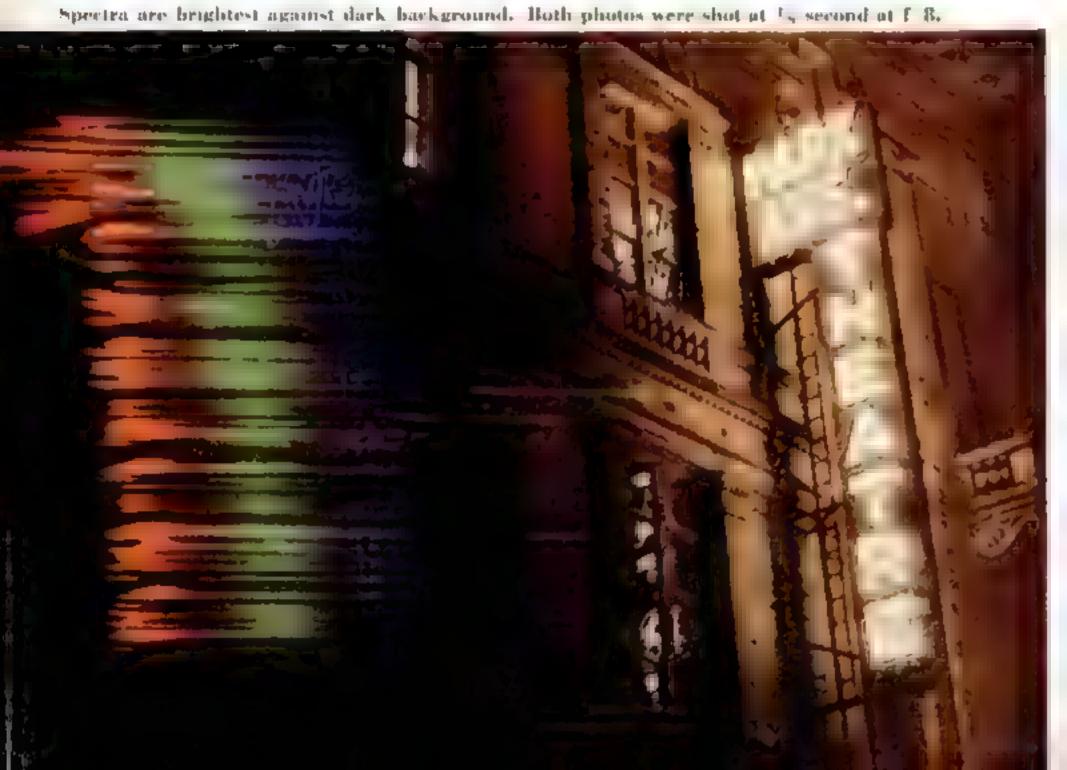

is stuffed in the jar, the jar is screwed to its cap and the tank cover replaced. The jar would also be a handy place to park an extra key to the house.—Edward C. Robare, North Adams, Mass.

Street signs photographed in color through a diffraction grating create starting effects.

You're invited to join the Air Force's new project for studying saucers by photographing them through a diffraction grating—a device that reveals the chemical composition of a source of light.

By Raiph Steiner

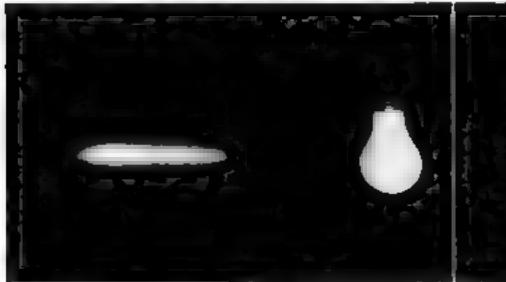

THE U.S. Air Force has set a new squad of 200 detectives on the trail of the flying-saucer mystery. These sleuths are photographers armed with cameras specially equipped to take pictures that may reveal the source of strange lights in the sky. Because similar equipment is available to anybody, you, too, can join the hunt

And even if you never get a chance to shoot a flying saucer, you can still have a lot of fun with a homemade version of the saucer camera with which the Air Force hopes to separate hoax and hallucination from scientific reality.

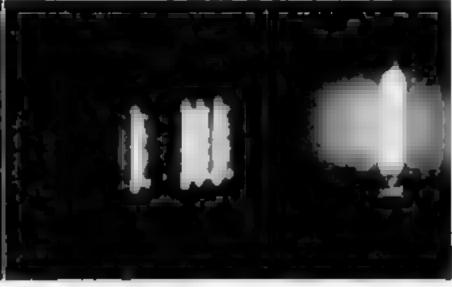

The camera the Air Force will use is the Videon Stereo with twin matched lenses of

35-mm, focal length and a maximum aperture of f/3.5. It takes standard 35-mm, film cartridges. A stereo camera was chosen, not because it takes stereoscopic pictures, but because it offers a convenient means of taking two pictures at the same time.

One lens will shoot a conventional picture. The other—and here we come to the gimmick the Air Force is pinning its hopes on—will be covered by a diffraction grating. This is a glass or plastic plate ruled with extremely fine lines—as many as 15,000 to the inch—scratched on the surface with a chamond point. The original grating is created on a special "ruling machine"—an instrument so sensitive that the heat of an approaching human body can upset its accuracy. Reasonably priced replicas are

A SOUD LIGHT SOURCE like this mazda bulb projects a continuous spectrum through a grating. Red end of spectrum is most intense.

A GASEOUS LIGHT SOURCE—a mercury-vapor sun lamp—produces a discontinuous or broken spectrum, mostly violet, blue and green.

1 TO MAKE YOUR OWN grating holder, ent a cardboard strip a hit wider than lens projection. Coat both sides with rubber cement.

2 WIND STRIP around the front of the lens, loosely at first, then tighter, to form ring is inch thick. Fasten end with Scotch tape.

3 CUT HOLES the size of your lens out of cardboard square slightly larger than grating. Tupe ring to card with gummed paper strips.

made by using this costly original as a mold.

Like a prism, a diffraction grating breaks up light into its component colors. The fine slits in the grating bend the light rays as they pass through—separating them into bands that range from the violet end of the spectrum through the blue, green, yellow and orange sections to the red end of the spectrum. The way in which these bands are projected onto the film reveals the nature of the light source.

Light Source May Be Solid or Gaseous

For example, the light from a mazda bulb produces an unbroken or continuous spectrum, indicating a solid light source—the heated tungsten wire. On the other hand, a fluorescent tube projects a number of separated bands of light—a discontinuous spectrum—indicating a gaseous light source.

It is not necessary to use color film. The Air Force itself is using black and white. It is the arrangement and intensity of the light bands on the film that provide the information the scientists want.

Suppose you send the Air Force two saucer pictures photographed through a diffraction grating. The first shows a continuous spectrum of greatest intensity at the red end, the second a discontinuous spectrum most intense in the area which would be green on color film.

The trained analyst will interpret the light source in the first photo as a solid (continuous spectrum) of relatively low temperature (greatest intensity in red area) and conclude that your first saucer is probably a reflection of a mazda light source on the ground—a car headlight perhaps. Your second photo, indicating gaseous matter at high heat as the light source, will most likely be set down as a meteor—the well known "green fireball" saucer.

Of course if the Air Force discovers that your negative indicates the existence of an element not found on this planet, you and your camera will go down in history.

Diffraction Gratings Have Other Uses

Like the photographic technician, astronomers, criminologists and industrial scientists use diffraction gratings to analyze unknown materials. The astronomer shoots a new star through a grating to discover its composition. The FBI agent puts a bit of the dead man's cuff in the crater of an arc light and studies its spectrum

You don't need a Videon Stereo camera to

77% POPULAR SCIENCE

join the saucer hunt. Any stereo camera will do. In fact, when I phoned the Pentagon to inquire whether the Air Force would be interested in photos taken with single-lens cameras, I was assured that any shot of a flying saucer made through a diffraction grating—even with a box Brownie—would be more than welcome.

You can get replica gratings from the Central Scientific Co., 441 Chnton Avenue, Newark, N. J. For a small lens with front opening no greater than 20 mm., order their grating number 86705, with a ruled area 20 mm. by 22 mm. on a two-inch-square glass. It costs \$3.53. For larger lenses, they have grating number 86706, with a ruled area of 60 mm. by 70 mm. on a 82-mm. by 100-mm. glass, for \$12.83. The pictures show you how to mount your grating.

A few general suggestions. First off, remember a flying saucer won't wait. Have your camera loaded and ready, tripod-mounted if possible, focused at infinity. Use panchromatic film. The highest shutter speed consistent with good exposure will help freeze your saucer.

Experiment to Get Exposure

The problem of what exposure to use is tricky. It is impossible to give a general prescription suitable for both a dark object in a cloudy sky and a shining fireball at night. Perhaps the best idea is to experiment with such readily available light sources as the moon, Venus, neon lights, sodium arcs, incandescent and fluorescent lamps. (Just for fun, try a few color shots.)

In daylight hours, set your camera for prevailing weather conditions. At night the lens should be wide open and the shutter at 1/25 second. If your saucer is brilliant, you can stop down your lens and speed up your shutter in a hurry.

It will help the Air Force to determine the size and elevation of the saucer if you can manage to include a landmark such as a tree, house or telegraph pole in the picture. After shooting, mark the spot where you stood, or measure it off in two directions and write down the measurements.

Don't develop the film. Make a note of the lens and shutter speed, describe the conditions under which you shot the picture and mail this data and film to:

Air Technical Intelligence Center Wright-Patterson Air Force Base, Ohio Attention: Unidentified Aerial Objects Investigation.

4 CENTER THE GRATING face up on flat side of card over hole. Trace around glass and cut card to size. Cut second card just like first.

5 NOW BIND GRATING between the two cards with Scotch tape. When grating is on camera, only plain glass is presented to weather.

6 MOUNT GRATING with lines running up and down. Um so the subject is offset near side of field, to avoid cutting off the spectrum.

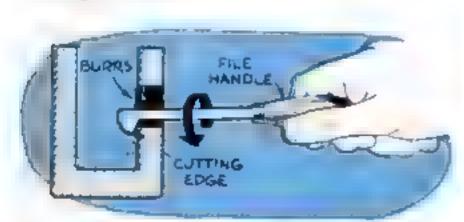

Shop description

Lathe Cuts Keyways. Long keyways, often longer than could be cut with a miling attachment or small miling machine, can be cut in any lathe having powered carriage feed

The shaft is mounted between a ball-bearing

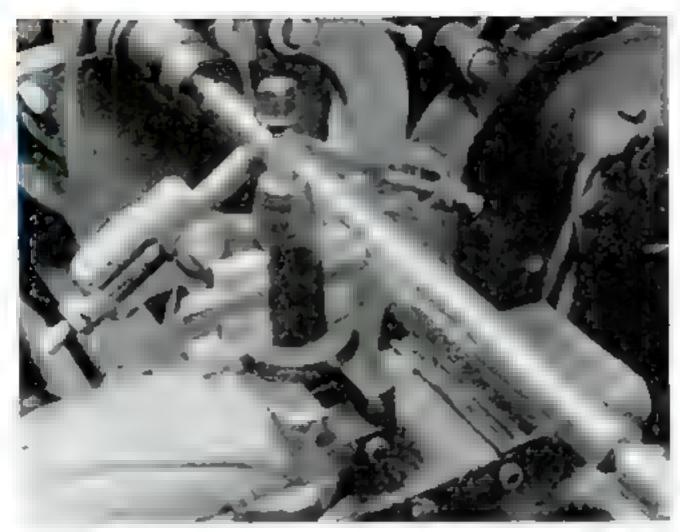

center in the headstock and a solid center in the tailstock. A steady rest is clamped tightly on the shaft to prevent it from turning while the back gears drive the carriage along the bed ways. A cutter bit, ground to the exact width of the desired keyway, is

How to Check Shaper Table. To test the accuracy of a shaper or miling-machine table, set up a fairly long piece of bar stock on parallels and make a surfacing cut along its length. Then remove the work piece, turn it end for end and remount it on the parallels. Set up a dial indicator on the tool holder or miling arbor and pass it over the piece to determine the runout.—F. Strasser, Santiago, Chile.

Tool Removes Inside Burrs. When you drill through tubing or across grooves, burrs often build up on the inside surfaces where they cannot be reached with ordinary tools.

This tool, which you can grind from a narrow file or an old boring tool, will reach inside to get the burrs off. The hooked end of the tool is inserted, pulled back and turned.—W. Walkinshaw, Whittier, Calif.

clamped on its side in the tool post, level with the center of the shaft.

Take light cuts at medium feed with your hand on the lead-screw engaging lever, releasing it if the tool hogs in to avoid straining the lead screw.—Will Thomas, Buffalo.

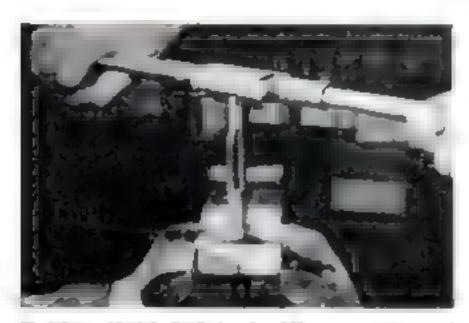

Steel Wedges Mike Grooves. A pair of ground steel wedges will deliver the width dimension of a piston groove out to where the micrometer can read it. The tapered faces of the wedges are slid against each other in the piston groove until they stop. An accurate reading of groove width can then be taken off the parallel outer faces of the wedges.—F. McGuckin, Ridgewood, N.J.

Spinner Aids Quill.
A steering-wheel spinner knob, obtainable at any auto-supply store, helps in drilling deep holes in the drill press. It is especially handy on drills having a single feed handle as the swivel action of the knob makes it

unnecessary to change the position of your hand as you force the drill down into the work.—Victor H. Lamoy, Upper Jay, N. Y.

Tubing Held Safely in Vise. A piece of scrap wood drilled and slotted through the hole will make a crude collet to hold light tubing between the jaws of the vise without crushing it.

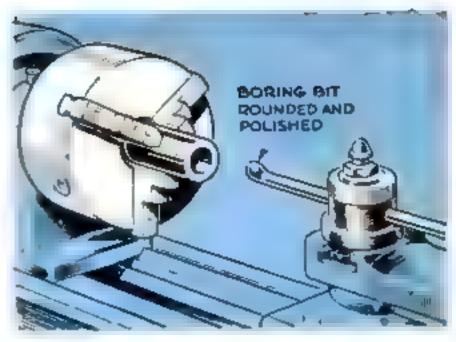

The hole should be the same size as the tubing to be held.

Socket Chucks Nuts.

A 12-point socket from a mechanic's wrench set can save plenty of elbow twisting when making up nuts from hex rod.

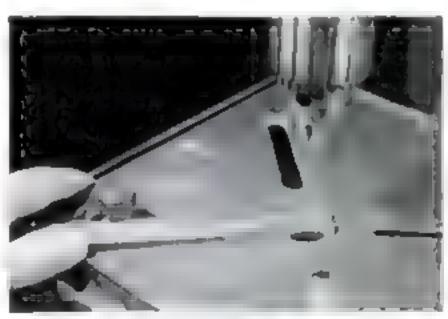

The rod is first drilled to tapping size and the blanks cut off in the quantities required. Then the socket is chucked in the lathe and the nuts slipped quickly into it for tapping. The tailstock is pushed along the bed by hand to bring the tap up to the nut and pressure is maintained until the tap cuts the full thread. Then the lathe is reversed to allow the threaded nut to push the tap and tailstock back out. The finished nut is removed and the next blank inserted as the lathe is stopped and started forward again.—R. Carlson, Vancouver, B.C.

Burnish Bushings for Longer Life. To reduce running-in time and make bearings last longer, try burnishing them when you bore them out.

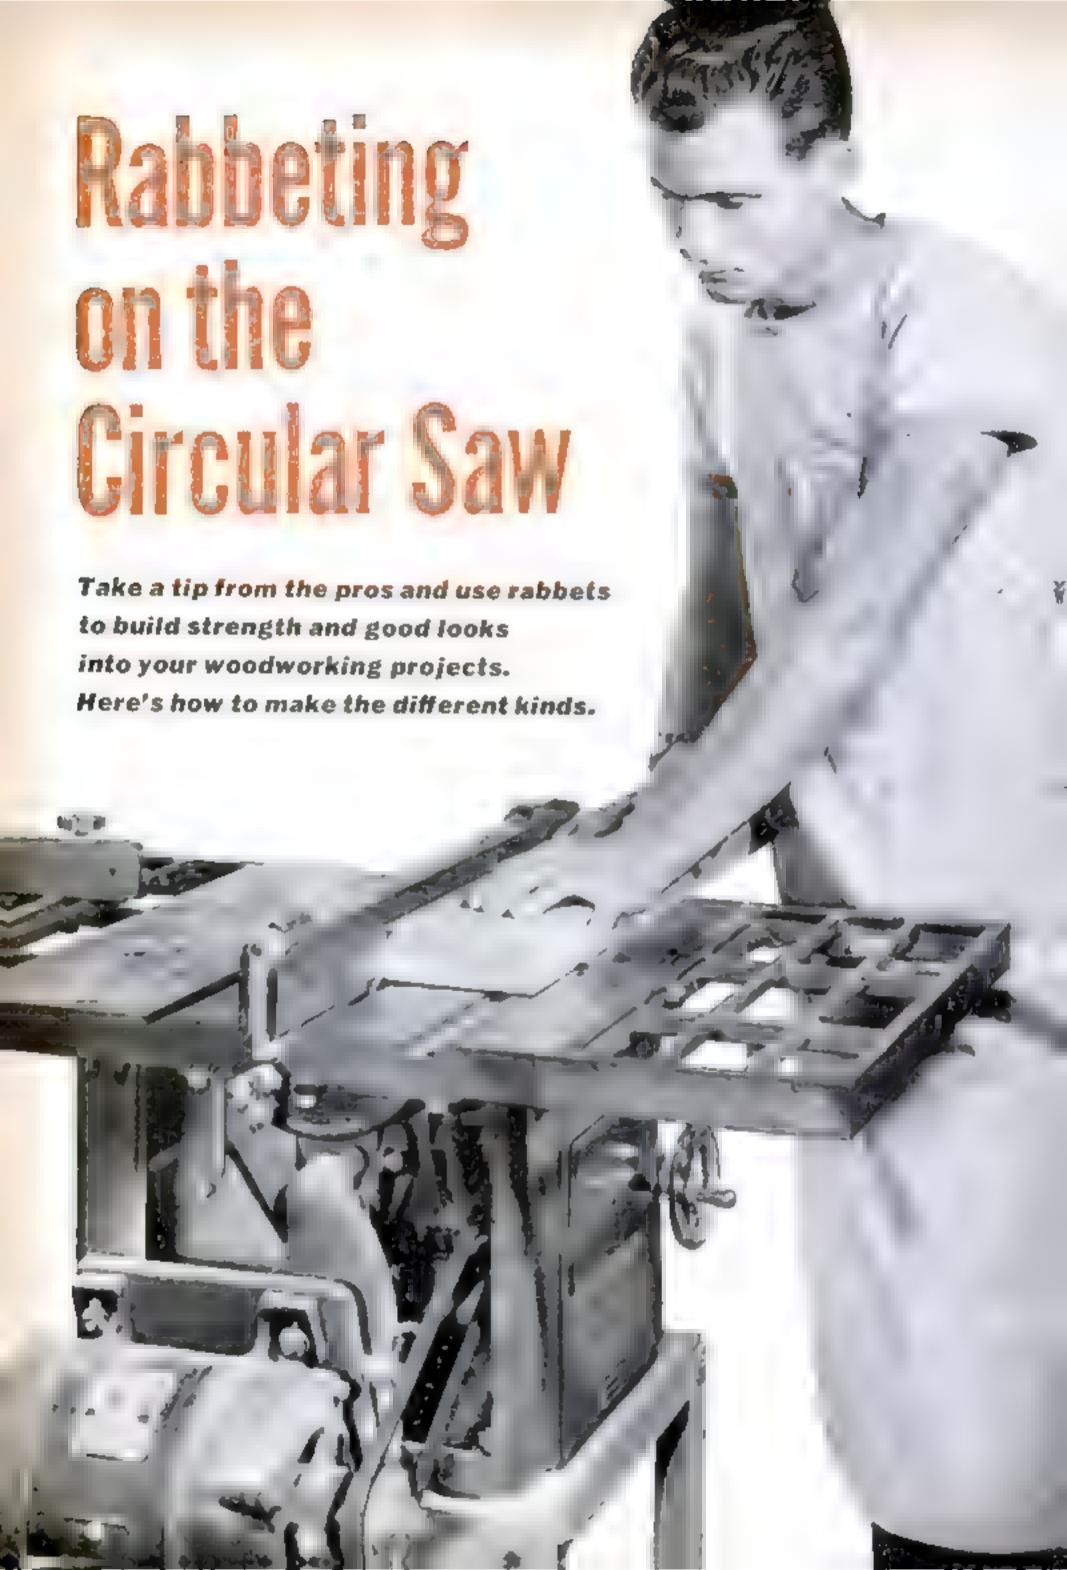

immediately after the finishing cut, and using the same feed but a slightly slower speed, run a carefully rounded and polished boring-bar tool bit through the bore. Moderate pressure of the polished tool bit burnishes the bushing, leaving a smooth, highly polished, work-hardened surface that will hold its fit long after other bushings have become sloppy.

Very small bearings can be burnished by running a piece of hardwood with a ball-shaped end through the bore by hand at low speed. The hardwood ball should be a tight fit in the bore.—Fred F. Davis, Edmonton, Alberta.

Bolt Adds Safety to Drill Press. A large bolt inserted in a slot in the drill-press table may save you the frightening experience of having a job spun right out of your hand as the drill bites into the metal.

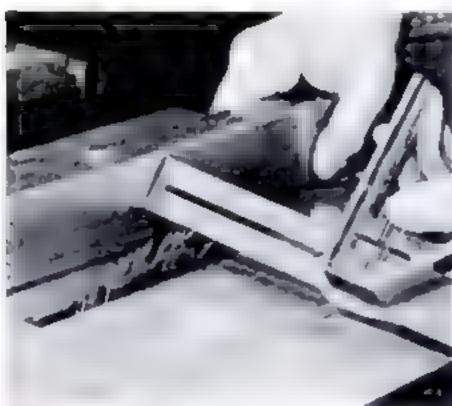

The bolthead prevents the piece from riding up and over while the shank, slightly smaller than the width of the slot, holds the work against the twisting action of the drill. No nut is needed and the bolt can be quickly removed when not in use.

By Edwin M. Love

A RABBET is a step cut into a board. It is one of the best ways of connecting wood to wood or to other material. In a joint, it brings six surfaces together for gluing instead of the butt joint's two. For house siding, it makes a weatherproof as well as decorative joint. In sash frames, it receives the glass. In cabinetwork it is indispensable for concealing corner joints and for all-around strong construction.

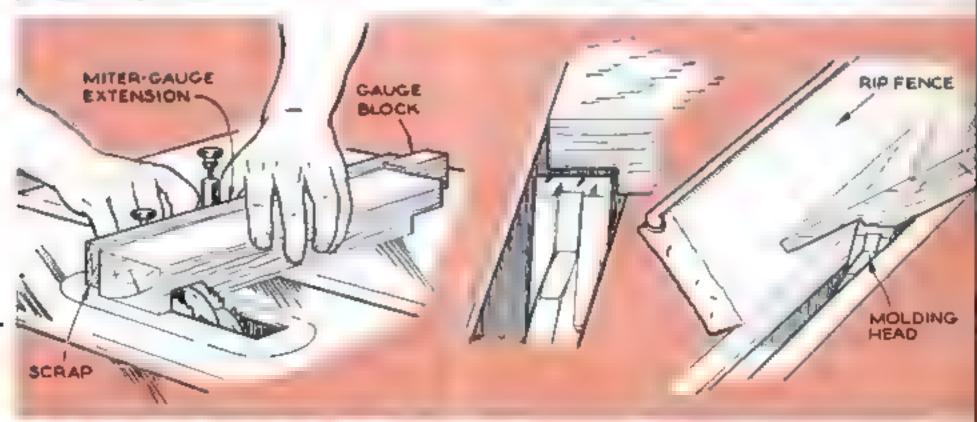

You can cut rabbets with your circular saw just as it is—just make a double cut to remove a rectangular strip from the edge of a board. A dado head or set of wobble washers, though, will cut a rabbet in one pass. Either also guarantees a sharp inside corner, not always obtained with the ordinary saw blade, which requires the depth of cut and rip fence to be set precisely to avoid undercutting the corner on the second pass. The following photos give further dope on the care and feeding of rabbets.

Combination blade is all you really need to cut rabbets on your circular saw: two passes over the blade do the job. The trick is adjusting the tence and blade height to the depth of the rabbet. Only if these adjustments are correct will you get a crosp corner.

Dado head can cut a rabbet of standard width in one pass. Bolt an auxiliary fence to the rip fence and cut into it so that only the required width of the dado blades projects. Wide rabbets are cut by making several passes over the fully exposed dado head.

Cross-grain rabbets are best cut by backing up the work with scrap wood to prevent blade from tearing wood at end of cut. For repeat operations screw a gauge block to the wooden mitergauge extension to locate pieces of same length for rabbetin;

Molding head with square cutters cuts smoothbottomed, clean rabbets. It is used like a dado head At right, molding head bevels a siding board already rabbeted. Arbor or table is tilted and trial cuts made to locate fence.

Please turn the page.

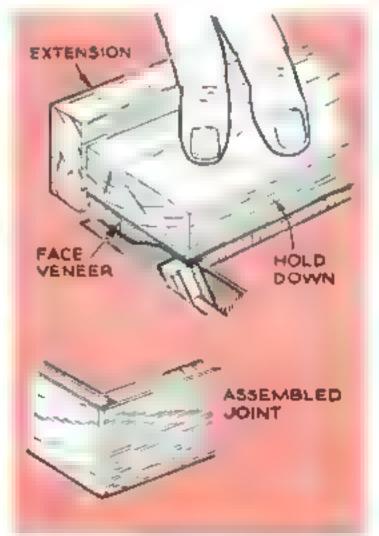

Blind rabbets are closed at one or both ends. Work is lowered onto blade and advanced until it meets stop changed to fence. Round ends of cut are been enusued out square.

Outside curves are rabbeted with dado or molding head by running edge against fence, Center of cutter is marked on fence and radius lines on work are abgried with it successively.

234 POPULAR SCIENCE

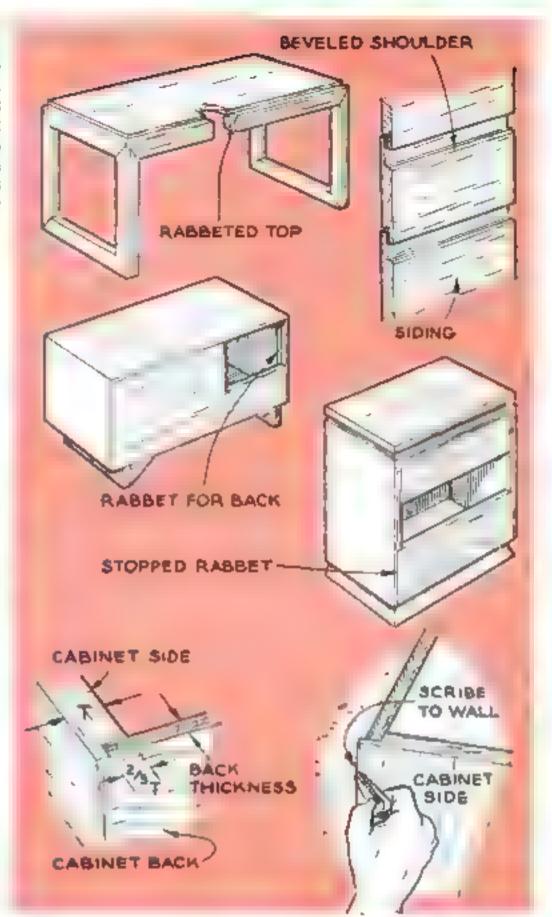

Box or cubinet corners, if constructed of veneer panels, can be almost completely concealed by rabbeting right up to the face veneer. Use a block over the panel while cutting to prevent the veneer from lifting off. After assembly trim off the projecting edge and round the corner. This type of corner should be glued.

Most common rabbets. Frame of coffee table at right is rabbeted to receive table top. Siding takes full advantage of rabbets to form weatherproof joint. At center are two methods of fitting backs into cabinets with rabbets. Note that rabbet is usually cut about two-thirds into the thickness of the wood. When cabinet is to fit against a wall, rabbet is cut extra deep and projecting edge shaped to fit contour of wall (bottom). Cut extra deep if wall is irregular.

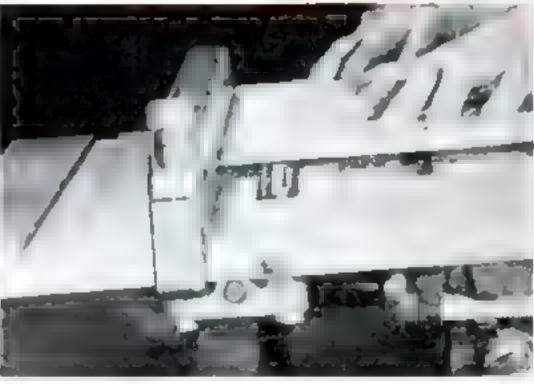

Raised panels such as those used in traditional furniture are among the many decorative uses of rabbets. Saw all around the piece on both sides with the blade set at an angle to bring out a slight taper.

Panel is finished by trimming original cuts with blade set carefully to proper depth. Sand off slight unevenness where blade crossed last cut made Also sand corners of raised surface

Dado or molding head can be used to cut raised panel. Work is done entirely from face of piece. Tilt arbor for slight taper and cut shoulders first. Then shift fence and raise cutter to continue the taper to the edge of the work. Sand off slight difference between two cuts.

BEFORE

left was broken up by sliding wardrobe pauels and other doors that prevented using wall decorations. At right, structed-plywood tiles on sliding panels liven up hall without

affecting use of doors.

Plywood Tiles Dress Up Dull Walls

Cut or bought in varied shapes, they make handsome designs that you just glue on.

OUR entrance hall was so dult that we considered letting the neighborhood kids draw on the walls to help liven it up. It consisted mostly of doors, especially two large sliding wardrobe panels—and you can't hang pictures on doors. Slapping on some bright paint would simply substitute garishness for duliness.

PLYWOOD TILES are glued on a row at a time and held in place during drying by small, countersunk brads. Tiles must be started square, kept tightly butted for a good fit.

Then we hit on the idea of covering the shding wardrobe doors with striated-ply-wood tiles. These are easy to put on and provide a handsome design that relieves the monotony of the other areas.

Make them or buy them. You can save money by cutting the tiles yourself out of 4' by 8' sheets of 5/16" Weldtex. But sawing them into accurate, uniform shapes and sanding the edges to a neat bevel take time and work.

You can trade a little more money for the luxury of laziness by using ready-made Striatile*, as I did. These are precut tiles that come with either straight or diagonal striations in a variety of sizes and shapes—4" by 8" and 2" by 12" rectangles, 4", 6" and 8" squares, 4", 6" and 8" hexagons—at an average cost of about 18 cents a tile.

Choosing a pattern. I decided on the 4" by 8" tiles laid in rows, but there's no limit to the designs you can work out. Using square tiles and alternating the direc-

^{*#} ooderaft by Armand, 314 North Lafayette St., Allentown, Pa.

tion of the striations produces a checkerboard pattern. The diagonally striated ones will create a herringbone effect. The hexagons form a novel mosaic.

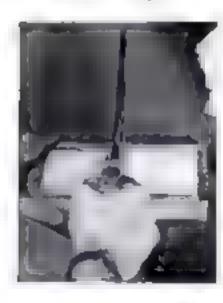

Doors aren't the only candidates, either. A small number of tiles will do a lot to brighten up a dull bed headboard, a plain desk or even a wastebasket. A few more will dress up the wall over the fireplace. Another trick, if you have a wall with bookshelves or other built-ins on it, is to cover only the areas around them. This will save a lot of tiles yet give the appearance of a paneled wall.

Mounting the tiles. Since I wanted the tiles laid with staggered joints like courses of brick, this called for half tiles at the ends of every other row. To cut them quickly and accurately, I rigged up a shallow, three-sided box just big enough to hold one full tile and sawed down the sides at the middle to provide guide slots. Then all I had to do was drop in a tile, make a couple of passes with the saw, and out came two neat half tiles.

Next I removed the doors and laid them flat. Starting at one end, I spread on a narrow strip of glue and put down a row of tiles, then a second strip of glue and another row of tiles, and so on until the job was complete. Small, countersunk brads hold the tiles in place and are easily concealed by the striations in the wood.

Fitting odd sizes. Patterns that don't come out exactly even at the edges should be centered so that the fractional tiles are the same size on both sides. Starting at the top of a door or wall will also make any odd-size tiles come at the bottom where they'll be less conspicuous.

We finished our tiles with two coats of water-white lacquer, which turned them to warm golden color. You could also paint them, but the natural finish is so handsome that I'll bet you won't want to.—Paul Corey, Sonoma, Calif.

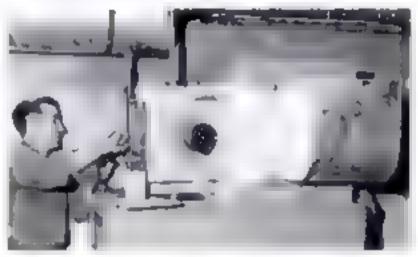

HALF TILES, needed to fill out ends of staggered pattern, are accurately sawed in shallow, three-sided mater box that holds one full tile and cuts it neatly into two uniform halves. Rough edges are then smoothed with sanding block, stroked gently at first to avoid breaking off the ridges.

Heat Ducts Are Flexible

GLASS-FIBER ducts make it easy to install modern warm-air heating in older homes. Only two small wall openings are needed—one at the baseboard level and the other 6' above. The flexible tube is fed collapsed into the upper wall opening until it reaches the bottom opening. Inside the wall, the duct snaps back to shape to fill the stud space. Metal grilles are then placed over the openings. This method eliminates tearing out lath and plaster to install metal ducts. The units are part of a heating system made by Coleman Co., 248 N. St. Francis St., Wichita, Kan.

Water Heated by Hot Air

The same hot air that heats your home also heats your hot water when this unit is used. A blower moves heated air over a finned copper coil that carries the water. In the summer, a damper stops hot air from moving upstairs. A 40-gallon water-storage tank is recommended for one-family homes. With a larger tank, some of the hot water can be piped to a hot-water radiator in a sun porch or garage. Made by Aqua-Air Corp., Elmont, N.Y., the unit can be mounted on any hot-air furnace.

X New Tools

1 Tool Closes Flooring Joints. Drive the toothed end of this tool into the subflooring as above, and it serves as a lever to close a joint in tongue-and-groove flooring. A hinged and pointed arm, trailing after, holds the pressure applied while the loose board is being nailed.

2 Removes Paint from Roller. To aid in cleaning a paint roller, the little scraper above takes off excess paint. Its slightly offset rolled edge will not cut the wool cover of the roller, and keeps the paint from splashing

3 Parts Rack. Jars for nails, screws and other small parts simply snap in and out of the metal clips on this rack. There are no screw caps to remove. The racks come in two sizes for five- or eight-ounce baby-food jars.

4 Sanding Block is Rubber. Sheets of 2%" by 9" paper can be inserted individually or in stacks in the all-rubber block above. The block is solvent-resistant so that it can be used for wet sanding. It is designed to fit the hand and is suitable for fine or heavy sanding.

5 Drill Press Has Tilting Table. The sanding table of a new drill stand tilts to 45° and adjusts up or down. The stand, made for a %" drill, frees both of the user's hands for sanding, buffing, grinding or wire brushing. Another model includes only stand and clamp.

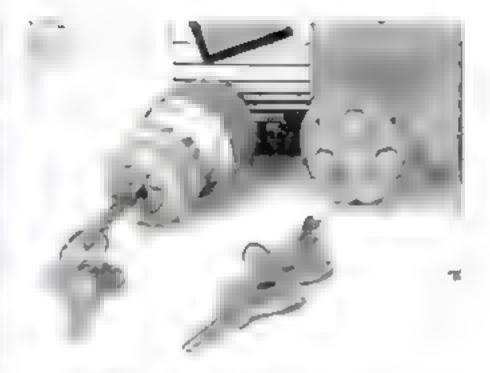

Finishing Sander. The platen of this sander oscillates 4,250 times a minute. Diameter of the orbit is 3, 16", permitting the tool to be used in any direction on wood without showing swirl marks. The sanding surface—3%" by 9"—extends beyond the body, making sanding in close quarters easier. For convenient operation, the knob handle can be placed on either side or at the front of the machine.

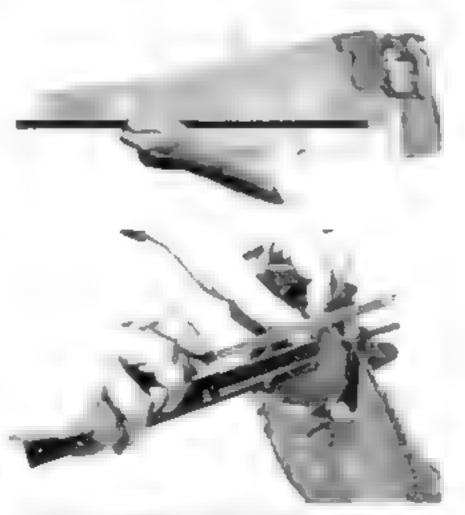

Protects Saw's Cutting Edge. When a saw is not in use, a snug-fitting protector of vinyl plastic will keep its teeth rustfree and sharp. Easy to slip off and replace, it comes in lengths to fit saws of popular standard sizes. The inexpensive guard is said to be unharmed by oil, gasoline or sunlight.

Sharpens Hollow Chisels. This sharpener is chucked in a brace and the mortising chisel to be sharpened is locked in a vise. A few turns of the brace and the highspeed-steel sharpener puts a keen edge on the chisel. A file is used to remove burns and finish the corners.

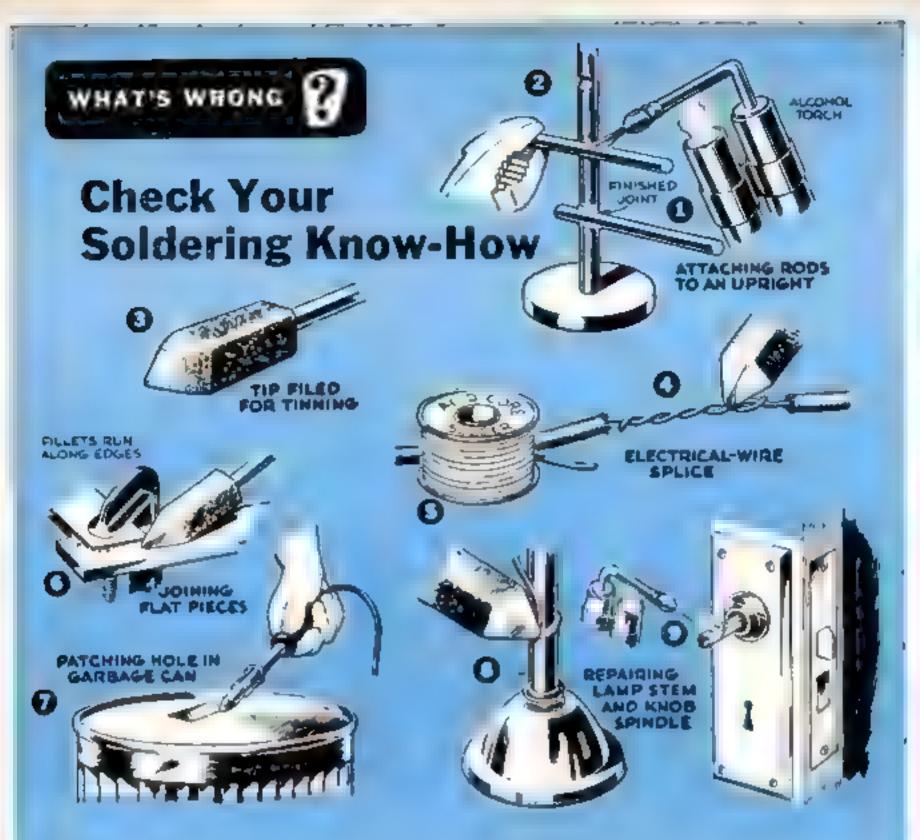

7 Switch Locks Power Tools. With one of these switches on a power tool, no one can use the tool unless he has the key. The danger of children fooling with a tool is removed. When the key is turned left, it lights the lamp; turned right, both lamp and motor operate. Removal of the key locks both lamp and motor. The switch can be used on other equipment such as boats, farm equipment, washing machines.

On the guide arm and file holder make it easy to sharpen circular blades with a new tool. The correct angle and rake are set by adjusting the guides. The tool clamps to a workbench. A triangular file and four mandrels are included.

Further information on these tools may be obtained from I Consolidated Products Winsted Conn., 2 Brush Save, Inc., 10-19 W. Loomis Rd., Milwinker I., 3. Fully, Box 1513, Merchandise Mart, Chicago 54; 4 Behr Honning Curp., Tros., N. Y.; 5. Arrow Metal Products Co. 140 F. Broadway NIC 13; 6. The Black & Decker Life, Co. Townson 4. Md., 7 Irring S. Miller, 1012 F. aliace for , NIC 6°, 5 The Over Products Co., 2nd St. S. W., Centen 1, Ohio; 9. Woodworkers' Tool Forks, 272 5. Inferior St., Chicago 6, 10. Speed Curp., 517 N. E. Tinl five., Pariland Ore.

COFT solder has a thousand uses, but sometimes a job is unusually difficult to do or disappointing when finished. Failure to clean the metal thoroughly, removing dirt and oxide film is the most

cormon mistake and can result in a botched joint. The drawings above show nine other errors, and if you can spot them all you're probably a first-class soldering mechanic vourself

ANSWERS

 The finished joint will fall apart as heat is conducted to it from the second one Either clamp the first or wrap it with a wet

2. Held with pliers, the work may move during cooling crystall zing the solder and making a wax joint. Clamp or wire the parts together

3. The top should be filed the full length of the bevel. As shown, it can be tinned only at the point and will be useless except for very small work

4. A loosely twisted joint like this depends upon the solder for strength. A good splice is so tightly twisted that it will be strong without solder

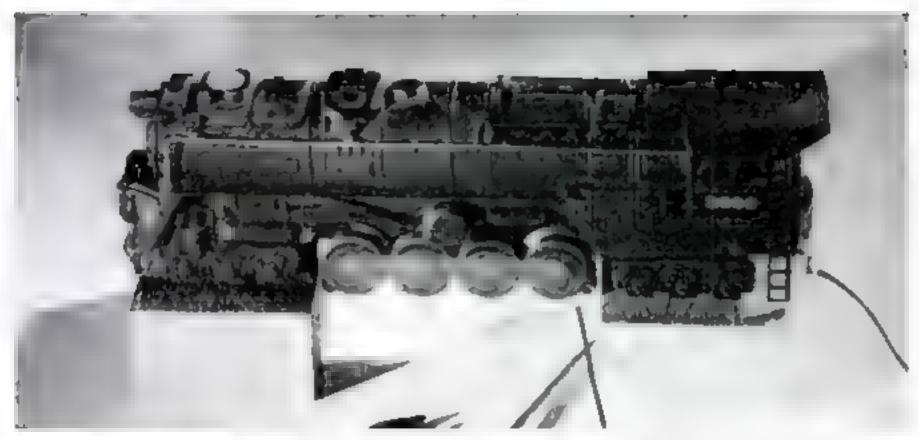

Ac d first should not be used for doing electrical work, as it corrodes joints unless it is washed off. Rosin is the right flux for such Jobs

6. Fillets make only a tack joint. For maxmoun strength, tin both surfaces first (cost with a thin film of solder). Then sweat them together by lacating while the funed surfaces are held together

7 The soldering non-shown as hapelessly small for the job. Heat will be conducted so rapidly that there will not be enough to melt the solder freely and bond it to the metal

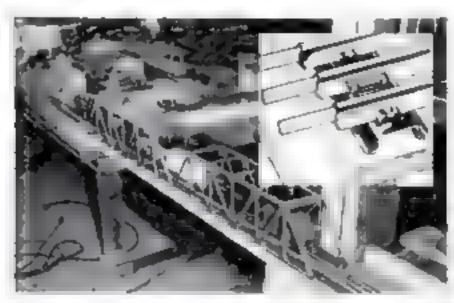

8. A mere bead of solder will give way. But a split sleeve, tinned inside and sweatso dered (cross the break will probably make the lamp standard as strong as new

Solder will not hold on such stressed joints. The spindle will break again at the first turn. A new one is the answer

4 Hints for Model Railroaders

Opening Up Clogged Smoke Unit. Running light, a locomotive's smoke unit often does not get hot enough to keep the smoke chemical fluid. This causes it to crystallize

Lift-Out Bridge Clears Busy Path. The route to the washing machine must never be obstructed—not even by a radroad. A pair of truss bridges screwed end to end on a straight piece of shelving board make one long bridge that can be quickly lifted out of the way when the evening's operation is over. Strips of thin brass or pieces broken from a razor blade are forced into the track sections adjacent to the bridge and soldered in place. The bridge track is forced down on these projecting strips to complete the circuit. This eliminates foreing whole sections of track back to insert track pins. A small wood block screwed to the table ends will support the bridge.

around the tiny vent hole over the puffing piston, eventually elogging it.

The remedy is to apply full voltage to the loco while it stands in the neutral position to 'cook" the smoke material into a completely fluid state. Then flip the lever and run the loco at high speed to blow out the vent hole. The bench setup (above) is a good way of doing the job. Hook up one transformer wire to the current collector, the other to the frame.

Candy-Box Separators Make Roofing. Embossed-cardboard separators found between layers of chocolates make ideal roofs for water towers, sheds and stations. They are usually dark brown and need no paint.

Streamliners Use 027 Switches. You can use 027 timplate switches in an O-gauge layout if you cut away part of the plastic solenoid housing to clear the overhang of longer ears. The opening that is left after cutting away the housing can be covered with small pieces of thin black fiber. Altered in this way, the switches will accommodate O-gauge Diesels and long streamlined scale-type passenger ears.

New Harpoon Electrocutes Whale [Continued from page 150]

hours on the factory ships, averaging only four hours' sleep a day for a season which lasts two months or more.

The quarters on the catcher boats are unbelievably cramped. The men can't wash, don't undress, and it is so cold that the brain works slower in getting the simplest kind of messages through to the hands.

The factory ship carries a doctor because there are many injuries on one of these expeditions—cuts, broken legs, etc. But there are no colds and there is very little sickness until a supply ship comes down from Europe. The air is free of bacteria until then—when an epidemic of colds is spread by the supply ship's crew.

Radio Keeps Ships in Touch

Although there are many ships in the armada, they spread out and see nothing of each other for days at a time. They keep in touch by radio. All are equipped, too, with radar as a safeguard against icebergs.

When a whale is killed, pulled alongside the catcher boat, blown up with air to keep it afloat, and flagged with the company flag, the catcher boat rings up the factory ship to report its exact position. A buoy boat, which may be 50 miles away, is then sent to tow the whale to the factory ship.

The factory ship has a big square hole in the stern with a sloping slipway—like a tank landing craft. A pair of huge iron tongs drop over and grip the whale's tail. Then a winch pulls it up the slipway to the flensing (cutting) deck. The blubber is cut off and dropped through huge holes in the deck to the cookers.

Men Must Learn to Stand Stench

The whale is next pulled forward to another deck, where the meat is cut off and sent to the freezer ship. Then the liver, which may weigh much more than a ton and is very rich in vitamin A, comes out.

The stench of dead whale is so strong

that a factory ship can be picked out in a fog from three miles away. The odor is even worse when one of the dead whales, used as a fender between it and a 20,000 ton fuel-supply ship, blows up with its own gas and bursts.

But the men get used to all this, and they are paid by a bonus system. Not only the gunners and their picked crews but everyone, including the doctor and the firemen, can double his pay if the catch is good. The lowest-grade laborer on an expedition can earn up to \$1,400 in six months—probably twice what he would earn in England or Norway.

Hunting Season Is Limited Now

Whaling has always been profitable. But the old-time whalers, in the days when there was no control, overdid it. They fished out the arctic. Now, to make sure that the same fate does not befall the antarctic, the season and the catch is controlled by the International Whaling Commission.

Each factory ship carries an inspector to make sure the fleet does not break international regulations. Sandefjord, in Norway, is the control point. It receives a radio report on the day's catch from each whaling fleet. When the season's allotted catch has been about reached, Sandefjord radios the season's closing date.

This year the whaling season is expected to last only 75 days. Then the ships will steam north. In the future they may leave the bleak immensity of the antarctic even sooner, thanks to the adoption of electric harpoons.

Gone for Lunch

THE boys at the roundhouse observed that one of the crew was unusually glum, and asked what was bothering him.

"I think my wife is tired of me," he replied.
"What makes you think so?" inquired a marital-wise friend.

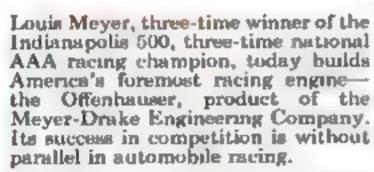

"Every day this week," he answered, "she has wrapped my lunch in a road map."—Fireman's Fund Record

"I build racing's top engine. Here's why I recommend

Champion spark plugs for your car."

June Mayer

Says Meyer, "We specify Champion Spark Plugs as standard equipment for the Offenhauser because we've never found any spark plug that can equal Champion in that extra notch of power and speed and extra dependability which you must have for championship performance Speaking from broad experience in this field, we know that all Champion Spark Plugs are built to one, single exacting standard—the best that top research, engineering and manufacturing can produce.

"Therefore, I say to every motorist, 'If you value the very best performance of which your car is capable, you'd better specify Champions for your car. In my book they're tops for every engine, and the record books prove it'."

CHAMPION SPARK PLUG COMPANY, TOLEDO 1, OKIO

FOLLOW THE EXPERTS

FOR YOUR CARL

There's nothing more satisfying than "shooting it in color" on Kodachrome Film, then staging grand color shows. On these pages you see expert Kodak miniature cameras for taking color shots . . . projectors and viewers for showing big images of the beautiful color slides you get. Let your Kodak dealer help you select a camera-and-projector "team" to fit your budget. Ask,

too, about full-color prints and enlargements from your slides.

Latest in home projection is the brilliant new Kodashide Highlux III Projector, shown above. Its 300-watt lamp, combined with a specially designed optical system including Kodak Projection Ektanon Lens, 5-inch f/3 5, gives top brilliance plus unsurpassed color purity and over-all definition. Three-way slide cooling—by baffles, a fan, and heat-absorbing glass. \$55.50 (including carry case with built-in fan).

New economy 35mm, camera—
The new Kodak Retinette Camera
is a ministure beauty. Slips into
small coat pocket. Fine three-element //4 5 lens assures sparking
color slides. Has automatic film
stop, counter, double-exposure prevention. 8 speeds to 1/300... and a
delayed-action setting. Built-in
flash "synch," Only \$59.50.

Comero—The new Kodak Retina Ha Camera with Schneider Retina-Kenon f/2 Lens and Synchro-Compur Shutter, I second to 1/500, in designed for action work in color. Single window for range finder and view finder; rapid lever-action film wind, automatic film stop; double-exposure prevention. \$164.10.

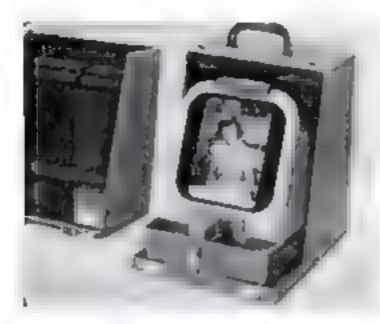

Moderate-price range-finder "miniature"—The new Kodak Signet 35 Camera features Kodak's finest lens—Ektar 1/35—for extracolor brilliance. Speeds to 1/300. Built-in range finder, flash "synch." Exclusive ball-bearing action for ultra-smooth focusing; automatic exposure counter; film stop; double-exposure prevention. \$92.50.

Kodek Pony \$28 Camera (left)—Incxpensive color camera with color-corrected Kodak Anaston f/4.5 Lens; Kodak Flash 200 Shutter. Takes 8-exposure blackand-white, Kodachrome, and Kodacolor Film. Only \$31.15.

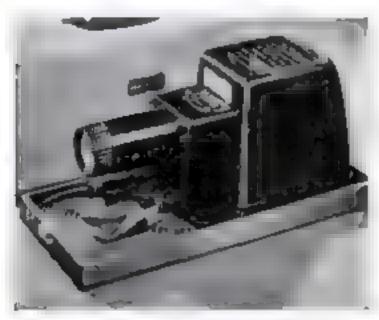

> Kodok Fony 135 Comera (right)-Makes superb color slides on Kodachrome Film. Has automatic film stop and exposure counter. Uses all Kodak 135 Films, 20 or 35 exposures. A good buy at \$35.75.

Kodasilde Table Viewer, Model A (left)-Projector. ecreen, and slide changer in a single unit. Projects brilliant images in lighted room. Takes 75 cardboard or 30 glass slides. Images appear as push-pull plunger positions slides. \$97.50.

> Kodaslide Table Viewer, 4K (right)-This budgetpriced viewer enlarges slides four times on its built-in screen. Showings are effortless, \$49.50.

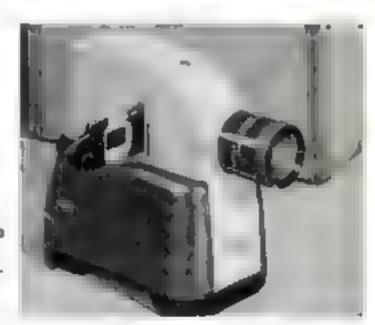

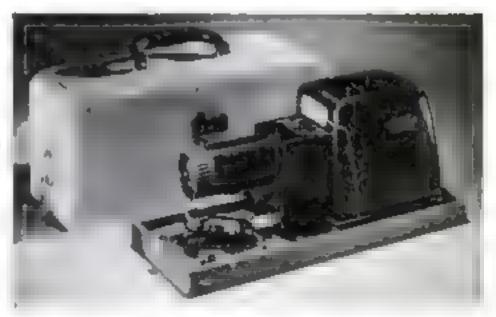

Kodaslide Morit Projector

(left)—Features improved slide-feeding mechanism on top of projector, climinating danger of jarring instrument. Includes Kodak Projection Ektanon Lena, 5-inch //3 5, \$26.10.

> Kodesilde Projecter, Master Model (right)-Fast lenses, 1000-watt lamp can deliver more light to screen than any other 2 x 2inch alide projector. Choice of 4 lenses. From \$169 00.

New Kodasiide Highligh II Projector (right)-This highly capable 200-watt projector is a companion product to the Highlux III. Features include Kodak Projection Ektanon Lens, 5-inch. f/3.5; heat-absorbing glass for slide protection. two Lumenized condensers for uniform light distribution over the picture area. If, later, you wish to convert to 300-watt screenings, you can do so very easily Simply purchase the Kodaslide Highlux Blower Case for \$19.20 and insert a 300watt lamp (extra). Price of the Highlux II, \$35.50.

You can see this equipment, and many other interesting items, at your Kodak dealer's. Stop in any time and ask for a demonstration. His professional knowledge and experience will prove valuable in helping you make a selection that will best suit your needs.

Eastman Kodak Company, Rochester 4, N. Y.

Prices subject to change without notice and include Federal Tax where applicable.

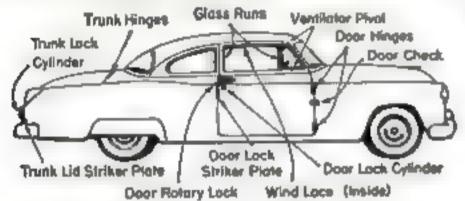

Care and Feeding of Engines BY S. P. CORP

BODIES NEED LUBRICATION, TOO

Body lubrication is necessary if you want a quiet car, because body noises are caused by dry surfaces rubbing together. To do a good job, you will require a can of light engine oil, a stick of lubricant or a grease pencil, and a tube of powdered graphite, all obtainable at any gas station or car dealer.

QUICK GUIDE TO BODY LUBRICATION

1. Refer to the diagram and apply a thin coating of graphite to all glass run channes, working glass up and down until graphite is worked in. Insert end of graphite tube into key opening of door locks, equeexing tube to force graphite into working parts, also the trunk lock.

2. Use grease pencil to apply a thin coating on door lock striker plate and trunk hid striker plate. Open doors and apply grease pencil to each weather cord, the cloth covered tube around each opening, wherever it contacts the door. Friction between weather cord and door often causes door squeaks.

OIL HINGES AND FRONT SEAT TRACKS

3. Apply light oil to all door and trunk hinges, door checks, door rotary lock, and pivots on door and window ventilators

4. Front seats are usually on tracks. A few drops of oil here will make seat move with less effort and more quietly

 When windows are hard to operate, remove door or window trim pad and apply grease to window regulators, using your grease pencil

6. Part of your body lubrication job should be a careful check to see that drain holes in the bottom of each door are open, so that rain running down the windows can find its way out. Clogged drain holes can cause doors to rust out from the inside

By following these simple instructions, you can keep the body of your car as quiet as when it was new

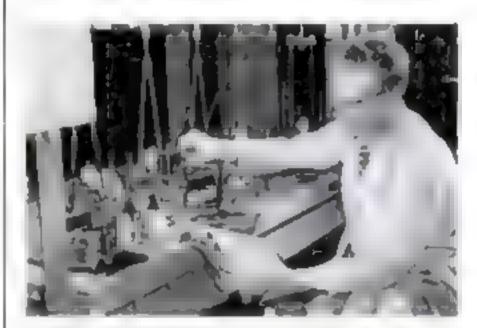

WRITE FOR FREE BOOKLET

This new booklet, "MORE POWER, Less Gas, Less Oil," tells many facts about car care, and about new Sealed Power Krome X Ring Sets, engineered to fight heat, friction, abrasion, and corrosion in late-model cars and trucks. A postal card to Sealed Power, Dept. H-1, Muskegon, Mich., will bring your free copy. It can save you real money.

Industry Clamors for Trained Men

(Continued from page 1411

were GIs with only middling high-school records who did fine work in college after the war. One submarine sailor finished high-school studies by mail between watches at sea, took college-entrance exams when he got out, and went through college with honor grades.

CIVIL ENGINEER, John H. Schmertmann. 23-year-old soil-engineering specialist, paid for almost all his professional education by part-time and summer jobs, loans and scholarships. In four years at MIT he received \$1,200 in scholarships—\$200 from the Scarsdale (N.Y.) Lions Club, the balance from Tech itself. He borrowed \$300 more from the Lions and \$1,800 from MIT, which he is now repaying at \$100 a year, Summer work-gardening and surveying-brought in \$1,850. Work in the Tech library and soil lab—seven to 10 hours a week for four years -paid him \$600 more. Another \$700 he had saved by working during high school. A \$125-a-month research assistantship paid for a year of graduate study at Northwesternand let him run a car. Schmertmann, shown above using a consolidometer to test soil samples from a factory site, is now with Moran, Proctor, Mueser and Rutledge, New York consulting foundation engineers.

For some, a hitch in the service means a chance to pick up new skills. Alphonse Peter, doing advanced work on jet propulsion at Caltech this year, was an electronics technician in the Navy. He told me that he felt that two years of travel and living away from home gave him an edge on his University of Connecticut

Experts (like you)...beginners, too...

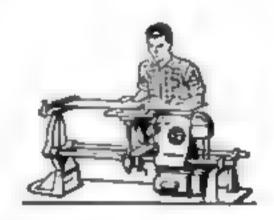

like SHOPSMITH better

than any other power tool in America!

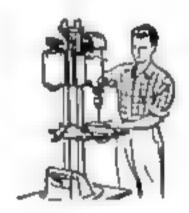

A COMPLETE Workshop!

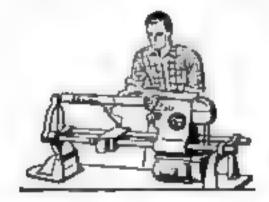

Five superior tools in the space of one!

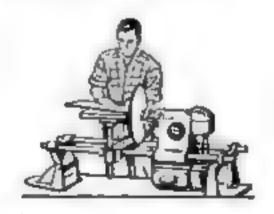

CIRCULAR SAW cross-cuts, rips, bevels or miters. Maximum depth of cut, 2 1/4. Depth regulated by built-in micro table-raising mechanism. Up to 48" between blade and fence!

DRILL PRESS drills, routs, reams, mortuses, countersinks wood, metal, plastic. Up to 27" between table and chuck. Saw fence miter gauge and tilting table provide automatic settings without special jugs.

LATHE turns wood, plastics. Extra capacity—15" swing, 33" between centers. Tool rest slides parallel to work; is quickly adjusted, locked into position for any operation, including faceplate turning.

DISC SANDER is a precision tool you'll use often. No "chatter" when beveling thin pieces. Plain and compound miter sanding. 12" sanding disc is dynamically balanced... installed instantly.

for pieces too big or awkward for vertical drill press. Length of work limited only by size of room. It's the only professional doweling tool evaluable for the home workshop.

motor, heavy-duly, J₃-hp., be I-bearing, capacitor, 110 V, 60 cycles—**\$34.56**,

Shopsmith is America's largest selling power tool because it's a real multi-purpose tool that actually outperforms most saws, sanders, drills and lathes.

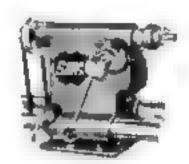

It offers hairline accuracy, tremendous capacity, important savings in money and space, and many
quality features formerly found
only in the most expensive professional tools. Shopsmith versatility
means you have the proper tool,
simplified adjustments and readymade jigs for difficult or unusual
operations, and to change from
one tool to another takes less than
60 seconds.

Shopsmith is not a makeshift onebench assortment of individual tools never designed to work together. It was designed from the beginning as a multi-purpose tool, and is timetested, rugged, practical and completely flexible. Yet its cost fits the most modest budgets. Fill out and mail the coupon today for Shopsmith's colorful 16-page booklet. It's free!

Compare SHOPSMITH quality with any other power tool!

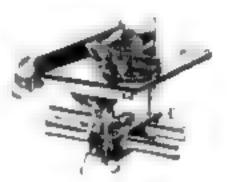

fall seafing construction, Spendle floats on four greate-scaled ball bearings. Spendle tip is induction-hardened, has reverse-tapered safety flat.

Machine 1001 Precision. All moving parts are machined to precision tolerances. Headstock and carriage slide effortlessly on the ways.

HEAVY DUTY CASTINGS. No stamped metal parts. Castings are fine-grain grey from or rigidly ribbed, top-grade aluminum alloy.

EXCEPTIONAL QUALITY THROUGHOUT. Because they are used for all major operations, parts are made with special care from top-grade materials.

Industry Clamors for Trained Men [Continued from page 246]

classmates: he knew what he wanted in college and his experience in electronics helped. He advises service before college. "A two-year hitch is about right."

Of course West Point and Annapolis provide a free engineering education, and take both enlisted men and boys straight from high school. The smaller Coast Guard Academy offers an excellent course in "general engineering." Its cadets are selected strictly by competition.

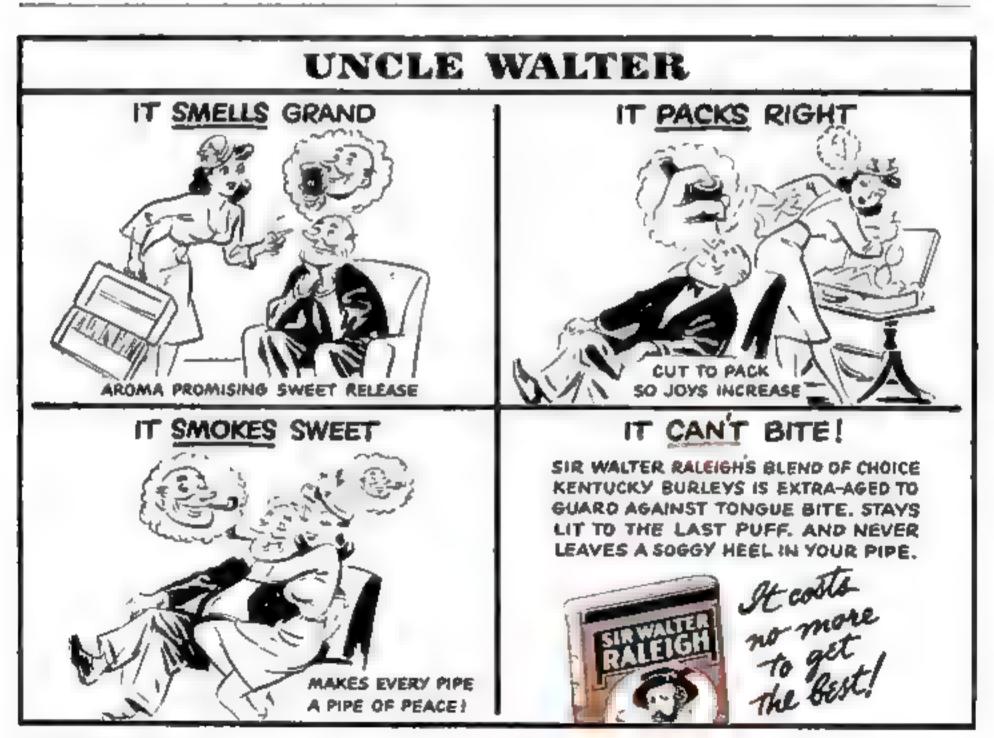

Join the Navy and Get an Education

The Navy offers another opportunity the Holloway Plan, open to both Navy enlisted men and to boys graduating from high school. If selected, you can choose any college that has a naval ROTC unit. The Navy pays your tuition and fees for the four-year course, plus an allowance of \$50 a month. This will just about cover board and room in most places. In return, you take certain courses required by the Navy and spend your summers on training cruises. You also agree to serve three years on active duty after college, plus eight in the reserve.

The colleges save jobs for students who need the money. They also hold down a man's work week so that his studies won't suffer and he has a little time for fun. MIT and Caltech, for instance, advise students to limit outside work to 10 or 12 hours a week. Carnegie Tech puts the outside limit at 15 hours. This means that a student can make about \$300 or \$400 during a college year. But at other places students work as much as 30 hours a week—and still keep up their studies. This doesn't leave much time for football, beer and dates.

Full-time summer work can be an important part of a man's education—and bring in \$300 or \$400 more besides. An engineering student can pick a plant in

Industry Clamors for Trained Men [Continued from page 258]

his field, see the industry from the inside. Sometimes summer work fits right into the next year's classes. Frederick Harshbarger, who graduated in physics from Oberlin last year, worked one summer for Preco, Inc., a small company in Los Angeles. As an inspector, he noticed that plant morale was good. He dug into why this was true, wrote up his findings at college, His essay won a \$50 prize.

Investing Money in Men.

The college deans who try to keep men from loading up on outside work know that you can't pay your whole way through college on 10 hours of work a week. They also know that for most men a college education means increased earning power. In that case, a good student is a good financial risk. Corporations borrow money to buy new machinery to increase production-why shouldn't a man do the same? A pioneer, MIT has been making long-term loans to students for 22 years. More than \$2,500,000 has been borrowed in that time by 3,600 men. About two-thirds of this has already been paid back and the younger men are sending in checks regularly. Harvard, Yale and Princeton, among others, are making more and more student loans. With a combination of scholarship, parttime work and loans, a man can make his way through almost any college or engineering school,

And by picking his college right, a man can do it on work alone. I know of a recent graduate of Ohio State who paid all his expenses after the first year by working 25 to 30 hours a week as a machine operator—later timekeeper—on a part-time shift in a local factory. He got married his junior year—and helped put his wife through school.

DREMEL MFG. CO. Dopt. 123-A, Rocing, Wis.

They're Living Off Another Planet
[Continued from page 135]

year, U. S. newspapers carried reports of mysterious objects sighted in the skies.

Up until late December, the authors kept Vana and Garry Verth on Earth. But Vana, in return for a horse-and-buggy ride, had promised Garry a ride in a flying saucer, and now the two are off. They will make an extended stopover on a space station revolving around Earth (those enterprising females beat us to the punch on that construction job) before continuing on to Terra. Once they get there, goodness knows what will happen to Garry. The girls may fall out among themselves vying for his favors or they may raid us for more men.

Editors Hesitated to Use Strip

"Twin Earths" seems so plausible that the editors of at least one large city newspaper hesitated to publish the strip. They remembered how Orson Welles had scared the daylights out of radio listeners with his realistic imitation of a Martian raid on New Jersey. They were afraid a lot of their readers would mistake the logical fantasy of "Twin Earths" for fact. So they called in their science expert for consultation.

He pointed out that Pythagoras had anticipated Lebeck by about 2,400 years. That intellectual Greek had estimated that there were 10 planets in our universe, though only five were known in his day. He called one of the unknown five Counter-Earth, and figured that it was revolving in an orbit that kept it forever hidden from us.

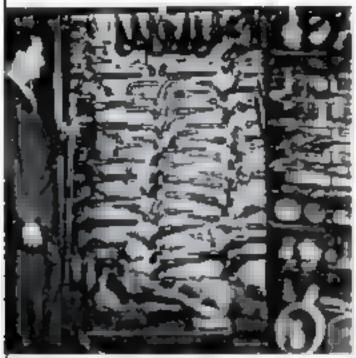

Reassured, the newspaper editors decided to take a chance on letting their readers follow the adventures of Vana and Garry Verth.

From Pillar to Pole

THE Sunday-school teacher was describing how Lot's wife looked back and suddenly turned into a pillar of salt.

"My mother looked back once while she was driving," contributed little Johnny, "and she turned into a telephone pole."—Friendly Chat.

Just lay <u>prefinished</u> Bruce oak flooring right over your old floors...no sanding or finishing

You can give your home new beauty at low cost with a prehnished Bruce Hardwood Floor. Completely finished—even waxed—at the factory, this highest quality oak flooring can be nailed right over old floors. No sanding or finishing . . . no mess or smell Ready for use as soon as laid. Made in strip or block (parquet) design.

"Scrotch Test" Finish — The Bruce factory-applied finish is baked into the pores of the wood.

The "Scratch Test" (left) will prove to you that this durable finish does not scratch or chip or mar like an ordinary floor finish.

Moderate in cost — A new Bruce Hardwood Floor will cost you less than a good rug or carpet. Easy to keep clean and beautiful, too. It's just the thing to use in fixing up or adding a room. Let your lumber dealer give you an estimate. Mail coupon below for colorful literature.

Gus Fixes Their Wagon

[Continued from page 190]

"He's pulling something! Let me slap him around! Let me slap—"

"Hold it! Try again, buster. This is your

last chance."

Gus shrugged his shoulders and fiddled with the engine aimlessly. The gunman's threat rang a bell somewhere and as he puzzled over it, he reached down with a wrench, deep beyond the glow of the lamp, and loosened some bolts.

Slap around . . . slap . . . something about the word was as familiar as a nursery rhyme, a missing ingredient, teasing at the edge of his mind.

New Points Turn the Trick

"Trying to think! Bouncing his skull on the concrete would help."

Bouncing . . . it happened again. Bouncing was a result of varying degrees of flexibility, a springmess . . . a spring . . . slap and bounce! That was it!

"Okay, move that miserable friend of yours out of my way. I think I've found

your trouble."

"It's about time!"

Gus went and got a new set of distributor points. The others had seemed all right, but actually they were what caused the car to sputter at high r.p.m. The constant flexing of the point spring over a long period of time had gradually sapped its strength until the spring failed to keep the contacts closed for the proper length of time. The spring was allowing them to slap and bounce at high r.p.m. The resultant charge of electricity reaching the plugs was too small to keep the engine running properly.

Gus Reaches the End of His Rope

It wasn't what Gus would call a common ailment. Being about the least expensive part of an engine, points were usually changed fairly regularly. But there were some home tinkerers who had the idea that clean points meant the distributor was in good order, no matter the age. Gus figured the Zephyr's owner was like that.

He installed the new set, adjusted them to the proper setting and raced the engine.

It was smooth as fine oil.

"Okay. She's fixed. Now get out of here and leave me alone!"

"With pleasure, buster, but there's one [Continued on page 258]

Runs, sets, loosens and removes nuts or studs, taps, threads, drives screws

Sleek, powerful, compact — without question this new No. 555 is the most remarkable, most versatile electric tool ever developed. For production and maintenance in factories, for garages and repair shops, for service work of all kinds — it has capabilities out of all proportion to its size.

When tarque resistance is low, it drives continuously at 1900 r.p.m. Then, it automatically shifts to impact action as the resistance increases — with 2000 blows per minute exerting up to 100 ft. lbs. tarque.

Weighs only 6% lbs. Easily contrailed with one hand. Ruggedly built for long, hard service. Quickly reversible. Write for full information on this amozing new tool that cuts time up to 90% on many jobs.

thing more-just so you won't holler copper for a while."

The two men grabbed him and trussed him up with a length of rope Gus kept in a corner. Then the one with the gun ripped the telephone off the wall and dropped it near Gus.

"Something to amuse yourself with! So long, grease apel"

The two convicts jumped in the car, backed out with a squeal of rubber and roared down the street.

Stan to the Rescue

Gus struggled with the rope, but the cons had done too good a job. He relaxed his muscles and waited. At least Stan hadn't gotten mixed up in it. Might have tried something rash, he thought. These young squirts . . . say, what's keeping that kid?

As if in answer to his thoughts, a car drove up on the concrete apron outside, and a cracked voice called out: "Hey Gus! You in there?"

"Hurry up, Stan! Get me out of these ropes. I've got to get to a phone. I'll explain later."

They drove to a drugstore a couple blocks away, and Gus ran inside. He dialed a number, and Officer Billy Ryan answered.

"This is Gus, Billy. You on the lookout for a couple of escaped cons?"

"Yeah, we been watching for 'em. Why?"

A Tip for the Cops

"Well, they've just left my garage—they're headed for Chicago. But I think you'll find them a short distance out of town on the westbound highway. Their car will break down, probably in the next 15 minutes or so. It's a black 1940 Lincoln Zephyr. You can't miss it!"

Gus could hear Ryan shouting at the dispatcher to send a car out and call the highway patrol for assistance.

"Hope you're right, Cus. But how do you

know the car will break down?"

Cus told him how he had fixed the car, and of the other "adjustment" he had made.

"Nice going, Gus. You pulled a neat trick! So long."

Gus went back to the car and drove Stan home. He told him the whole story.

It tour a neat trick. Only mechanics and a few owners of that model Zephyr would [Continued on page 260]

Gus Fixes Their Wagon [Continued from page 258]

know about it. Once, a 1940 Zephyr had come in behind a tow truck with its radiator torn to pieces, and Gus had discovered that on that model the radiator was fastened only at the bottom. Sometimes, if the bolts loosened a little, and if the car was moving fast enough against a strong wind, the radiator just leaned into the fan blades. The result was a frightening noise, loss of coolant, and an overheated engine freezing up.

"Say, that's a pretty good stunt, boss!"

"Sure, if it works and they eatch them."
He stopped in front of Stan's house

"You know, since I'm working for such a smart boss, my job is on a higher level than I thought. Don't you think I ought to have a raise?"

Gus took a playful swing at Stan as the young man jumped out of the car and said good night.

Gus Gets Some Good News

Gus had finished dinner and was settled down by the radio when the phone rang. It was Billy Ryan.

"I thought you'd be interested in how things turned out. We found the car abandoned at the edge of the road—"

"You didn't eatch them, then?"

"Wait a minute! A little girl came running up to us. She was on the way to a neighbor's after sneaking out the back of her house to get help. Said there were a couple of bad men getting ready to shoot her folks. Well, we got there just in time. They're in our little cage right now. And tomorrow they'll be heading back for the big gray walls—thanks to you, Gus."

Gus grinned and glanced down at his wrists—they were still sore from the ropes

the cons had tied him up with.

"Don't mention it, Billy," he said into the phone. "Always a pleasure to help out the law."

Next month: Gus meets a news deadline.

Put in Her Place

A round wife just learning to drive had hopelessly gotten traffic snarled up in trying to make a left turn at an intersection. Excitedly she turned to her husband and asked what to do.

"I don't know," he replied calmly, "but I'm sure if you climbed into the back seat you could figure it out."—The Right Hand,

Amaging SYNCRO SANDERS DO MORE WORK PER SQUARE INCH OF SANDING PAD SURFACE THAN SANDERS COSTING TWICE AS MUCH

In material removal tests for partable electric sanders conducted in the Syners laborators—on sout of the leading medium priced sanders on the market today—it was preven conclusively that sanders manufactured by Syncra Corporation remove more material per square (sich of sanding pad turface than sanders centing more than twice as much. The Mounties Become Mechanics [Continued from page 101]

young woman who fed one holdup man in a cubicle-like cell while her husband roamed the muskeg in search of a confederate.

Wife Holds the Fort

When the constable returned with the other criminal, I asked if he had not been worried about his wife. "No," he answered. "She's the best jailer, radio operator, car driver the force could hire."

Although the Mounties are more dependent upon mechanical equipment than ever before, an inhibition restraining the use of one particular piece of equipment still prevails from deep in the force's past. This item is the revolver. "Never fire first!" is a warning passed on to new Mounties.

In the frontier town of Prince George, where burly loggers from the pine woods and strapping jackhammer crews from the vast Kıtimat power project often come for a wild week end, I had coffee and hot cakes with a rangy constable who had broken his right hand on stubborn jaws three times in a year and a half. "But I never threatened a drunk or a bully with a gun," he assured me.

Order Without Gunplay

Does the Mounties' reluctance to shoot ever imperd their own lives? In Montreal in 1950 a bank robber killed an unarmed Mountie constable. Grim men flung a network of sharp eyes and pointed questions across the nation. Five months later the slayer was caught near Big Beaver, Sask. Within another five months he had dropped through a gallows trap door.

The late Assistant Commissioner Denny La Nauze once said to me: "A policeman who shoots first and asks afterwards will nick a friend as well as foe. A policeman whom it is positively dangerous to shoot, because retaliation will be rapid and sure, can get his commands obeyed without threats."

Despite the airplane and the motor car, troopers journeyed 48,475 miles by dog

The Mounties Become Mechanics [Continued from page 262]

sled over the tundra of the Northwest Territories in 1951. Many remote Eskimo tribes cannot be reached even with aircraft because the hummocks of ice are unsafe for landings on skis. When an Eskimo woman named Mikaeyout was rumored to have slain her busband, a Mountie constable from the Pond Inlet detachment trekked 1,500 bitterly cold miles on snowshoes to arrest her. He camped in the open when the temperature dropped to 70° below.

Wings Team with Snowshoes

Assistant Commissioner Rivett-Camac. a massive man of 50, contends that the airplane in the North should be mainly a one-way proposition if a trooper is to patrol his district efficiently. "You've got to know the trappers and the woodsmen and the natives personally or you will never really get to the bottom of the crimes and troubles in which they may be involved." he told me.

"When I was stationed at Aklavik on the Arctic Ocean," he continued, "I flew one way on patrol but I traveled by snowshoes and dog team in the other direction. I bunked with the isolated people of the wilderness and got to know them."

Autos Cover More Ground

I watched Assistant Commissioner Alan Thomas Belcher inspect the automobile fleet of K Division, which covers all of Alberta-an area nearly the size of Texas.

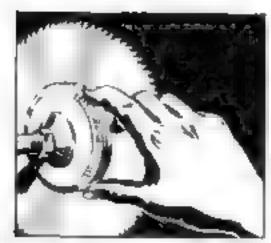

"It's not like when the cavalry column was lined up on frisky geldings and the band played Maple Leaf Forever," he said, half apologetically. "But we're a more effective organization because of automobiles. They may not have the dash and color and romance of horses, but they're many times more efficient in making the best use of our rather limited manpower."

Automobiles, airplanes and radio challenge the notion of the Mounties as a

METAL TREAT is also an excellent rust preventive and asotal pre-primer

Just rub on concentrated Metal Treat and unsightly, damaging rust comes right off automobile chrome, tools, outdoor furniture, machinery and other metal surfaces. And, before you paint any metal surface, prime it with diluted Metal Treat to

prevent rust and make paint stick (12) oz, bottle makes full gallon). If your paint or hardware dealer doesn't have Metal Treat yet, send \$1.00 (check or cash) to THE KLEAN-STRIP CO., 2364 S. Lauderdale, Memphis 6, Tenn.

A quality remover by the makers of KLEAN-STRIP

Precision Mode for Precision Work Home craftsmen will find Whiz Saw vsetul for rough cutting jabs as well as precision work. ACCEPT NO SUBSTITUTE. The Mounties Become Mechanics [Continued from page 264]

frontier force, but a few concessions to drama remain. In the vicinity of the picturesque mountain resort of Banff, one of the most famous tourist spots in the world, the troopers on everyday duty still wear their scarlet tunics.

But whether in majestic red or humdrum brown, the Mounties rely upon scientific advance wherever they canboth in relentlessly pursuing the guilty and in parceling out mercy to the innocent.

The treasurer of a Canadian city was charged with embezzlement when a sudden flash fire burned all the money in his office. Officials suspected that he had cached the funds somewhere. The man had a good reputation and the Mounties believed the charge to be false.

Clear the Innocent

The crime-detection laboratory sifted through the ashes and created anew every piece of currency of large denomination that had been in the office at the time of the fire.

The man was acquitted.

The Mounties of 1953 are convinced that more criminal cases will be decided in modern laboratories than on the bleak and windswept expanse of the Barren Lands. The microscope is replacing the carbine, as the automobile has all but replaced the horse, among the tools of the vigilant troopers who in Canada's vast realm are assigned to "uphold the right." END

Papa's Pride and Joy

THE young mother stole to the door of the nursery and watched as her husband gazed down at their baby's crib. There was an expression of wonder and admiration on his face and she could hear him mutter: "I can't get over it! I just can't get over it!"

Deeply touched, she slipped to her mate's side and put her arms around him. "A penny for your thoughts, darling," she whispered.

Startled, he blurted: "Why for the hie of me, I can't get over how I built that beautiful crib for only \$101"-Lino-Lines.

- memow-white blade with bold, legible, jet-black numerals and graduations. Graduated in 32nds for first 6 inches.
- sturdy die-cast case heavily chrome-plated, calibrated for quick reading inside and outside measurements.
- blade ½" wide made of finest high carbon steel—tempered. Bonderized—enamelled—baked.
- blade replaceable in seconds—without tools—without even. opening case. And Evans replacement blades cost for less.
- every "Evans White-Tape" is unconditionally guaranteed.
- exclusive Evans automatic brake gives smoother push-pull action with absolutely no "creeping" of tape into case.
- underside is white, too. Mark with ordinary pencil, stmove mark with flick of thumb.
- unheard-of low price*: 10-ft. \$1.49; 8-ft. \$1.19; 6-ft. 986. Prices higher in far west and Canada.

FOLEY FILED SAWS BRING NEW CUSTOMERS

Here is a steady repeat CASH business you can start in your own basement or garage in your space time. Every saw you sharpen with the muchine accuracy of the Foley Saw Filer is an ad that brings more customers. S. M. Hollingshead wrote to us: "I am doing very well with my Foley Filer, and I am glad I invested in your machinery. It is very satisfactory and works very well in the small community in which I live."

You can file all hand saws, also band and crosscut circular saws on the Foley Saw Filer, The adjustments are simple—there is no eyestrain—and you can start right away to turn out perfect cutting taws. "The first saw I sharpened with my Foley Saw Filer came out 100%. I think it is a marvel of perfection Clarence E. Parsons.

"MONEY MAKING FACTS" explains how you can get business from hardware stores, home owners, farmers, carpenters, schools, mills, factories, etc. Just think-with a modest investment, no overhead, no stock of goods to carry. you can start right in on a cash business that will help pay the rent, buy groceries, or a new car. Get the facts send coupon today for this practical, moneymaking plan. No salesman will call

Guided Missile Filter CAN NOW BE USED IN YOUR CAR!

STOP THROWING MONEY AWAY!

GOVT. APPROVED OIL FILTER ELEMENT

FULL 10 YEAR GUARANTEE!

The sensational "LIFETIME" oil filter forces all your oil through a porous

bronze filter element which never wears out. It filters out durt particles as small as 39/millionths of an inchas soon as your engine starts and allows no oil loss or by pass regardless of engine temperature. It saves the quart of oil soaked up by ordinary filter elements and does not absorb valuable, protective oil additives. "LIFETIME" pays for itself over and over by saving

oil, engine repair, and ending the expense of stock filter element replacement. Fits all cars and light trucks. To clean, just ruse the

bronze cartridge in gasoline,

THE SAVING THE

DU PONT DUCO CEMENT

AEG. U.S. PAT. OFF.

when handles come off, put 'em back on to stay with "Duco" Coment. It's a must in the tool room.

"Duco" Cement puts loose ungs in so they'll stay. Makes charts sturder.

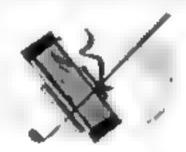

FOR THE BIRDS, Build an attractive birdhouse. You can make it strong and next with "Duco" Coment.

KEEP 8063 OUT by mending small tears in screens with strong transparent waterproof "Duco" Cement.

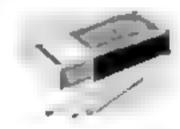

LOUSE REAR-VIEW MIRRORY It'll hold fast if you put it in its place with strong Du Pont "Duco" Cament,

LOSING YOUR ERFT Anchor loose golf-club prips with "Duco" Cement Good for tennis-rucket grips, too.

"Duco" Coment for new gripping power. Perfect for emergency repairs.

WATERPROOF MATCHES for camping trips. Dip them in emy-to-use "Duco" Coment, and wips smooth.

I've Ridden in a Flying Warehouse [Continued from page 159]

blisters in the plane's sides. Slowly Pittard backs up the plane and then awaits clearance from the tower to take off.

Off go the brakes and at 6:25 the back of your seat rushes up and slaps you with a mighty forward thrust.

At a time like this you look for reassuring facts. You remember that XC-99 once climbed easily from Travis Field lifting 160 tons, 13 more than today.

At 95 miles an hour the nose rises slightly. One long breath later the main gear breaks away. You are off and flying.

By 6:45 you are at 6,800 feet, crusing at 195 miles an hour. The engines, you learn, are now developing only 1,700 brake horsepower each. But in an emergency, her 168 cylinders would quickly unleash a total of 21,000 horsepower.

West Texas is sliding away beneath the 230-foot wing behind you. Inside that wing are 9,000 gallons of gas and 600 gallons of oil. On long-distance flights, she can stow enough fuel to carry her a third of the way around the world.

One of Its Kind

Approaching Sacramento's McClellan Field, Pittard brings XC-99 into the right-hand traffic pattern. Airspeed drops from 180 to 120 miles—slightly above stalling. XC-99 is settling gently. There is no bump, no bounce, as your glide ends.

It is no secret that while the top brass are well pleased with XC-99, they will probably never build another plane to the same specifications. Already there is talk of other models whose Gargantuan proportions would convert XC-99 into a medium cargo plane. In short, "X" stands less for "experimental" than for the unknown factor in the modern military riddle: How big is BIG?

Fly Power

Hubby: "Just look at the power in this new car-we're actually flying!"

Wife: "Yes, dear, but hadn't you better move to the side of the road so that policeman on the motorcycle can get by?"—Franklin News.

The Tested Way to Better Pay

Get into ...

PLASTIC LAMINATING ONE MAN AT HOME!

.. pays 10 to 120 profit for each dollar of cost.

Make \$20 to \$30 a day by our MAGIC MAIL PLAN . . . get

orders and cash from your mailman!

Here's the newest and most fascinating of all home-operated businesses. For the first time, a simplified machine brings the fabplous profits of Plastic Sealing and Plastic Laminating within the reach of the small operator, Can be

operated in a corner of the kitchen, basement, or garage, And any man or woman, regardless of age, education, of experience-can learn this interesting work in a few minutes of reading—can turn out professional jobs ofter one hour's practice,

No house-to-house canvassing. No faceequipment you need for the work, but even skimming the surface. To get any idea also show you exactly how to cash in big daily profits from two big demand fields.

A FORTUNE IN PLASTIC SEALING

Millions of people want to protect valuable cards, photographs, documents and papers against wear, soil, and damage. By our MAGIC MAIL Plan you get this business through the mails. Open envelopes and take out money and orders. Details of this plan will amnze you. It will be sent free, Just mail coupon.

ENDRMOUS PROFITS IN LAMINATING

A creative, artistic business. Gift shops sell your entire output, Just a few of thou-ands of giftwares illustrated on this page. Benutiful colors. Endless designs. Excuss vo. "one of a kind" appeal brings sales at ten to twenty times the cost of materials, Beautiful illustrations and instructions for making these artistic povelties gent free,

Thousands of **Beautiful Art Creations**

No one yet has been able to list the thousands of gorgeous articles that can be made by Laminating as explained in our Free Information, Just a few of these objects are

COSTUME JEWELRY CHARETTE BOXES JEWEL CASES GLOVE AND HANDKERCHIEF BOXES-CUFF LINKS NOVELTY BUTTONS -TRAY CANDLESTICKS COAST. ERS CLOCK CASES LAMP BASES PICTURE FRAMES BOOK ENDS PAPER KNIVES-KEY CHAIN CHARMS CHECKERS CHESSMEN ADVERTISING SIGNS NAME-PLATES BOOKMARKS BELT BUCKLES TIE RACKS - KEEP-SAKES OF ALL KINDS.

The opportunities in Plastic Laminating to-face selling. We not only supply the are so big that space here does not permit

kets and your place in this sensitional business you must read the details. See for your-

self how easy it is to do the work-how you can put plastic sheets into your machine and take out a fortune - how money and orders come to you in the mad -bow gift shops clamor to get more and more of your creations -how you can start with one machine and build up a big production plant with others doing the work how you can get money and business from every State in the Union—how

you can achieve independence without study or experience.

Never before has such an opportunity been offered the small, home-operator - an opportunity to gain complete personal independence in a big money business of your own. All information, fully illustrated with pictures, in free. Send the coupon or send your name on a post card. There is no charge now, or at any other time. We may be limited in the number of Warner Laminators that can be made up, so don't put this off. Send for the information on this exciting opportunity today.
